The demand for Hardwood Lumber will undoubtedly be extremely large as soon as business gets under way on a peace basis.

Production is about 50 per cent. of normal and will remain so for a year or two at least.

A few months of normal business will take every stick of dry hardwoods in the market.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

Blakeslee, Perrin & Darling

1100 Seneca Street

BUFFALO, N. Y.

An economy too large to postpone

OBERVE the big part of every cord of wood wasted where wood is barked the old way. All your wood goes into pulp when you use the barking drum pictured above.

Write today for the figures

If your mill barks wood the old-fashioned way, let our engineer tell you the actual saving our method will accomplish in your mill. It will in no way obligate you to get the facts.

TWO of these men and our barking drum will release all the rest for other work. The annual saving reaches an astonishing figure. Labor is scarce. Investigate this short-cut.

Fibre Making Processes Inc., 440 South Dearborn St. Chicago

SIMONDS

SAW STEEL PRODUCTS

In The Small Saw Mill

Here, as well as in the large mill the economical superiority of Simonds Saws is easily demonstrated. They hold their cutting edge; they saw true; they make high grading lumber. These things mean profit to any millman. Write us about the saws you want.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 39

Toronto, January 1, 1919

No. 1

Review and Preview of the Lumber Situation in General

With the close of one year and the beginning of another there are always many thoughts surging to the front, not only by reason of the historic associations and festive celebrations, but also in regard to business prospects and manufacturing outlook. With most enterprises the inventory period is now at hand and stocktaking is in progress with manufacturers, wholesalers and retailers. The situation at the present time is fraught with much interest owing to the termination of the war, the reversal of the uses to which wood has been put, the return to ordinary channels of distribution and demand and the bright perspective for export trade.

Every effort is being made by Canadian lumbermen in conjunction with the new Trade Mission at Ottawa and the Canadian Mission in London to ascertain the classification and kinds of wood products required for reconstruction purposes in the Old Land. As soon as this information is forthcoming and it is definitely known what Canada is in a position to supply, in what quantities and when deliveries can be made, as well as ocean tonnage provided, the lumber industry may expect to hear of something very much to its interest.

Much discussion is now going on with regard to the best methods of getting after export trade, how the lumbermen should come together and act as a unit, what the price prospects are for the coming season, when conditions will return to normal, what will be the extent of logging operations during the present winter, and whether prices will fall early in the summer and building operations be unusually active? So much is heard on this subject and from so many sources that it is difficult to analyze the situation and present anything like a clear, authoritative and comprehensive review. On the whole, however, a spirit of confidence prevails and there is every reason to believe that the lumber industry in Canada will enjoy during 1919 one of the best years in its history. Everything points in this direction and from information secured by the "Canada Lumberman" from different representative centres, there is only one opinion

expressed and that is, values will be maintained, at least, for several months, that woods operations this year will not be as extensive as last, when there was a general reduction of 25 to 33 1/3 per cent.

In view of the strong market that is likely to develop and the splendid foreign demand it may be asked why manufacturers are adopting a rather conservative attitude instead of branching out to the fullest extent and producing as much lumber as it is possible for their plants to turn out. There are several reasons why production will be restricted and over these the lumberman has no control. In the first place the release of labor by reason of the close of the war and the shutting down of munition plants, did not come in time to be of much practical benefit in woods operations. Generally all the cutting is done by January 1st and much of the labor was not released until early in December, whereas had such help been available in August or September a great improvement would have been witnessed in the output.

Another fact which interfered materially in the situation was the outbreak of influenza in October and November, which placed operations, in many camps, at a standstill, and drove men out of the bush by the hundreds. Several of these have never returned. This fall has been a particularly trying one by reason of incessant rains and the amount of water lying in the bush, all of which impedes cutting. Wages have shown no tendency to come down and will not likely be affected until the scale of living expenses is lowered. Many manufacturers feel that economic conditions will readjust themselves in time, but there is no disposition to interfere in the wage question at present, until clothing, rent, provisions and other supplies grow very much less in cost. The only thing that can be done is to see that the most efficient help is engaged for the wages paid, while from this out there will be a wider selection of efficient woodsmen.

The past year has been a trying one in many respects, with costs growing all the while and many other difficulties to contend with, yet the lumberman has come through it all with credit to himself. He has shown that during the war period he played his part and played it well in view of the many unusual situations which he had never encountered in the history of the industry. While the price of the finished product did not keep pace with the increasing cost of production, and the advance in lumber compared with the increase in values in all other materials was relatively small, the condition to-day is not one that should alarm. On the other hand the future is full of promise. Expansion should be the watchword and if alert and aggressive the trade as a whole should enjoy during the coming year one of the most successful and prosperous periods ever witnessed.

The Mutual Protection of Both Wholesaler and Retailer

The question of where wholesaling ends and where retailing begins and who are legitimate members in the ranks of each body will always be one that arouses a certain amount of difference. By co-operation and mutual concessions much may be done to eliminate frequent causes of irritation and misunderstanding. From the retailer is heard complaints now and then against wholesalers selling stock to certain parties who are by no means entitled to the benefit of the prices at which lumber can be purchased in carload lots. The same observation applies to shingles, lath, posts and other lines. It is generally recognized that the wholesaler is a vital and important link in the marketing of the products of the forest, that he performs a distinct service, opens up new fields of business and renders valued and timely assistance in ways that only a large concern with a highly organized selling force could plan and provide. The wholesaler is also the natural outlet for the product of the small mill man and a ready reference and friend in time of need to the manufacturer in other lines or retail lumber dealer who wants a certain line of stock and does not know where or how to get it. It is conceded that the function, service and status of a legitimate wholesaler has proved one of the best mediums in the distribution of lumber, the projection of wider fields, eliminating waste and establishing new and varied

uses for wood. It is, therefore, not pleasing to read in reports of retailers' gatherings that a few wholesalers apparently do not adequately recognize the work and worth of the retail dealer who is up against stiff competition and has to maintain a large stock, convenient premises, and render a service that is supposed to meet the needs of everyone in his section requiring anything in the building line.

Lumber is generally the only source of revenue which the retail lumber merchant has. Of course, some of them carry coal, but, generally speaking the disposing of lumber is his sole business, along, of course, with shingles, posts, doors, sash and trim. The retail lumberman does not trench upon the sphere of activity of the hardware man, the blacksmith, the miller or the wagon maker, yet these gentlemen will now and then handle a carload of posts, shingles, or put in a small stock of lumber which not infrequently is slaughtered in price. The conviction thus gains ground in the minds of some that the legitimate retail dealer is making enormous profit. Too often the men doling out these side lines do not care whether they clean up a dollar on them, as the handling of such goods possibly serves as an advertisement and develops activity in other lines. It is like the bargain counter at a departmental store or the wiping out of certain merchandise in a retail business. It is expected with these baits enough trade will be done on other commodities to offset any loss through the cut price feature in a few departments. This move is regarded as an excellent publicity plan—a service, as one blacksmith getting in a carload of shingles recently called it.

It seems to be the general opinion that a wholesaler should not sell any consumer of lumber who does not buy in full carload quantities. It is not fair to the regular retail lumber dealer who maintains a yard and office that he should be up against competition with the liveryman, the miller or the hardware merchant. He would not be if wholesalers observed the legitimate channels of distribution. Happily the complaints are few, and when local associations are formed, if the offence is repeated in any community, the trade can unite to strike the name of the offending wholesaler off the list. This will probably bring him to time. Some complaints have been investigated, and gradually the trouble, which existed to a considerable extent a couple of years ago, is being removed.

Wherever a retail dealer recognizes the wholesaler as a legitimate factor in sales and distribution surely that wholesaler, on the other hand, should take every step to protect the interests of the retailer who is just as essential in his line and equally as important a link in merchandizing. The interest of the two go hand in hand, and what injures one injures the other. It is only by unity, complete understanding and mutual concessions that the highest good of all can be achieved. The trade relations committee in connection with the Wholesale Lumber Dealers Association, is making progress, and it is understood will meet a similar committee at an early date from the Ontario Retail Lumber Dealers Association and a satisfactory adjustment of this vexed question will likely be reached.

The Proper Basis of Accounting and What it Means

The question being asked by many is what will be their profits in the lumber business in 1919. This is almost as interesting and pointed a problem as the volume of trade which will be done, the prices that will prevail and the outlook for the industry generally. With the period of readjustment more attention is given than ever to values and the cost of doing business. The lumber manufacturer will tell the wholesaler that his costs have gone up very materially since the war and are still advancing, and that operating expenses today are from ten to fifteen per cent more than during the corresponding period last year. The reason for this augmentation is the higher wages prevailing in the camps and the increase in the outlay for supplies which are bought in large quantities. Then there are added towing and driving disbursements, freight rates, costlier machinery, heavier taxes, etc. The retail lumber dealer has to face exactly the same situation. He finds that his fuel bill is much heavier, the cost of his belting and other machines ascending all the while, his taxes are excessive, while rent, cartage, insurance, business assessment and

everything else along with wages of his office staff, superintendent and foreman have been advancing month by month. It has been found impossible to keep down expenses to anything like a minimum. The consensus of opinion is that it costs the retail lumberman from 5 to 10 per cent more to do business to-day than it did a year ago. Some say that they have been able to get a price out of the finished product commensurate with rising costs. Others affirm that this has been impossible owing to the demand slackening on certain lines, and that it was necessary to keep down quotations in order to dispose of these slow-moving articles.

The "Canada Lumberman," during the coming year will devote considerable attention to the cost of doing business, the method of computing profits and other vital matters in connection with the financial problems of the lumber trade, in its various branches. We believe that a proper and efficient cost accounting system—one that is simple, comprehensive and effective—is a prime requisite in the success of any undertaking, great or small. With this object in view we present in this issue the first of what we hope will be a series of helpful and timely contributions on proper cost accounting. The special article refers particularly to woods operations, showing various accounts, forms and entries that should be used and how many economies and much overlapping and duplication may be effected by a system of accounts and the preparation of costs that will give the information desired at any time. The plan also shows the expenditures and disbursements, the cost of labor, supplies, etc., the stock of timber taken out, the men's time, outlay for wages as well as a monthly checking system. In fact, it is believed that if the system outlined by the writer is definitely and conscientiously followed, it will tell the operator practically everything that he wants to know and when, where and why.

Editorial Short Lengths

Writing to the "Canada Lumberman" an enthusiastic member of the new district branch of lumber retailers, which was recently formed at Orangeville, Ont., says that he believes the formation of local groups is a capital idea and will create a spirit of friendly co-operation among those engaged in a similar line in neighboring towns. Frequently local matters can be dealt with and a satisfactory settlement reached. These local branches will be live feeders to the provincial organization and after giving preliminary consideration to many matters can present for the deliberation of the larger body the decision which has been reached or the course that it deems best to pursue.

There is no uncertainty regarding the attitude of the pulp and paper industry, one of the leading national activities of the Dominion. It is expected that the exports this year will reach \$100,000,000, which will do much to keep Canada's trade balances on the right side. That there must be "no truck or trade" with the enemy or no half way measures pursued, the Executive Council of the Association lately passed a resolution which, in force and directness, speaks for itself. Copies of the resolution have been printed and freely distributed among allied trades.

The bulletin, which appears in red and white, and may be seen displayed prominently in offices, factories and work shops, is headed "No German-Austrian Goods Wanted Here." It reads:

Whereas the state of war existing between the British Empire and the Central Powers of Germany and Austria has demonstrated to the world the utter impossibility of reconciliation until such time as a change of mental attitude is shown towards the accepted standards of moral and commercial decency.

Be it resolved that every pulp and paper manufacturer of Canada shall be asked to refuse to purchase any goods of German or Austrian manufacture and that the strictest scrutiny shall be given to all goods stated to be of Swedish, Dutch or Swiss origin, and

Further, that every purchasing agent shall be notified of this resolution.

Be it also resolved that a copy of this resolution be forwarded to all Allied Trade Associations with the request that it receive similar attention.

Canada Must Go After Export on Big Scale

Definite Co-operative Move for British Reconstruction Requirements Must Be Launched Direct, Declares Major-General McRae in Clarion Call

Major-General A. D. McRae, Vancouver, B.C.

"Canada can get large orders from the British government but it is imperative that united, aggressive action be taken at once. Ordinary business methods and the usual channels must be radically changed and a definite, determined move made by the industry as a whole. The Canadian manufacturers must unite and state positively what they can supply in the way of the products of the forest and set forth in detail the grades, dimensions and quantities. There should not be a moment's delay, as so-called neutral countries, such as Norway, Sweden and Finland, which are situated close to the British Isles, are already negotiating for the lumber requirements for the reconstruction of Europe.

"There must be co-operation and unity between all the provinces of the Dominion in furnishing building materials for the Mother Country in the great reconstruction programme, and the business should be done on a unit basis, through the federal authorities at Ottawa. I cannot emphasize this point too strongly. The lumber yards of Great Britain are drained practically dry and a great future awaits the lumber industry of Canada in the matter of export business, but to 'cash in' on this demand requires something much more than isolated effort, the sending of special trade representatives or the customary negotiations," declared Major-General A. D. McRae, who was in Toronto recently after being overseas for several years, in an interview with the "Canada Lumberman."

Major-General McRae was former Quartermaster-General of the Canadian forces and recently chief of staff under Lord Beaverbrook on the British Ministry of Information. He has resigned from the army and is once more in mufti and will spend the winter in Mexico. Major-General McRae is former vice-president and general manager of the Canadian Western Lumber Company, Fraser Mills, B.C., in which organization he is still largely interested. The Fraser Mills are the biggest in the British Empire and as a lumberman Major-General McRae speaks with knowledge and authority, broadened by his long overseas experience and close observation of conditions abroad.

The Field Marshal of Canadian Industry

Continuing he said: "The Minister of Trade and Commerce for Canada must be the field marshal of industry for the Dominion, and must have the capacity to fill that position. The lumber manufacturers of this country should get together without the loss of a moment and advise just how much lumber they can supply the Old Country. Then the order must be placed through the Government Trade Board at Ottawa direct with the Imperial Government. Owing to the splendid part played by Canada in the war and the achievements of her soldier sons on the field of battle, there is every disposition on the part of the Imperial authorities to favor the Dominion at the present time.

"Where the individual deals direct with reconstruction orders, there will be much uncertainty as to his getting the required tonnage, but where the business is placed by our Government direct with the Imperial Government, the latter will naturally see that tonnage is provided for their reconstruction materials, and in this way, Canada will get a preference as regards tonnage for all her exports, which is of the utmost importance for the next two years at least.

"The main thing, as I have already stated, is for the lumber manufacturers to get together. Let us say, for instance, that they can supply a billion feet of lumber for export during the coming year and the same quantity the year following. Of this amount the West might agree to furnish three or four hundred million feet, and the other provinces the remainder. An agreement should be reached as to standard sizes, grades and kinds, care being taken by Western interests so that as large a percentage of the log as possible may be

used. The amount which each firm or section can provide should be definitely known to the Trade Mission which is being formed at Ottawa to act in conjunction with the Canadian Mission in London.

Coping with the Period of Reconstruction

"The question of available quantities positively settled, Canada can then go to the Imperial Government and put the facts clearly before them and ask for these orders as being essential in successfully coping with the period of reconstruction in this country. In my judgment the Imperial Government is prepared in connection with reconstruction orders to take, under the mantle of Imperialism, her Dominions to the extent to which they may be able to supply her requirements, and while this would not be termed a preference, in reality it would be a preference of the most pronounced and material kind, and when once established may form a precedent which may be of inestimable value to our industry."

"Individually, it is impossible to compete with other countries, but collectively our lumber manufacturers can be successful. The need is great, both in regard to the stock desired for the housing plans abroad and for proceeding about this business on a thorough, national basis."

"Look at the manner in which contracts for munitions have been placed in the Dominion for the British Government through the agency and activities of the Imperial Munitions Board. There has been no friction and no misunderstanding and millions have been expended. Each firm that was in a position to cater successfully to the requirements of the situation received its proportion. Now let the process be reversed and Canadian lumber manufacturers act unitedly and co-operatively, on a basis of mutual understanding, through the Trade Mission at Ottawa in all negotiations with the Imperial authorities. The time is ripe for action. We cannot sit down and let the developments of the future dictate what shall be our course and policy in this important matter."

Deal Direct with Imperial Authorities

"The Canadian Government through its Prime Minister should deal direct with the British Premier as to Canada's needs and the part of Britain's reconstruction requirements which Canada is in a position to supply and point out that this business is necessary to enable us to successfully meet the abnormal conditions which we must face in the next two years owing to our prolonged anticipation in the war. It remains for our government to push for and establish with Great Britain the principle that British reconstruction requirements should be placed within the Empire so far as the Dominions are able to supply them.

"Every effort should be made at standardization, and if this is done, I firmly believe that Canada will secure not only all that she asks in the way of supplying lumber for the great housing schemes in the Old Land, but also for doors, sash, windows, and interior trim, which will prove a great boon to the woodworking industries of the Dominion. A trade preference, about which so much has been heard, will, in all likelihood, come later on, but just now the chief problem to be met and solved is proceeding in the matter of getting foreign business on the plan that I have outlined. All questions of special representatives, dealing through timber brokers, commission men and heads of departments must be thrown to the wind. Other countries are awake, as I have stated, and, unless the Canadian manufacturers of lumber are prepared to co-operate at this juncture and put the issue squarely before the British Government and a clear cut, specific understanding arrived at, Canada will, notwithstanding the prestige and pre-eminence which she now enjoys in Imperial circles, find herself out in the cold."

Other Countries are Hard at Work

The business will be placed through the usual departments and will revert to the well established and strongly reinforced pre-war channels, in which event so-called neutral countries and the United States will get the great bulk of it unless we are aggressive. It will be readily appreciated that the lumber firms and brokers representing the lumber interests of the nearby neutral countries are not asleep, but are hard at work and fully expect to offset the preferential desire which Great Britain has for the commodities from her Dominions, by a lower price in dollars and cents, which their close proximity to the markets of Great Britain, with the resulting economy in tonnage, enables them to make.

"We have to anticipate the requirements of the reconstruction

period and find out what our ability is, and then our Government should apply for the job and rest assured, we will get it. We need big, business administration. I have had exhaustive conferences with many British industrial men, and they all say there are plenty of contracts for us if we go about this undertaking in the right way. Britain will be our principal buyer and desires to purchase standard lines in large blocks. The officials who negotiate the Canadian business must be men with authority, intelligence and high standing, backed up by a knowledge of what we have and can supply."

The Arrangement of Financial Matters

"We should carry on our negotiations with Great Britain and let her supply the requirements of France and Belgium, as she undoubtedly will, and our government could no doubt easily arrange any financial matters which might be necessary in connection with our exports to the Motherland. Personally, I think so far as the lumber business is concerned, Great Britain's requirements for the next two years will be more than Canada can supply, but let us 'grab it all' to the extent that we can, and, if their requirements are not sufficient, undoubtedly the needs of France and Belgium can be utilized to some extent, although I am inclined to think we can let the United States and neutrals have the other European requirements, which will be on

a competitive basis. The idea that manufacturers have no cause to worry and that there will be more than enough orders to go around is the greatest folly. The capacity of United States plants alone could supply European requirements."

The Day of Small Matters is Over

Concluding, Major-General M. Rae declared that this is not the day for small deals, close competition and petty misunderstandings; that the Dominions have shared in common with Great Britain the sacrifices of war and now the people of Great Britain are only too willing to show the Dominions such consideration as is necessary to enable them to successfully carry on during the period of reconstruction which is at hand."

"As for the lumber business, an opportunity is presented such as only the war could make possible. We can lift British requirements entirely out of the hands of the wholesalers and brokers who, in the past, have placed the trade (almost entirely) in every portion of the world except the Dominions. Let us supply British requirements so far as we are able for the next two years, and thus firmly established in the markets of Europe, we have reason to hope for further exports of Canadian lumber on a greatly enlarged scale."

"Something Overlooked" in the Peace Terms

Major Streight Who Is Leading Retail Lumberman and Military Man Would Have All Silent Guns in Germany Removed--No "Object Lessons" Left

Major J. E. L. Streight, Islington, Ont.

Major J. E. L. Streight, lumber merchant of Islington, Ont., who captained the first 200 men leaving Toronto at the outbreak of the war, and was for three years a prisoner in Germany, knows the temper, treachery, conceit, selfishness and meanness of the Hun as only those do who have suffered from bitter experience and direct contact.

At the banquet tendered the members of the Ontario Retail Lumber Dealers' Association, held at Toronto in September last, Major Streight, who was taken captive after the battle of St. Julien, thrilled his hearers with the recital of the diabolical treatment which he and other Canadians received.

Major Streight is an enthusiastic member of the O. R. L. D. A., and is as aggressive and en-

ergetic in business as in matters military. He believes that unless the coming peace conference changes the morals of Germany it will have failed in its ultimate objective. The guns now displayed in the public squares and parks of Germany, which once belonged to Britain and France in this and previous wars, should be entirely removed and made a term in the final peace treaty, so that the youth of that country may not be "inspired" by the presence of these relics or have their imagination or ambition any longer stirred by the past associations, achievements or deeds of their sires or grandsires.

On this point Major Streight writes:

Kill German Arrogance and Falsehood

The coming together of delegates from the Allied Nations, about the peace table at Versailles, is bound to be one of the most momentous happenings of all time.

The rulings of this peace conference may change the map of the world, but unless the rulings and the results combine to change the morals of the world—beginning with Germany—the peace conference will have failed in its ultimate objective.

The demands so far made upon Germany by the Allies are so spectacular and bulk so largely against a possibility of her ever again becoming a world menace that we forget that in the mere material shearing of Germany we shall not have clipped therewith her spirit unless we snip deep into that whereon her spirit grows—German arrogance and falsehood.

For example: There are scattered throughout Germany to-day guns which once belonged to Britain and France, in this or previous wars. These guns are displayed in prominent squares and the public

parks and no German long-range gun was ever more dangerous to Paris than are these silent guns of our Allies in the land of the enemy. Their silent appeal to the German youth, bred for generations to militarism, could not foster forgetfulness in the generations to come.

But these trophies are not there as silent reminders of the fatherland's victories—real or so-called—they are made to speak, and that most forcibly. It is part of the German "youngsters' education to be taken to these relics by trained instructors who explain to them from a German point of view—always a German point of view—how such hated relics come to have a place in the great fatherland.

During the early years of this war, when "Gott strafe England" was the common voice—we cannot say "prayer"—of Germany, England was the most hated of Germany's enemies. To juvenile Germany these object lessons were explained somewhat as follows:

"Behold, young Germany, the cannon with which our enemy tried to kill us! But the Almighty fights on the side of the great fatherland and He has willed that the arrogant nations of the earth who seek to make war with us, a peace-loving people, **they must perish forever from before our face.** Gott strafe England!" And young Germany, quick to learn, piously responds, "Gott strafe England," and there is taught him that first lesson in falsehood and hatred which later, had the war lasted long enough, would have blossomed into further atrocities such as have already shocked the world.

Perhaps another lesson would be something like this: 'Behold, you sons of this great fatherland, how the greedy English were jealous of our growing power on land and sea! For do we not spread through all lands and over (he meant 'under') all waters? Is our flag not the flag of power unmatched, and could we not eat up these English dogs, were we not such a peace-loving people? But when provoked too far, even our great fatherland must fight, and Gott mit uns, we are going to win. Yes, we have already won. See these guns, they do not lie. How else could they rest in the great fatherland, did we not have bigger guns and better guns than the piggish English, and if 'Gott' was not on our side?"

Maybe it is a French gun. "The French! Nein! They are but a feeble folk and would long ago have been licked up as the dust before our valiant armies but for those beastly English—Gott strafe England! The great fatherland has eaten up his enemies once. See? Let the guns speak—'We are the guns which fought against the great fatherland in 1870, but we could not hope to stand against invincible might; and soon there will be other guns coming from the French front to join us, for France can never hope to win against this stretching giant, Germany!' Yes, children of Germany, Germany IS stretching herself, not because she wants to, but because she is forced to it; and when she does—God pity England and France."

The "object lessons," so-called in Germany, do not so far come under any clause of the Peace Treaty and yet, to take Germany's ships and Germany's freight cars, Germany's money and Germany's guns, and leave in Germany these guns—"object lessons"—relics of this or other wars, is like trying to cure a cancer by treating the surface indications rather than by eradicating the roots.

Lumbermen Oppose Railway Demands

Wholesalers Aroused Over Extra Exactions by Carrying Companies—Lists of Unsold Stocks will be Compiled and may be Exchanged

The monthly meeting of the Wholesale Lumber Dealers' Association, Incorporated, was held at the Albany Club, Toronto, on Friday, December 13th, and was one of the most interesting and best attended meetings which the Association has held. Mr. A. E. Clark occupied the chair, and there were also present at the meeting, Mr. O. C. Beale, of Australia, past president of the Associated Chamber of Manufacturers of Australia, and vice-president of the British Imperial Manufacturers' Organization; and Mr. Hugh. Macdonald, Assistant Secretary of the Canadian Manufacturers' Association.

A number of important matters were dealt with by the members. One of these grew out of an announcement by the Chairman that the Canadian railways had applied to the Board of Railway Commissioners for Canada for permission to increase the stop-off charge in connection with shipments of lumber from 1c per hundred pounds with a minimum of \$5.00 per car, to 2c per hundred pounds with a minimum of \$8.00 per car. The Chairman reported that the Canadian Lumbermen's Association had already passed a strong resolution opposing the proposed increase.

On motion of Mr. W. J. Lovering, seconded by Mr. E. A. Gordon, it was carried that the Transportation Committee should be instructed to take immediate steps to oppose this application on the part of the railway companies.

More Exactions by the Railways

The chairman also reported that his firm was being charged \$3.00 each for reconsignment of cars billed to his firm and released to customers within the same terminal as that to which they were billed. This matter was also referred to the Transportation Committee.

A long discussion followed in regard to "Circular No. 86," issued by the Canadian Railway War Board, effective January 1st, 1919, cancelling credit accommodations in connection with freight transportation charges, by railways operating in Canada, and placing them upon a cash basis. The members expressed their indignation in connection with this matter, several of them pointing out that the Canadian Railway War Board consisted entirely of representatives of the railway companies, and that now the war was over, there was no excuse for permitting them to carry out such drastic measures.

Finally, on motion of Mr. W. C. Laidlaw, seconded by Mr. C. W. Wilkinson, it was carried:—

"That Circular No. 86 issued by the Canadian Railway War Board, effective January 1st, 1919, is of such a drastic and arbitrary character that, if it is allowed to be operative, serious hardships will fall upon the shippers—We therefore ask the Dominion Government to suspend it—That a copy of this resolution be sent to the Canadian Railway War Board, The Dominion Government and the Canadian Lumbermen's Association."

One of the important objections to this enactment by the Canadian Railway War Board, which was pointed out by the Chairman, is the fact that it works a distinct hardship upon wholesalers, not only curtailing their credits, but almost compelling them to have the manufacturers; from whom they buy, ship the stock direct to the customer; in other words, divulges the names of the wholesalers' customers to the men from whom they purchase.

Benefits of Canadian Trade Commission

The recent creation of the Canadian Trade Commission, to deal with trade problems arising since the return of peace was discussed by the members and received their unanimous approval. On motion of Mr. W. C. Laidlaw, seconded by Mr. W. J. Lovering, the following resolution was carried in connection with this matter:—

"We, the Wholesale Lumber Dealers' Association, Incorporated, this day assembled, do recognize the benefits to accrue to this country through the appointment of the new trade commission, and do hereby tender you our services and any assistance we can render."

Mr. C. W. Wilkinson, Chairman of the Membership Committee, reported that the Seaman, Kent Company, Limited, formerly of Meaford, Ont., whose head office has been moved to Toronto, had joined the Association since its last meeting. Mr. W. J. Lovering also reported that the Fesserton Timber Company, Limited, Toronto, had asked him to place their name before the Association for membership.

On motion of Mr. Frank Oliver, seconded by Mr. H. A. Hamilton, the Secretary was instructed to send a letter of condolence to Messrs. J. P. Johnson & Son, Toronto, in connection with the recent death of Mrs. J. P. Johnson. The Secretary was also instructed to send a re-

membrance in the form of flowers to Mr. John Donogh, Toronto, who has been confined to his home with ill health for several months.

The Listing of All Unsold Stocks

An interesting discussion took place in regard to a proposal to list with the Secretary all unsold stocks owned by members of the Association. It was felt that some plan of this nature should be worked out, and finally, a motion was presented by Mr. H. G. McDermid, seconded by Mr. A. E. Gordon and carried, that the members should send to the Secretary once a month a list of all their unsold stocks and that the Secretary should compile from these reports a general report showing totals of the various dimensions and classifications of stock, copies of which are to be furnished to each member submitting a report. The working out of this plan was left in the hands of a committee, appointed by the Chairman, consisting of Messrs. C. W. Wilkinson, A. C. Manbert, and A. E. Eckardt. It was also decided that the Secretary should write to the Mountain Lumber Manufacturers' Association of British Columbia and the British Columbia Lumber & Shingle Manufacturers' Association, asking these associations if they will consent to exchange stock lists with the Wholesale Lumber Dealers' Association.

Do Wholesalers Sell to Contractors?

A letter from a prominent Ontario retail lumber dealer was read by the Chairman, in which complaint was made about wholesalers selling to large contractors. The retailer asked the Wholesale Association to discuss the matter and endeavor to work out something in the form of a definition of legitimate lines of trade for a wholesale lumber dealer. After a discussion of this subject it was submitted to the Trade Relations Committee with instructions that they give it their attention and be prepared to meet a committee of the Ontario Retail Lumber Dealers' Association, who may be appointed to deal with the same matter, on a date to be fixed by the Secretary.

Mr. W. C. Laidlaw, Chairman of the Committee on the Cost of Conducting a Wholesale Lumber Business, reported that his committee had discussed the matter and had found that, on account of the varied classes of wholesale lumber business into which the general trade could be subdivided, it was impractical to attempt to draw up a definite report upon the cost of doing business. He substantiated this by reference to an extensive report upon the situation in the United States, showing how greatly the cost of doing business varied, not only between different kinds of firms, but also from year to year. Under these conditions he stated that his committee found it impossible to comply with the purpose for which they had been formed.

Export Lumber Business Will be Large

Mr. Frank Kent, of the Seaman, Kent Co., Ltd., was introduced to the meeting as a new member of the Association, and addressed the members briefly. He reported that the headquarters of his firm were being moved from Meaford, Ont., to Toronto, Ont. Speaking of the trade situation he remarked upon the many difficulties which had been met with during the war, but felt satisfied that greatly improved business conditions were now about to develop, particularly in connection with the demand for lumber in the Old Country. His firm had had good business connections in the Old Country in the pre-war days, and they had recently had correspondence with some of these concerns. He was convinced, as a result of this correspondence, that the amount of export trade to be developed was undoubtedly enormous. He had seen it reported that in Scotland alone they required, and were planning to build, 500,000 houses. The British Government was also planning to build houses on an enormous scale. They would have to have a little patience, but there was no doubt that in three or four months a lot of the new business created by the reconstruction necessities of Europe would be coming out. He urged the members of the Association to do everything in their power to be prepared for the great trade development which would then result.

What British Nation Stands For

Mr. O. C. Beale, of Australia, delivered an exceptionally inspiring and interesting address, chiefly devoted to a consideration of the wonderful ideals and successes of the British Nation. Mr. Beale was on his way across the Pacific Ocean between Australia and Canada when the war broke out, and he is now on his way back to Australia. He told an interesting tale of the events on board ship when coming to

Canada in the early days of the war, when there was danger of an attack by German commerce raiders. He also gave interesting reminiscences of the conditions in Great Britain and Europe at the close of the Franco-Prussian war in 1871. The destruction at that time was on a very considerable scale, though, of course, nothing whatever compared to that resulting from the recent war. He recalled very clearly the state of commerce existing after 1871. There had been a great boom in business and it had been practically impossible to obtain building materials. He had no doubt at all that similar conditions would prevail in the lumber trade to-day. When the full demand made itself felt, the prices of building materials would go "right into the air." Not only building materials, but many other lines would be similarly affected. One such line would be window glass, which, he believed, would be hopelessly in arrear of the demand, but first and foremost would be the demand for lumber.

The Guarding of "Key Industries"

A side light upon the situation was afforded by the case of the large munition plants in England, the Vickers plant for instance, with its enormous number of lathes for turning shells and machining materials would be largely turned over to the work of turning out materials which will be necessary for construction work. In conclusion, Mr. Beale referred particularly to the necessity for guarding those industries which were related to important "key" materials, that is to say, materials which were the key or foundation of industrial progress in any important industry. It was essential for the future progress of the world that such key materials should not go into the hands of private individuals or corporations. Moreover, the exploitation of such materials was in itself a very large problem for the governments to handle. It was apparent, therefore, that a great necessity existed for the creation of mercantile and industrial organizations, such for instance, as the Wholesale Lumber Dealers' Association, which could assist the governments in all their efforts to improve the general industrial and commercial situation.

Preparing to Meet Peace Problems

Mr. Hugh Macdonald, Assistant Secretary of the Canadian Manufacturers' Association, also addressed the meeting, giving an interesting outline of the assistance which the Association had already given to the Canadian Government in preparing to meet the problems developing with the return of peace. The Association had drawn up many definite and practical recommendations, in advance of the signing of the armistice, and had submitted them to the government so that when peace came many of these plans were already well developed and ready to be put into effect.

The annual meeting of the Association will be held on Friday, January 10th.

Canada Can Supply Europe With Lumber

Few men in the Canadian army have earned a more deserved promotion than Brig.-Gen. J. B. White, Director Canadian Forestry operations in France, writes F. H. Blacklock, of London, Eng., who is the correspondent of several Canadian daily papers. For efficiency this corps is unexcelled among the auxiliary services in the Canadian overseas forces. One cannot make reference to Gen. White without associating with him Gen. Jack Stewart, director general of railway construction in France. These two men are so similar in their shunning of publicity, their organizing ability, and the success of their work. Both had a thorough training in the work to which the fortunes of war directed their efforts. One a great railway builder, the other an experienced lumberman, they put into their military careers the same energy and thoroughness that brought them into prominence in civil life. After nearly a year's residence here, mingling with the army in France, the Canadian forces in England, with the French people and English officials it can be said that not one word derogatory to either of these great Canadians has been heard. On the other hand, all speak of their great work, and this success has not given rise to jealousy on the part of those less successful. This in itself, in abnormal times, when men are ambitious and critical, is a wonderful testimonial to the appreciation in which the commanders of the two great Canadian auxiliary corps are held in Europe. They knew their work, and knew the men capable of doing it, they played no favorites and won through with credit to themselves, with the enthusiastic loyalty of their corps, and to the honor of the Dominion. Both are intense Canadians, jealous of Canada's honor and reputation, and they inspired their men with the same sentiment. In the army in the field they are held in the same esteem as the senior commanders. Gen. White is returning home, his task in Europe has been completed. Gen. Stewart will probably follow shortly as the day of chasing Huns by Canadian-built railways is over. They have done a great work in Europe, they will do still more for Canada at home.

At a dinner recently to Brigadier-General McDougall, of the Forestry Corps, Sir Albert Stanley, President of the Board of Trade,

urged that Canada put forth every effort to meet the timber demand in England, France and Belgium. He frankly stated that during the war the European neutral nations had bled the allies to the last cent for timber and were preparing to reap a further harvest in the reconstruction period by a combination to maintain war prices. It has been pointed out to Sir Albert by Canadian lumbermen here that Canada can supply the whole requirements, is prepared to do so, and all that is required is to place the orders there. At present Norway, Sweden and Finland have the advantage of short haul and cheap labor. Canadians can compete with them, but to assure the required supply, orders should be placed in Canada now for a period extending over two or three years. There is a possibility that the Northern European forests have been considerably depleted during the past four years and the supply from these will not be forthcoming as in the past. However, Canadians feel they have earned the right to preferential treatment over European neutral nations and the allies are in duty bound to place orders as far as possible in Canada. Over twenty thousand Canadian lumbermen now in service here will shortly be released and can be utilized at home if the British Government is sincere in its expressed desire to give the lumber trade to Canada that formerly went to countries who during the war were more assistance to Germany than to the allies.

British Columbia Going After Export

Hon. T. D. Pattullo, Minister of Lands for British Columbia, recently returned to the west after a visit to Ottawa and other points east. He took up with the Minister of Marine the question of securing a number of vessels of the Imperial Munitions Board to carry lumber cargoes to Great Britain, and has received assurances that the Dominion Government will use every effort in conjunction with the Imperial authorities to ensure transportation of such timber as the Imperial authorities may buy. Mr. Pattullo reports that the revenue of the lumber industry of the province during the past year will be ahead of the estimates by at least \$250,000 and perhaps more. The revenue during October was the highest since 1913.

With respect to the pulp industry, the Minister of Lands said:

"We are now taking stock of the pulp resources of the province with a view of interesting more capital in the pulp industry and look for a great increase to come in that industry. With a large number of former members of the forestry and survey departments about to return from overseas to resume their governmental duties a great increase in that work is expected. Most of these men have been receiving from the government the difference between their military and civil pay while overseas, but provision must be made for their return to field work. The surveyor-general's staff will be quite doubled as a result of demobilization.

"The greatest difficulty which British Columbia has to face in competing for the lumber market in Great Britain," he added, "is that we have a long haul as compared with the short haul from Archangel and the Baltic. In the Scandinavian Peninsula, too, the lumbermen had been accumulating great stocks during the war, there being about four billion feet of lumber awaiting the end of the war for export.

"I am advised," he continued, "that price enters very greatly into the calculations of the European lumber buyer. Instead of working out scientific data as to the breaking strains and qualities of different woods, wood is just wood to him, and he buys accordingly. One of the mistakes we have made in our export trade in the past has probably been that we sent only the very best qualities abroad, and hampered our own mills by having a surplus of common stock. We must export more of the log than we have done. We are told that the European buyers want more than large timbers, and Mr. Beale has been directing his efforts to opening up markets for our common varieties of lumber as well as for the choice finish qualities."

Mr. Pattullo stated that in his efforts to secure guarantees of shipping to handle the export orders, he had wired Hon. Mr. Ballantyne, at Ottawa, pledging himself to provide the cargoes if the minister would provide the ships. "I was glad to see next day," he said, "that the minister of marine told an audience of eastern manufacturers that he would provide the ships if they would provide the cargoes." One request made by Hon. Mr. Pattullo is that every one of the Imperial Munition Board steamers leaving British Columbia for England be instructed to load a cargo of lumber.

"If we get the proper assistance from the Dominion and British shipping authorities our lumber mills can have immediate export business. Actual business is in plain sight. The governments and the lumbermen must co-operate if we are to build up a big export trade for our lumber," said the minister.

In regard to Australia, South Africa and the Orient, Mr. Pattullo stated that extensive markets awaited there. So far the Washington and Oregon lumbermen had dominated that market owing largely to the fact that the lumber interests there have pooled their efforts to secure a fleet of vessels.

More Business for the Retail Lumberman

The Yardman Who Desires to Capture His Share of Trade in Approaching Building Activity Should Do Some Effective Advertising—Plan Wisely for Future

Every business, whether of a manufacturing, wholesale or retail character, is at this particular time looking forward with more than ordinary interest to the outcome of the coming year's volume of trade. The reason for this unusual activity in the development of the future is occasioned by the cessation of the war, the gradual return of affairs in general to a normal state and the restoration of conditions to the as-you-were basis of the early days of 1914, before the natural course of events was disturbed by the European combat. During the period of reconstruction and expansion there is every reason to believe that the retail lumberman will, if he is alert and aggressive, share in the in the prosperity that everyone feels is not very far distant. One of the quickest and most effective ways of getting business and still more business is by going energetically after it.

It is true that a certain amount may float in by reason of long establishment, personal connection, and past associations. There is a fair proportion which everyone receives no matter how many start up, but that will not satisfy the live wire yardman. If it is the intention to build on a solid foundation and to grow larger with each succeeding year, it is necessary for him to take every means possible to attract attention to the stock and facilities which he possesses and back up quality, service and merchandising methods by a well directed campaign of publicity. Arguments are heard that, during dull times, one should not spend money very liberally in advertising for the simple reason that no trade is being done. By a strange analogy the same persons who proclaim that advertising is really not necessary and unprofitable in quiet periods will, when solicited for business by the daily and weekly newspapers, during a season of unusual activity, declare that there is no need for spending money in printers' ink as "they have all the business they can attend to," "could not fill any more orders," "are operating now to capacity, etc." It is often difficult to convince either of these classes of merchants of the wisdom, economy and advisability of advertising year in and year out, whether times are good, bad or indifferent. A man does not take down his sign, move into a smaller office or show other outward evidences of lack of confidence during the days when trade is limited, yet the self same individual thinks that he can get along fairly well without spending any money in advertising.

Keeping Up The Good Work.

There are two periods when the retail lumberman should enlarge his usual publicity appropriation and these are during the months of stagnation and in eras of prosperity when building is on the boom and new structures are being reared everywhere. It is an old saying that "nothing succeeds like success" and the more attention given by the yardman to advertising in the weeks of structural activity, the better results he is going to secure and the more money will he make. Shorn of all pretence, most men are primarily in the retail business to make a living and to show a satisfactory profit on investment and operation. They are not carrying large stocks, keeping up an expensive equipment, office and yard staff, putting in long hours and running a service which is of benefit to the community, just for the sake of passing the time or inducing the circulation of the blood. Therefore, when a man is in business he might as well be in it for all he is worth and the larger volume he can command, the more he will clean up providing he sells his goods at a profit, has a well assorted stock and knows the cost of doing business so that he can properly establish the selling value of his lumber, lath, shingles, posts, interior trim, flooring, etc.

Too few retail lumbermen advertise. They seem to think that their's is a business of necessity and if people require anything in their line they will come to them in any event. Apparently they do not realize that there is such a thing as arousing desire and stimulating interest, thus creating in the minds of many people the wish to carry out long contemplated improvements, make certain additions or erect new homes. In the rural districts there are all sorts of farm buildings that the average yeoman knows that he requires, but he lets matters slide along from day to day, postponing action simply because his attention is not called pertinently and forcibly to the fact that he should buy material now; that it would be a great convenience to have such a building erected; that advice and assistance, plans and estimates will be furnished by the retail lumberman and there is really no valid reason for deferring any project as times are now good and, with the brisk

reconstruction period following the war, any expenditure is fully justified.

Stimulating Action and Effort.

A great many people in the country have been telling the yardman that when the war was over they were going to lay hardwood floors, erect a new verandah, put up a portico, summer house or outdoor balcony. The male member of the household has possibly been informing his friends that he proposed to erect a garage, a chicken house, a tool house, silo, implement shed or other outdoor conveniences. These people have had all this and more in mind. The object of all retail lumber advertising at the present juncture should be to induce these "prospects" to convert their thoughts into action. Timely and effective advertising, a few personal visits, interviews, and illustrated booklets will result in retail lumbermen getting a great deal of these undertakings carried out if his efforts are rightly guided and properly followed up. His advertising should, of course, be backed up by the proper service, stock and delivery system.

One of the liveliest concerns in attractive publicity is the R. E. Butler Lumber Company, of Woodstock, Ont., who thoroughly believe every dollar expended in the daily and weekly papers amply repays them. Mr. P. L. Canfield, of that firm, has devoted not a little attention to this end of the business and, in a special article in the last Annual Number of the "Canada Lumberman" said: "a man may read our ad a dozen times and, not at that particular moment being in need of any building material, perhaps not pay much attention to it, but at the same time if he has any building to do, or is thinking of making any extensions or improvements, he naturally associates our name with the purchase." The R. E. Butler Lumber Co. seek to drive home a few facts daily about their business, and recently started conducting their publicity on a more systematic plan, believing that well thought out, specially prepared and artistic advertisements would be more effective in pulling power and productive of good results than intermittent large display announcements spread over a great amount of space.

How Results Are Being Achieved.

The result of the new plan is working out satisfactorily and the firm are of the opinion that the less reading matter put in an ad and the more plainly and neatly it is set up, the greater are the returns from the expenditure. A series of ads two columns wide and six inches deep, which they have recently been running, carry attractive headings, while the firm's name stands out prominently in a scroll on a black background. Some of their late ads are here reproduced in order that they may afford other retail lumber merchants pointers and reveal suggestions of a practical, helpful and encouraging character.

Buy your silo stock now. We have enough stock left for about four silos. You take no chance by securing this high grade material as we have sold it for years and know it has satisfied hundreds of silo builders. First come, first served. Our lines of hemlock, pine, spruce, fir, lath, British Columbia red cedar shingles and Butler's Imperial Rubber Roofing always dependable. Mail or phone orders given prompt attention.

Now is the time. Shingle that building; build that garage; repair that barn. Remember our motto: "Quality and service." Mail or phone orders given prompt attention.

Lest you forget. Big supply always on hand. Butler's Imperial roofing and building papers. Best that money can buy. Put up in one, two and three ply. Special discount for ten rolls or over. Prompt attention to phone or mail orders.

Quality and Service is our motto. Prompt attention to all mail or phone orders. Good supply of 2, 3 and 5X shingles always on hand.

Red cedar shingles stand the test. They laugh at years—they defy all weather conditions—they outlive the buildings of which they form a part. Don't consider a substitute when you can have the real thing. We have a good supply of 3 and 5x on hand. Mail or phone orders given prompt attention.

Phone 54 Woodstock.

Future of the B.C. Lumber Industry

United Effort Needed in Providing Proper Transport and an Efficient Selling Agency

By George B. Cross, New Westminster, B.C.

British Columbians are "thinking furiously," so says a Vancouver paper. This probably means that we must look out for our share of the "Pork Barrel."

I trust we may be all "thinking furiously" and doing what we can towards making Canada a better, happier and safer place in which to live and raise good large families of native born British Canadians. If not, then why all this sacrifice of blood?

But, seriously, the lumber manufacturers of British Columbia have good cause to do some hard thinking and "doing" in order to establish themselves on a sound basis for the great work that is before them.

In the past score of years they have accomplished at least this much, viz., their lumber and timber is now well known and wanted pretty much all over the world. Wherever it has gone, it has been received with favor and demands have come for more of the same.

But the returns to the manufacturers have been, so far, rather disappointing. The lean years have counterbalanced the fat years and we have had "much labor for little wool."

Cater Too Much to Building

United action is all that is now required to make our business a great success. The Canadian market, whilst being the best for us, is not all that is needed to occupy our much increased capacity. Not that we have exploited the Canadian market to its fullest extent. We have catered too much to the building trade, whereas our lumber is well adapted for many other industrial purposes. For instance in the building of railway rolling stock, the making of agricultural implements and vehicles of all kinds, the making of crates and boxes, etc., we have not half covered the ground.

Another feature in the domestic market has been against us, namely, the scarcity of orders during the fall and winter months. For many years, large buyers have taken advantage of this fact, and have induced manufacturers to contract to supply them with large quantities of lumber, enough to keep the manufacturers going for several months (and through the very best months of the year) March to July, at 25 to 30 per cent. below prices current in these good months, and very often at a loss.

The banks have, probably unconsciously, accentuated this evil. They have been generous in their assistance, but have insisted that their customers should show them orders in hand for their product, often before the logs were cut in the woods that is six to 12 months before delivery. In other lines of business this may be all right, but it catches the lumber manufacturer at the very worst time of the year to make such contracts, when lumber is at its lowest, and when buyers are in no need of it. I suggest that banks should have experienced lumber manufacturers, who have "gone through the mill" to advise them in making their credits, as is done in other countries. It would be a great benefit to the industry and save many a sore heart.

Dr. Howe Speaks on Forestry Needs

A stirring address was delivered before the Electric Club in Toronto, recently, by Dr. C. D. Howe of the Faculty of Forestry, University of Toronto, in which he emphasized the point that fire rangers should be efficient and appointed on the basis of merit and service, instead of political influence or party service. He declared our forests should be managed intelligently and that Canada had two great timber producing areas. Dr. Howe said that each contains 200,000 square miles, and they are separated by plains and prairies of the same size. Connecting these two forest areas from the Atlantic to the Pacific on the north is a great belt of soft-wood forest, containing about 1,500,000 square miles. We know comparatively little about this, except that, probably it does not contain much sawlog material. It may contain large pulpwood supplies.

The amount of timber destroyed by fire is almost beyond belief. More sawlogs have been killed by fire, in British Columbia, for example, than can be found to-day in the whole Dominion of Canada. Our Eastern Provinces have been as severely burned, according to area. The most destructive effect of repeated forest fires is that the young commercial trees are killed. These young trees, if allowed to live, would replace the forest.

Various Government organizations are spending several millions yearly on fire protection, and the safety of our forests still depend upon weather conditions. There isn't a Government fire protective organization sufficiently developed to cope with the situation in exceptionally dry seasons. Continuing, he added:

"The reason is that fire-fighters are not hired primarily because of their efficiency, but for other reasons. Our Provincial Government

deserves great praise for reorganizing its forest protection service in the last two years. However, we can never have successful and effective fire protection until it is run on a non-political and business basis.

"This has been recognized in other provinces. For instance, in British Columbia fire rangers are appointed by a non-political board of experienced men."

Splendid Programme for Shingle Congress

The second annual Red Cedar Shingle Congress will be held in Seattle on January 8th and 9th. The Washington Hotel has tentatively been decided upon as a meeting place. According to Mr. J. S. Williams, Secretary of the Shingle Branch, West Coast Lumbermen's Association, the programme arrangements are coming along in a most satisfactory manner, and indications point to the biggest and best meeting of shingle manufacturers ever held. There will be discussed such live and vital subjects as the "Possibility of Exporting Red Cedar Shingles," "Problems Incident to the Manufacture of Better Shingles," "The Consideration of Factors Effecting the Greater Serviceability of Red Cedar Shingles," "Improved Methods of Merchandising Red Cedar Shingles," and other kindred subjects.

A feature of the congress that promises to attract much interest is the offer of a cash prize of \$50.00 by the M. R. Smith Lumber & Shingle Co. of Kansas City, to the writer of the best article on "Crimps—The Cause and the Cure." Crimps have been the cause of more complaints by retail dealers than any other one defect found in shingles. Some manufacturers by constructing kilns in a certain manner, have almost entirely eliminated this defect.

Death of Well-Known Eastern Lumberman

Ernest Hutchison, of Douglastown, N.B., died recently at Columbia, South Carolina. He was a retired northshore lumber operator, was 71 years of age and leaves a wife and two children. Mr. Hutchison finished and handed over to the trustees the magnificent Miramichi hospital, at Newcastle, which was built and equipped entirely by himself at a cost of about \$100,000. He also built the Associated Lodge Hall for Douglastown at a considerable outlay. For many years Mr. Hutchison was a member of the Southwest Miramichi Boom Company and during his long and active career came in contact with many people.

Deceased, when a young man, bought out from his father, Richard Hutchison, who had once been a member of the firm of Gilmore & Rankine, his interest in the lumber mills at Douglas town, which business he ran successfully until he sold out to the Miramichi Company about ten years ago. He knew the business thoroughly, being himself an expert of lumbering and milling. He took a great interest in politics and sat eight years in the New Brunswick legislature.

The Rock Bay Camps Win Honor Flag

Ever to the fore on occasions of national importance, the B. C. Mills Timber and Trading Company, the pioneer lumbering concern in the province, and its employees responded finely in the Victory Bond Campaign, the total amount subscribed being no less than \$170,000. The employees in the several logging camps at Rock Bay and Cardero Channel made a splendid response, applications totalling \$64,000 (most of them paid in full) being received from that source, which response was very gratifying to the officials of the company.

The camps are naturally proud of their achievement, for it gives them a larger per capita amount than any other camp situated between Vancouver and the North; and thereby entitles them to the Honor Flag for the district.

The subscriptions received from the employees of the Hastings mill, Vancouver, together with that from the company, totalled \$106,000, an excellent showing, especially when one considers the fact that a good many of the employees were affected with the "flu," and could not be reached. Thus, with the \$64,000 from the camps, the total amount subscribed by the company and its employees was \$170,000.

The company gave to all its employees who wished to take advantage of it, the benefit of an extended payment plan; and it gladly undertakes all the clerical work in connection with the payments, and the safe-keeping of the bonds. The foregoing facts are evidence of the good feeling and the hearty spirit of co-operation which exists between the company and its employees.

A member of the staff of the company canvassed the Hastings mill employees, and the company facilitated the work of the canvassers of the Victory Loan Committee at the camps in every possible way. Arrangements were previously made for their convenience. They were personally assisted on their rounds by Mr. P. DesBrisay, the logging superintendent; and the company placed at their disposal the yacht "Davy Jones," for their trip to the company's and other logging camps.

Co-operation is the Key to Peace Problems

President Power of the Canadian Lumbermen's Association Extends New Year's Greetings to the Industry—Period of Unprecedented Prosperity Looming Up—The Coming Convention

As it is an impossibility for me to meet each one of my fellow members of the lumber trade, I wish to convey to them, each and every one, through the "Canada Lumber-

W. Gerard Power
President of the Canadian Lumbermen's Association

man," my heartiest good wishes for a happy and prosperous New Year.

At this time, about the best wish one business man can

extend to another is the wish that he be not a pessimist.

I am convinced that there is a period of unprecedented prosperity opening up for the Canadian lumbermen, the only doubtful question being: Will we have the courage to go after the business?

There will be new problems to be solved, that is sure, but the problems that will present themselves in the transition of trade from a war to a peace baiss, will not be any greater than other problems that have been met and successfully solved by our Canadian business men.

Co-operation will be the key to most of these difficulties. The manufacturers of the East understand this, and have come together in the formation of the new Spruce Manufacturers Association of Eastern Canada

That is the right spirit; but lumbermen should remember that they have an organization in the Canadian Lumbermen's Association that covers Canada from Coast to Coast, which is, and should remain, the parent body.

It is through the Canadian Lumbermen's Association that its members will be able to get together and prepare for the enormous trade that will undoubtedly come to us from war-torn Europe.

The forthcoming convention in St. John, N.B., will be a golden opportunity for the members to become acquainted with those in the trade, more especially our friends in the East.

As President of the Canadian Lumbermen's Association, I extend to all a most hearty invitation to attend.

W. Gerard Power,

St. Pacome, Que., Dec. 26th, 1918.

Eastern Quebec Cut will be Smaller

Chas. H. Nadeau, of Port Daniel East, P. Q., along with his partner, Colin C. Tyrer, purchased the sawmill shown in the illustration from the estate of P. O. Viall, just a year ago. The past season was a fairly busy one, the firm cutting 1,750,000 feet, while next summer they expect to cut 2,500,000 feet, the greater portion of which will be exported to the English market.

Port Daniel East has one of the finest harbors along the eastern coast and large cargoes were despatched in the past before tonnage became so scarce. The mill is also situated near the railway station which makes it ideal for car shipments. The accompanying picture also presents a general view of Port Daniel Bay and the booming rights of the mill. In regard to operations during the past season Mr. Nadeau says that, during the early fall, the lumbermen were hampered owing to the scarcity of help and then in the months of October and November the "flu" struck that section which meant a big loss to operators, both in expense and production. Of late, men have been

more plentiful, and around that district snow fell earlier than usual. The cut, however, will only be about 50 per cent. of normal times. Mr. Nadeau asserts that this is the most expensive season the lumbermen down his way have had to contend with and it is costing from \$4 to \$5 more per thousand to get out the logs than it did a year ago. Stocks on hand are at present low and mostly all the shippers are looking for an export trade.

Referring to the pulpwood situation it has never attained any great proportion down in the country around Port Daniel East, and according to advices received, will be the smallest in 1919 of any.

During 1915 and 1916 Mr. Nadeau shipped heavy cargoes which he purchased from the different mills along the coast, to the English market, and he is looking forward to transacting a large export business again this summer. The Imperial Government has not relaxed the control of lumber shipments as yet, but no doubt by spring the restrictions will be considerably modified and eastern lumbering firms will be allowed to charter and ship although tonnage will in all probability be high for some time to come.

The sawmill and booming rights of Charles H. Nadeau at Port Daniel Bay, Quebec Province.

May Operate in the Black Forest

Brig.-Gen. White Says Six Companies of Foresters Go Forward with Army of Occupation

Brig.-General J. B. White
Montreal, Que.

Brig.-Gen. J. B. White, D.S.O., who has been in charge of Forestry operations in France for the past two years, recently landed in Montreal on three months' leave. At the end of that time he will return overseas to resume his duties as there will be needed his services in the forestry corps as long as there are allied troops in the field in any capacity. Brigadier-Gen. White, who has won many honors in connection with his work, the latest being promotion to his present post, was employed for many years by the Riordan Pulp & Paper Company and had charge of their sawmill and pulpwood operations previous to going overseas. He had the necessary technical training and knowledge to qualify him for any responsibility in connection with timber

operations. Two years ago he came back to Montreal and raised the 242nd battalion. On crossing overseas Brig.-Gen. White went to France in charge of the Canadian Forestry Corps on active service and was also made Deputy Director of Forestry for the British authorities. It may be added that prior to the war Brig.-Gen. White had a squadron in the old 17th Duke of York Royal Canadian Hussars. In France the Brigadier had under his charge 14,000 Canadians and 7,000 attached men. These units were scattered all over France and were to be found in the peaceful forests of Normandy by the coast one week and within a few weeks up on the line with the Canadians at Vimy Ridge, or with the French armies in the Argonne, so that the corps sustained quite a number of casualties. That their work with the French armies was appreciated was indicated by the fact that several Croix de Guerre were distributed to the Canadian lumber men. They also received a number of decorations from the British authorities.

One section of warfare which benefitted considerably through the operations of the forestry corps was the Royal Air Force. There were eight companies kept busy on the provision of aerodromes, and these worked mostly up on the lines. Even if they did not, they were especially liable to be bombed by the boches, as the aerodromes were always made targets by the enemy, and naturally the forestry companies busy in the vicinity were amid the bombing. Since January, 1916, it is estimated that two million tons of timber had been supplied to the armies up to the time of the signing of the armistice, this being required for pit props, the construction of trenches, the making of "corduroy" roads, and the erection of huts, all this quite apart from the aerodrome needs referred to.

The Timber Assets of Finland

The most important peace time industry of Finland, the new independent power on the fringe of the north of Europe, revolves around the timber, which covers more than 60 per cent. of the total surface of the kingdom.

The process by which the logs are got down from the forests to the mills is one of great interest. As soon as the snow falls in the autumn the felling of the trees begins. The life of the woodcutters is anything but an easy one. They leave their homes for weeks at a time and settle in the forest so as to be near their work.

They cut down the trees, rough-hew them with axes, peel off the bark, pile them on sleds and take them to the nearest waterway. Finland is laced with great lakes and numerous rivers, so that the getting out of logs, in spite of the time it takes, is very cheap.

When the spring comes they are floated to the sea. Down the rivers it is comparatively easy work, for the stream carries them slowly along. But when the logs emerge from the rivers to the great lakes artificial traction is necessary. Booms are formed, like huge rafts. The passage of these rafts is very slow, and the men in charge of them build a hut on board and settle down comfortably for the summer.

The old method by which they got their raft to move was very primitive. They rowed out as far as possible with anchor attached to a line, dropped anchor, returned to the boom-raft, and wound up the

line on a capstan until the raft was pulled along as far as the anchor, after which the process was repeated over and over again indefinitely.

Nowadays tugs do most of the work, but, even with the aid of tugs, it often takes one or two summers for the logs to make the entire voyage from their first floating place to the mills.

Ontario Concern Secures Eastern Factory

The Thos. Pink Company, Ltd., of Pembroke, Ont., have secured a controlling interest in the MacFarlane-Neill Mfg. Company, of North Devon, N. B. E. A. Dunlop, M. L. A., of Pembroke, is the president of the new organization, and M. A. Tweeddale, of Fredericton, vice president and general manager. Thos. Pink and J. F. Munro, of Pembroke, are on the board of directors. It is the intention of the new owners to enlarge and equip the MacFarlane-Neill plant with the most improved and up-to-date machinery for the manufacture of lumbering tools. The MacFarlane-Neill Mfg. Company was organized in North Devon, in 1900, and has enjoyed a prosperous and successful career.

The Cut in Ontario Will be Less

J. E. Littleton, of the R. Laidlaw Lumber Company, Toronto, who visits all the leading camps in Ontario, has returned to Toronto, after an extended tour around the north shore. He states that the past fall has been an exceptionally wet one in the bush and he has not seen as much rain in a quarter of a century as during the past few weeks, while the water in the streams is very high. Logging companies are now well supplied with labor, but the help that has been secured from munition and other plants, will only about balance the number of men who disappeared by reason of the "flu" outbreak, and caused general disorganization in the work. Mr. Littleton says that he was in one camp about the end of October and the number employed was around 35. Outside of the cook and foreman all were either under 16 years of age or over 45, showing the class of labor that has hitherto been available. It is estimated that it will cost operators in Ontario from \$1 to \$2 per thousand more to have their logs skidded than during the past winter, and this increase will naturally be heavier by the time the logs are on the dump. Mr. Littleton estimates, from a general observation of the situation and interviews with leading concerns, that the cut throughout Ontario will be from 25 to 30 per cent. less than last year.

How the Spruce Situation Shapes Up

It is reported that a prominent Massachusetts firm recently received an order from a foreign representative for any quantity of spruce from 10,000,000 up to 50,000,000 feet at an advance of over 10 per cent on to-day's prices. It is stated that the offer was declined. This is unmistakable evidence of the strength of the market and the lively possibilities that loom up in regard to the requisitions from abroad for spruce lumber. It is stated that some of the operators in Quebec are asking Ontario wholesalers \$6 more a thousand for the cut in 1919 than they did at this time last year. On the whole the spruce situation, both from a domestic and export standpoint, appears reassuring.

A Valued Work of Reference

Catalogue No. 244 has just been completed by the Jeffrey Mfg. Company, of Columbus, Ohio, and shows the advantages of using the standardized elevators of this firm. This book which is entitled "Jeffrey Bucket Elevators," contains some 40 pages devoted to details of elevators, selected out of numerous styles used in the handling of a wide range of materials for practically every industry in the country. A page is given to each standard elevator which is illustrated in both perspective and line drawing, giving dimensions. The publication is printed on heavy coated stock and in design and craftsmanship is most attractive and impressive.

A supplementary estimate for \$500,000 has been issued by the British Government for "Expenses of Afforestation." Mr. Stanley Baldwin, Financial Secretary to the Treasury, explains that in view of the urgency of the question an Interim Forestry Authority has been set up to carry out the necessary work pending the passing of legislation setting up permanent machinery for the purpose.

Edwin J. May, for many years a lumberman in Weston, Ont., died recently in Toronto. Mr. May, and his father before him, operated a sawmill in Weston. Several years ago, owing to ill-health, he had to give up the business. Mr. May lived in Weston all his life until a few months ago, when he moved to West Toronto. He is survived by his wife and one daughter.

What Live District Branch Can Undertake

Branch No. 6 of the Ontario Retail Lumber Dealers Association was formed recently at an enthusiastic district meeting, held in Orangeville, Ont. Representative officers were elected and a number of important matters considered.

J. A. Matthews, of Orangeville, is the district chairman, while J. B. MacKenzie, of Georgetown, is district vice-chairman and honorary secretary. Udney Richardson, M. L. A., of Elora, W. G. Gorvett, of Arthur, John Howes, of Harriston, and Eugene Murphy, Jr., of Mount Forest, form the district committee.

All these members of the retail lumber trade are live wires who believe that, in organization much good can be effected, whereas in-

branch is in the request for the O. R. L. D. A., to lay before the Ontario Legislature the inequalities of the Ontario Business Assessment Act and to urge upon that body to pass such amendments as well result in the retail lumber dealer being assessed more in accordance with the assessments of other trades. Udney Richardson, M. L. A., of Elora, who is an active member of the district committee of Branch No. 6, has promised to give this problem his personal direction and will bring the question to the attention of the Legislature at the forthcoming session.

One of the members pointed out in connection with the Ontario Business Assessment Act that he was being assessed 60 per cent. of the value of his property, while a coal merchant paid only 50 per cent. and a hardware merchant in the same town only 35 per cent. The reason for this is not exactly clear and why an extra levy should be placed upon the retail lumber dealers is difficult to understand. It requires much more space to carry a stock of lumber than one of ordinary merchandise and space in the majority of our towns and cities, by reason of larger ground area means heavier assessment and taxation.

Another question which was raised was the practice of some wholesalers in selling lumber and shingles to wagon makers, hardwaremen, blacksmiths and others who are not entitled to handle these lines or to receive the goods at wholesale prices, coming as they do, directly in competition with the retail lumberman who is the legitimate medium of sale and final distribution to the consumer.

Besides, it is pointed out that such persons often cut prices unjustifiably and convey the impression, by this spectacular stunt, that the retail lumberman is waxing fat on unusually large profits. It was pointed out by the speakers that such outsiders only handle lumber, shingles and posts now and then as a mere side line, in order to create an impression that they are "good fellows" and draw custom to other branches of their regular business, where no doubt a fine clean-up is made. The retail lumberman retains a yard, stocks, office and merchandising facilities, year in and year out. He is on the job all the while rendering service and giving good value, and should be protected by the wholesaler who is straightforward and above board in all his sales transactions.

Spain is Latest Country After Lumber

Now that peace has come and war is to be no more, the eyes of the men with lumber to export may well be turned toward Spain, for it is known that there is a shortage of supply there which is beginning to be felt. In the enforced failure of supply during the war the scanty forest lands of Spain have been called upon to make up the deficit to such an extent that the government has taken alarm and is now planning extreme conservation measures which will pretty well shut off the domestic supply of timber.

J. A. Matthews, Orangeville, Ont.
District Chairman

J. B. MacKenzie, Georgetown, Ont.
Vice-Chairman and Secretary

dividual effort can accomplish little or nothing. A complete report of the proceedings of the inaugural meeting of the new district branch was presented in the last issue of the "Canada Lumberman." Among the topics discussed were the inequalities of the present business assessment, unfair competition in the trade, the using of timely advertising literature, plan books, specifications, and itemized bills of materials. There are many other matters of importance to which the district can give attention. Some of these may be disposed of locally while others will be brought up for deliberation in the larger body, known as the Ontario Retail Lumber Dealers Association, which will hold its annual session in the near future.

One particularly progressive move made by the new district

CAMP CLERK

the head office whereby to control the operation, the following system is outlined:—This, as will be seen, leaves nearly all of the extension and totalling of figures to the head office bookkeeper, who is perhaps better qualified to do this work than the practical man on the job, who often doesn't care to assume more clerical duties than are necessary.

Forms Used

Monthly Individual Account—(Fig. 7) Loose-leaf binder form, in duplicate.

Work Diary—(Fig. 8).

Final Period Settlement—(Fig. 9).

Regular time-order, for payments on accounts only.

The Monthly Individual Account presents an itemized record of all information needed to obtain balance on labor accounts. The following work on this form is required to be done in camp,—

Head the account with name, camp, rate, etc.

Enter time each day in "Time" column.

Post orders issued on account.

Enter van charges.

The rest is done at the head office at the end of each month when original sheets are turned in.

The Work Diary is merely an account (blank book) of the time spent on job, and charges to other companies, if any, and furnishes a check on total time as paid by wages. Kept up daily, this record presents no difficulties to the average man capable of using the English language, and tends to preserve records and stop leakage.

The Final Period Settlement form should be filled in with ink, thereby providing safeguard against change, and is handed to men as an order for settlement to be made at the head office, as necessity arises during the month. It covers the account only from the first of current month, the period prior to this being on file in head office, thus enabling the bookkeeper to settle the account to date. The Individual Account Form supporting the Final Period Settlement should be submitted at the same time, and the two should be checked before payment is made. To be effective, the Final Period Settlement Form must be filled in at camp at least as to the van account charged and the number of days credited. This is the only occasion when addition is required in camp.

The General Accounts

Books : Cash.

Purchase Journal.

Stores Journal (Sales and Distribution).

Ledgers (General, Individual and Camp).

Recap Book.

Journal Vouchers for Journal Entries.

Log Sales from Invoices by Journal Voucher.

Books of Record:

Merchandise Received.

Employees' Register.

Log Book (Summarized and recapped from Scaler's Reports).

Price List and Perpetual Inventory of Supplies.

In the case of most logging operations the general accounts are numerous enough to warrant subdivision into various ledgers. This provides opportunity for more detailed cost accounting and likewise facilitates trial balance work. The General, Individual and Camp Ledgers are recommended as covering about all requirements in this regard. Their titles are almost self-explanatory, but a brief list of illustrative accounts may be of assistance:—

General Ledger Accounts—
Assets—Fixed

Stumpage (deferred cost of sales)
Headquarters Buildings
Camp Buildings
Dams and River Improvements
Roads and Bridges
Camp Equipment

data or vouchers for authorization, and all of this is effected by the voucher form. All detail is either attached or itemized on the inside, and postings made direct from voucher as per accounts shown debited and credited on face. The total debits and credits of Camp and Individual Ledgers must also be posted to controlling accounts in General Ledger. When postings are completed vouchers are filed numerically in a permanent file for the purpose, thereby at all times furnishing

	POSTAGE								
	BALANCE DUE								

< 54. 7 >

Merchandise Received—(Fig. 15)—A convenient and valuable record of all shipments of merchandise received. It serves a multitude of purposes in the regular routine of the business, and if properly kept, a reliable check on invoices. Also a handy freight and express record.

Employees Register—(Fig. 16)—A practical record, as will be revealed by a study of the columnar headings. Each item is important, especially the ready check provided against employment agent's invoices. In this connection a rule should be established by all logging companies requiring new arrivals to report at head office before entering camps. The camp-clerks should promptly advise head office of new arrivals in camp, so as to facilitate the proper charging of fares, etc., against them.

Price List and Perpetual Inventory—(Fig. 17)—Card or loose-leaf system. For use in head office. This system furnishes an invaluable alphabetical purchase record and guide, especially useful in

logging operations where such an indiscriminate variety of stores is purchased. It is simple in operation and readily verified in any particular by physical inventory. Statements and statistics of supplies purchased, used, and on hand can be prepared from this record conveniently and accurately.

Cadgers Way-bill—(Fig. 18)—In duplicate. A useful and practical form for covering teamsters' loads of supplies. The original, bearing signature of teamster, remains on file in head office, providing the necessary data for invoicing. The duplicate accompanies load to camp clerk for check and entry on day-book, and later for comparison with invoice. The total weight shown regulates size of load.

Leather Belting and Its Efficiency

It is not every engineer or user of belts that understands thoroughly the meaning of the terms "working tension," "grip" or "co-efficient," or in what manner their respective values are obtained. Even though it might involve a rather lengthy explanation, it is certainly an instructive detail, and one well worth understanding. The term "working tension" is used to denote the net pull which a belt has upon the pulley which it is driving—in other words, its driving force, says a mechanical engineer, writing in "The Leather Trades' Review." This varies with the quality of grip, or, as it is termed, the coefficient of a belt, meaning the power of cling to the face of a pulley and tending to revolve it against resistance. There is, of course, a pull both upon the tight and the slack side of a belt, but the transmissible power is derived from the amount of pull on the tight side, after that existing on the slack side is deducted therefrom.

I will illustrate this in a simple but practical way: Take a smooth-faced, clean pulley, 15 to 18 inches in diameter and have it fixed on a shaft, not in motion, well within the reach of the floor. Then get a length of leather belting of any width and about 4 to 6 feet in length. Place this over the pulley and allow it to hang down equally at either end. To each end attach some arrangement whereby weights can be carried, and start by suspending an equal weight, say 56 pounds, at either end of the belt. At this stage the belt will have an equal tension on each side, but no driving pull or working tension will be operative for the reason that results are balanced. Now, at one end of the belt place additional weights until the belt just commences to slip on the pulley, then stop. If now the excess weight which I will assume is 75 pounds, is divided by the total weight upon the belt at the point of slipping, there will be as the quotient the value of the co-efficient of friction, or the amount of grip.

There are the equalizing weights, 56 pounds each, then the extra weights added, making a total on one end of the belt of 131 pounds, and the coefficient of friction is expressed thus:

$$\frac{75}{75 + 56 + 56} = \frac{75}{187} = 0.4$$

Now it might be thought that a wider belt than that used in this experiment, and a pulley of larger diameter, would show a greater co-efficient of friction, but the truth is that no difference whatever would be apparent. If a belt ten times the width of that used were employed and a pulley ten times the diameter, the results would be practically

the same. And for this reason: The total grip of the belt remains the same for the total tension, because the grip per square inch of contact area is relatively much less. This shows that the only effective method of increasing the power of a belt is to increase the co-efficient of friction, or, in other words, its grip.

It must therefore follow that the condition of a belt will be an important factor to efficient driving, since a dry, glazed, uncared for belt would have a working face quite unfitted to cling to the face of a pulley, and to give that amount of grip necessary to transmit which a belting of the width would be expected to do. On the contrary, it must be equally as apparent that the softer and more pliable a belt is—as exemplified in new leather of good quality, or belting which has been treated regularly and systematically with a good dressing—the higher will be its co-efficient, hence an enhanced power development would be obtainable with a reduced working tension; obviously a feature in all cases to be desired, and one to be kept in view by every power user.

Shipbuilding News East and West

The Cap Vert, the fifth schooner of the fleet of six being built by the Wm. Lyall Ship Yards Ltd., Vancouver, B.C., was launched recently. The "Cap Vert" is a wooden auxiliary schooner of the latest type. The sixth hull is now almost ready for launching.

The tern schooner "Flowerdew" was launched recently by the Shelburne Shipbuilders Company at Shelburne, N.S. She is the third large vessel to be launched from the Shelburne Shipyards this season, and is a fine looking craft of 392 tons gross register and of special construction throughout.

A splendid tern schooner built by the Yarmouth Shipbuilding Company was successfully launched recently. She was christened "Marsh" and is the largest vessel launched from a Yarmouth yard during the past forty years. She measures 158 feet over all, 33 feet beam and 13 feet depth, and her accommodation is splendidly arranged for the comfort of officers and men.

The new schooner "Marjorie Austin," built at Harvey Bank, N.S., by Hon. C. W. Robinson and Brewster Bros., was launched lately. The keel of the schooner was laid in March last. The "Marjorie Austin" is staunchly built and of particularly graceful lines. Her length of keel is 76 feet and beam 28 feet. Immediately after the launching she went to Shulee to load lumber for an American port and later will take a cargo to the West Indies.

Contracts for two ocean-going 320-foot lake freighters, to be built at the plant of the Port Arthur Shipbuilding Company, Port Arthur, Ont., are now completed, according to J. F. Paige, general manager of the company. "These boats will be built at our berths," said Mr. Paige, "and will have to be taken through the canal in two sections, as the longest boat which can lock through the canal must not exceed 261 feet." Mr. Paige said the boats were to be constructed to the order of the Canadian government. He announced that the War Karma, the last of the freighters contracted for to the order of the Imperial Munitions Board, had been turned over to the owners at Montreal, after a successful trip down the lakes.

The Busy Shipyards of Western Canada

The accompanying illustration shows the laying of keelsons of a wooden ship in a big shipyard at North Vancouver, B. C., and recently appeared in the "Weekly Bulletin," issued by the Department of Trade and Commerce, Ottawa, to whom the "Canada Lumberman" is indebted for the loan of the engraving.

Moving pictures of all the ship-building operations in B. C. were recently taken by the Exhibits and Publicity Bureau of the Commercial Intelligence Branch, and will be exhibited in every country where Canada is represented by Commercial agents or Trade Commissioners.

Shipbuilding on the Pacific Coast has been a particularly busy industry during the war and has developed into one of large proportions. The prospects for the continuance and expansion of this comparatively new line of enterprise are very bright. British Columbia possesses several large wooden shipbuilding yards which have carried out numerous large contracts.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

200 tons 60 lbs.
500 tons 56 lbs.

Reinforcing Steel Bars

100 tons.
100 tons (round) 1 in. x 16 to 17 feet long.

R. T. GILMAN & CO.,

211 McGill St. Montreal

TAKING CARE OF THE STOCK IN THE RETAIL LUMBER YARD

This is a very important feature in the conducting of a successful lumber business, especially when there is a planing mill in connection.

In planning your piling ground proper grading is the first essential. The gutter at the rear of your pile rows should be a couple of feet lower than the crown of your driveways, and provision made for these gutters to carry off the water.

Pile footings for ordinary stock should be in separate sections in preference to being continuous. This will facilitate renewals and adjustments of unequal settlement.

which will occur. For ordinary stock the distance between front and rear footing should be a little over 10 ft. so as to allow the ten-foot lengths to catch the back crossing, and a fall of from 10 in. to 1 ft. is none too much.

Two crossings are sufficient for ordinary stock boards, etc., but it is advisable to drop an extra one between when piling narrow strips. This will avoid breakage by walking over the tiers when piling or loading. A third footing is not necessary.

Timbers should not be used for footings, but blocks of cement with a plank on top or a plank on the ground (cedar preferred), then blocks of 6x8 or 8x8, and another plank on top. This will allow ventilation under your piles.

Be sure and keep your crossings directly one above another. A great deal of lumber is badly bent by neglect of this precaution. Be sure to keep a good cover on stock that is intended for milling, and you will reap ample reward both in saving of time necessary for machining as well as the cleaner and smoother appearance of your finished product.

Collingwood, Ontario DRUGGIST

Review of Current Trade Conditions

Ontario and the East

Naturally with the holiday season in full swing there has not been as much attention devoted to business as under ordinary circumstances. Trade, on the whole, has been rather quiet in every line and the chief interest has been in reviewing conditions and taking a survey of what the future has in store. One progressive measure that cannot fail to benefit the whole trade, is afforded in that which is being carried out by the Wholesale Lumber Dealers' Association to obtain statements of the total stocks in hand, in the various woods. This will afford some conception of what marketable stuff is on hand to supply local and foreign requirements. In the meantime the members of the Canadian Lumbermen's Association are keeping in close touch with the newly appointed Trade Mission at Ottawa, which is going to act in intimate conjunction with the Canadian Mission in London. By unity of action it is expected that some satisfactory orders will come to Canada through negotiations conducted by the Federal authorities with the Imperial Government. The fact that Great Britain will require 100,000 standards a month of soft wood for rebuilding purposes, is a hopeful indication of the demand that is likely to spring from the Old Country. Many orders are reported for large quantities of spruce and spruce deals at prevailing prices, and, in some instances, 10 per cent higher than present quotations. It is of course, difficult to establish the correctness of some of these rumored transactions. Such big things are in prospect and the trade is looking for such huge development that there is possibly considerable exaggeration in many stories going the rounds. Ontario travelers who have returned from the eastern provinces report a very enthusiastic attitude on the part of buyers in the Maritime district.

There, as well as in Quebec and Ontario, building is expected to be very active and retail lumbermen as well as wood-working industries are looking forward to a brisk season. In regard to what England requires and how this business can be secured an interview which appears in another column with Major General A. D. McRae, clearly outlines the situation.

In reference to prices these are remaining steady and the feeling seems to be impregnating the whole trade that values are going to hold during the coming season, at least, until well on into the summer, when, owing to the usual slowing down, there may be a shade in reduction. Those who study closely the situation cannot see why or how prices should come down. Logging operations are being carried on at an advance of 10 to 15 per cent over last year, and the lumber which is now in the yards—limited as it is in many cases—could not be replaced for anything like present values.

There has been considerable improvement in the labor situation, but the release of men came too late to effect any decidedly increased cut.

Work of this kind generally terminates about the first of the year, starting in in August. Wages continue to hold firm and there is not any prospect of a decrease. Many things will have to transpire before the pay end of the business will undergo any radical change. There are many questions involved in this, such as the cost of living and supplies, the industrial revival, the openings in allied industries, the emigration movement, the house rent problem, and the present restlessness which seems to characterize men in divers walks of life.

The whole situation from a producing, operating and distribution standpoint was pretty fully reviewed by representative manufacturers in the last issue of the "Canada Lumberman." They are almost a unit in their expression of opinion that present costs can not be immediately decreased, that stocks are lower than usual, that the cut during the coming winter will be small, and that with the increased overhead expenses and general uncontrollable charges, such as the higher prices for machinery, belting, taxes, income assessments, etc., there can be no logical come-down in the figure for the finished product. The retail lumbermen report that while there was not much building going on during the past year, still on the whole business from one source and another kept coming in with the result that in many cases the turnover was a little better than last year.

The building outlook for 1919 is brighter than it has been for some time, but some retailers fear that the continued high prices will prevent people from building. Repair work will be quite heavy as in many cases it is not possible to neglect any longer attention to delayed alterations and necessary renovations. It is believed that prices will be fairly stationary and no change is looked for during the next six months in any event.

One of the leading retailers in Western Ontario, comprehensively

sums up the general situation when he says that the expense of doing business last year was considerably more than in the previous one. Everything necessary for the carrying on of yard facilities and manufacturing in the plant advanced very materially and it was found difficult to keep step in the matter of prices to off-set the additional expense. The demand in some cases was insufficient to warrant the retailer getting a fair profit and in certain instances he had to be satisfied with turning over his stock at practically cost. However, everything looks well for trade during the coming year and just how soon the rebuilding revival will set in is, of course, problematic. The consensus of opinion, however, is that 1919 will be a good one for the manufacturer, the wholesaler, and the retailer, if courage, patience, foresight and confidence are exercised.

United States

During the holiday period business has been seasonably quiet. The various lumber organizations are making ready for a very active selling campaign during the coming season and to secure a large proportion of the business which is likely to come into American channels through the heavy foreign requisitions for building materials.

The industry is now generally undergoing a process of reverting to conditions as before the war. All government regulations, embargoes and other restrictions have been eliminated and the prices, which have been fixed for the government, have practically expired. Things are rapidly settling down to normal conditions. The general trade has been rather quiet, but everything points to renewed development. The manufacturers of passenger automobiles have been notified that they may now make these automobiles to 75 per cent. of normal capacity while the War Industries Board announces that the furniture conservation schedule, which was to have gone into effect at the beginning of the year, has been rescinded. Many other measures which were taken owing to the pressing necessity for the conservation of material, labor and transportation for strictly war needs have been eliminated. Thus the barriers are being cleared away and the trade confidence expects an active building programme.

New enterprises are talked of in many cities. Already orders from over-seas with which to replenish wiped out stocks are coming in. Italy is one of the new sources of outlet and has placed orders for over 7,000,000 feet of timbers with the Douglas fir industry. It is expected that much evidence of big business will manifest itself in many sections of the country within a few weeks. Once the movement sets in to build up depleted supplies, it is thought the momentum will gain force and the influence of active conditions spread themselves throughout the country and do much to fill the gap created by the curtailment of Government requirements.

It is said that Italy requires a very large amount of railway ties in addition to material for housing and other industrial enterprises. A big national reconstruction programme is in progress there and everything looks bright for the future. Other overseas countries of course will do likewise in due time. Rumors have told of inquiries for gigantic quantities of lumber being circulated in the United States by various reconstruction agencies abroad, and all this will soon come to a head. This winter will be spent by Europe in formulating definite reconstruction policies and plans and in drawing up specifications and the like, and when the spring building season arrives a great movement of American lumber across the Atlantic may be expected, to continue and grow as time goes on. The fore-runners of this business have already made their appearance; very shortly something more definite will materialize, and then the American lumber industry should be prepared, in policy and with materials, to meet the heavy demands that it surely will be called upon to meet.

The whole of the recovery of regular business depends very much on the action of prices, it being evident that many interests are determined to await lower price levels before engaging in any noteworthy activity. There has not as yet been any general or striking change in the price situation, but that the markets eventually will turn more and more to the buyer's favor is everywhere regarded as a sure development.

From all reports, the southern pine market is in a healthy condition. Many inquiries are constantly making their appearance, and many good orders are offering; but most mills hesitate to book too heavily at this time, really preferring to stay off the market until such a time as they have had the opportunity to replenish their badly broken stocks, and also to repair their plants in preparation for the

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

era of great activity and prosperity that they expect to come.

The furniture and musical trades are active which creates a fair demand for hardwoods and manufacturers are quite optimistic over building prospects. They have also a large export business in view, which it is believed will eventuate as soon as preliminary adjustments abroad can be affected to permit reconstruction. Prices are on the whole well maintained and in a few sections there have been some advances.

Great Britain

A good deal of confusion will arise during the next few weeks, but this, is inevitable, and merchants must exercise patience during the transition period, especially as they will not have long to wait for the peace demand which will rapidly gather in strength, says the "Timber Trades Journal." We believe that everything possible is being done to avoid dislocation of trade and the throwing of employees out of work, and so far is this policy carried that we hear of some instances where ammunition boxes, etc. are, at any rate, were a few days ago, still being manufactured under the old contracts. This seems a great waste of time and material, but our war organization had become a vast and complicated concern, and the most we can hope for is that losses of this nature may be minimized. The home grown trade will soon receive a great impetus from the expected partial withdrawal of control. There is little prospect of wages being reduced, at any rate, until living becomes much cheaper, which we fear cannot happen for many months.

The reaction from the strenuous times that have passed, when all business was practically directed into channels for the energetic prosecution of the war, has brought about entirely new aspects of trade which call for a pause while matters adjust themselves and take a definite shape. A halt has been called in the huge demands for hard and soft woods that were needed for the above requirements, and on which the trade has existed during the last few years; no new contracts are forthcoming from these sources, many Admiralty contracts, indeed, having been under clause cancelled, and the trade in these directions is solely confined at the present time to the completion of unfinished orders. In the meantime the disorganization that has taken place during the war in industrial circles has hardly commenced to reconstitute itself; a gradual return of labor is necessary for this object, and until this takes place the demands from these normal sources of consumption may be expected to be entirely inactive.

In this transition period matters cannot be anything but station-

ary, and in most quarters there is a state of marking time, everyone waiting for consequent developments which, it may be presumed, will follow the changed conditions.

To what extent the Government will control the hardwood trade is the question that the trade is concerned about at the moment. It dominates the position, and while it remains indefinite, arrests any movement that might be forthcoming in regard to purchasing in readiness for future demands.

There is an urgent call from producers of aeroplane spruce in British Columbia for a market that would absorb the vast amount of inferior Sitka spruce that has accumulated during the war period at the different mills in Western Canada. They might, perhaps, when the opportunity arrives, take into consideration, in looking for a profitable outlet for this stock, to the markets of this country. A large field for its consumption might be found in the cabinet trades, if the wood could be shipped at a reasonable cost and in such desirable conversions as are favored by these trades. In former years large quantities of Quebec pine of the higher grades were in strong demand for polished work in these industries, and, although spruce may not be so kindly working as the pine, it would present a vastly more handsome appearance when polished, and would probably soon establish itself as a popular wood for the purpose.

Energetic endeavors are being made by French firms on the French Congo, in conjunction with the Governor-General, to interest American consumers in the hardwood products of that Colony, especially in regard to okume and the several varieties of wood that pass into consumption as mahogany. They claim that both okume and the mahoganies have been successful as materials for aeroplane construction, and that the first-named wood is admirably adapted for plywood work.

Although the war is not yet over and demobilization cannot be carried out on a large scale, the Government are trying to solve that heavy task by well considered organization, so that when the conditions of peace are signed the country will not be flooded with ex-soldiers without employment. In the meantime, however, and whilst many men can be spared, the Government are arranging the release of men previously engaged in important industries, including the timber trade. Those employers in that trade should act accordingly, for the sooner their men are at peace work again the better it will be for the State and the future of the timber industry.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD.**

Trade Seasonably Quiet in Ottawa District

With sales slow and few orders coming in the Ottawa lumber market during the closing period of December indicated promise of better times ahead. The customary Christmas and New Year's lull asserted itself and consequently few of the trade looked out toward business. That is in the terms of shipments and sales.

While there was little going on outwardly there was apparently on the inside a great deal of thinking and speculation being indulged in as to the prospect of future conditions. In short, even with shell box orders cut off, there still ran a vein of optimism that conditions sooner or later would right themselves and that good business was

During the month of December the market showed practically no change so far as prices and stocks went. On the other hand the efforts of the lumbermen to build up or create business seemingly began to bear fruit. Quite a few inquiries were received by Ottawa firms from South Africa, West Indies, and South America, indicating that the export situation is beginning to show interest and perhaps soon open up.

The immediate concern of Ottawa lumbermen was not that of local sales. Everybody interested looked toward the export end and was keen to get the first word when it was going to open up. Representative lumbermen spoken to agreed that a great export demand soon promises to arise and to meet it lumbermen have got to have the stock in sight and go hot-foot after foreign business.

Up to Christmas Day no word had been officially received when the export market, governed by the restrictions of the War Shipping Board would open up. The lumbermen want to know when and where they can get bottoms and the grade of stock required before they start closing orders which some inquiries indicate are coming.

To South America, Africa, and the Indies, it was believed there would be competition. To England and France, Sweden and Russia with the United States, were looked upon as the most successful com-

petitors, so far as the Canadian trade was concerned. The increase in inquiries was regarded as a good sign or tending brighter things ahead, even though big orders were not immediately placed.

Buying for Canadian account did not amount to much. Locally a few shipments, most of which had been purchased months ago, went forward. Otherwise, general business was quiet. The demand for lath, shingle, and the building grades was practically nil.

Outside of the increase in inquiries perhaps the most hopeful symptom of future trade was that the market all around continued to remain firm as to price. According to reports no price cutting was going on.

Wholesalers had little to say and thus it was hard to gauge their intentions as to the buying of next season's cut at the rumored advance in prices. The general outlook with the ending of the year did not show any signs to warrant a drop in prices; rather the tendency seemed to be that the cost of next year's cut would advance. Ever since the war began the cuts have been growing leaner and leaner as the successive seasons went on and consequently dealers point to the fact that the stocks in the country to-day are below what they were on a peace footing. With the influenza epidemic this year the woods cut in Ottawa Valley is predicted to be only from anywhere from fifty to sixty per cent. of last year's operations. The cost of log production is also materially increased.

All Opinions Are Just Guesses

Writing to the "Canada Lumberman" on the present condition and prospects of the square timber trade a leading Eastern exporter says: "Experience counts for nothing and the man on the street can to-day form as good an opinion of business as any of the principals. All opinions are guess work and of no benefit to the general community."

A delicious drink —A nourishing food

Just as surely as you can carry canned meats, vegetables and fruits in to your camp, so surely can you carry in Nature's first and best food and drink—Milk.

Klim is the solution of the problem of milk transportation to out-of-the-way places. It is pasteurized separated milk in the form of a dry powder. Not cooked or boiled, but the natural milk solids, which when whipped into water, become again exactly as the original separated milk. There is no change in the flavor and no loss of food value.

Bring Klim to the aid of your cook. Let him provide the men with milk to drink at every meal, by whipping Klim into water. Let him improve puddings, vegetables, fruits, sauces, gravies, soups, etc., by the addition of Klim direct from the tin. He'll find it the most convenient form of milk he ever used, and the men will appreciate its genuine flavor and goodness.

You cannot enjoy drinking canned milks—**Try KLIM.**
The 10 lb. tin is the most economical to buy. You can get any amount where you now get your other grocery supplies.

Klim is genuine—the flavor proves it—Drink it.

St. John Says There Will Be No Cheap Lumber

The lumber market at St. John, as far as sales are concerned, is at this writing, entirely in charge of the buying and shipping of all wood goods for the United Kingdom. It is intimated that this condition is to keep up for nine to twelve months, but this may only be a guess and without foundation. It is believed by the manufacturers in Canada that the Mother Country is certainly not going to do anything to the detriment of her colonies and that sooner or later a return to per-war conditions will take place. One of the mainstays of Canada is her lumber resources and if a fair opportunity to market her goods is not given her, it will work a great financial hardship to the producers and country in general.

There is no American business offering, as building in United States, especially in the east, is at a standstill. Although stocks are low in the east, the yards claim they will not buy until later when they are able to see what is ahead, which, at the present time they cannot do.

There will certainly be no cheap lumber for 1919, as up to date it has been a very expensive winter to operate. Men are now getting more plentiful, but it is too late to help the lumbering in the woods, as crews were hired early and at very high wages. Large shipments of deals are going forward by transports from St. John, but all being past purchases of the British Munition Board.

Local, retail and factory business is beginning to show a falling off, although not as bad as in past years, as always winter brings a slowing up of joiners' work on account of bad weather conditions. Stocks of refuse are very light. Spruce boards, both merchantable and refuse, are hard to find at any price. Laths, shingles and boxes show only fair sales.

It is felt that no change will take place both in conditions and price, not prevailing until after the first of the year, when, without doubt, a change for the better will come.

Montreal Situation is Strong and Promising

Naturally at this period of the year, business in Montreal is restricted. The holiday season and the end of the year are not inducive to buying on any large scale. Wholesalers report very little doing in any lines, and no activity of importance is looked for until the near approach of spring. There is, however, a decided feeling that we shall then see a pronounced revival in constructional directions. The building contractors are of opinion that provided prices of materials will recede a little there is hope for an extended programme of building. Montreal is very short of houses and flats, and the return of our boys from across the water will aggravate the situation and almost compel the construction of a large number of residences.

While builders and contractors are looking for reductions in the cost of materials, they have no illusions as to the strength of the lumber market. Some of them state that they do not anticipate any lower lumber market. Some of them state that they do not anticipate lower lumber prices, although they say that a lessened cost in this direction would form a factor in the encouragement of more extensive construction.

The Montreal wholesalers interviewed expressed the opinion that the market generally would hold firm for many months. With the undoubted increase in the price of manufacturing lumber and the probability of a stronger demand for overseas, the chances are all in favor of quotations advancing rather than declining.

The export outlook is most encouraging. Great Britain, we know, is in urgent need of all the lumber she can secure, and the deciding question is as to the number of bottoms which can be spared to convey lumber to the other side. Cable advices from London speak quite optimistically as to prospects. The Canadian representatives in England have taken up this subject with the British Ministry of Shipping, and while the North Atlantic freight service is likely to remain for a considerable time under control there is every reason to believe that the amount of space allocated for commercial business will be very considerably increased. Canadian exporters, last season, were very hardly hit by the necessary restrictions, and they will welcome getting back to something like normal conditions, particularly as they hold some very extensive stocks.

Opening New Sales Office in Montreal

Canadian SKF Co., of Toronto, will open this week a sales office at 412 St. James St. W., Montreal, Que., under the direction of Mr. Geo. Sheppard, where they will carry a large stock of SKF double row self-aligning ball bearings, single row ball bearings, automatic drill chucks, ball bearing hangers and pillow blocks, "Quality" steel balls.

It is intended to give to Eastern users the best service possible in the matter of shipment and also to extend the SKF engineering

service for ball bearing designs and applications. SKF products are sold on an engineering basis by engineers, the first consideration being to recommend the correct bearing and method of application for the work submitted. The growth of the SKF companies has been remarkable. Commencing in 1907, in Sweden, with an initial staff of twenty people, it now comprises a plant employing 16,000 persons, controlling three mines where the special grade of ore for this product is mined. Plants are also established in France, England, Hartford, Conn., Philadelphia, etc.

Getting After Portable House Business

An export outlet for spruce, pine and hemlock suitable for building purposes was, seemingly, provided for at a meeting of the Canadian Timber Products Association, held December 20th, at the Chateau Laurier, Ottawa.

The Canadian Timber Products Association was incorporated some time ago and is comprised of some sixteen representative firms. The object is to promote the sale abroad of the products of Canadian woodlands.

At the recent meeting new officers were elected and it was decided to push the sale of knock-down and standard-built houses in the Old Country. With this end in view attempts will be made to secure large contracts for portable or knock-down houses from the French and British Governments.

The meeting, of course, was more or less private, the chief matter being the agreeing of the price at which the houses would be turned out and sold at. The price averages about \$400 f.o.b. ocean port Canada. In the winter months the shipping point will be in the Maritime Provinces, and in the summer, at Montreal.

The following new officers were elected: William Rutherford, W. Rutherford & Sons, Montreal, chairman; Mr. A. G. Rose, James Davidson's Sons, Ottawa, vice chairman; Mr. Fred Potvin, the Georgian Bay Shook Mills, Midland, Ont., secretary; directors, Messrs. F. Kent, Seaman-Kent Co., Meaford, Ont., J. S. Schultz, Brantford, F. C. Thompson and W. C. Edwards, Ottawa.

It was decided to send Mr. A. G. Rose to London to look after the securing of orders and survey the ground. He will leave early in January. The plan of operation is to secure orders in blocks of one thousand or if possible, ten thousand. It is believed the French Government will deal with Canada direct, and that the British authorities will look after the Belgium end of the business. When Mr. Rose arrives in London he will get in touch with the Canadian Purchasing Commission, of which Lloyd Harris and Frank Jones are members.

An aggregate order for ten thousand houses is being aimed at, and if more can be secured they will be taken. The number of feet in each house is to be 4,500. There are two types of houses figured on: Type "A," having two rooms, being put in at \$375, and the other a three-room house, of which no particular type was listed, is to sell at \$415. Blueprints from the French Government were followed.

When the orders are received the work will be proportioned to the various plants of which the members of the Canadian Timber Products are associated with. The distribution will be on the basis of the capacity of the plant. It was estimated that with the combined capacity of the factories concerned that two hundred houses could be turned out each week.

Organization for the Foreign Trade

It takes a great deal of money to transfer our lumber from the mills into the hands of the ultimate users in foreign countries. Our competitors in the State of Washington and Oregon are fortunate in having financially strong companies looking after the selling and transportation of their lumber into foreign markets. This missing link we need in British Columbia. The manufacturers are unitedly well able to supply the funds, but the matter requires organization and united action, says Hon. T. D. Pattullo of Victoria.

In regard to transportation the fact that it requires a great deal more money to transport our lumber into foreign markets than to buy the logs and manufacture it at home, renders it difficult in many instances, without close united action, to get more than cost for our lumber.

This is the case even in the Eastern Canadian market. The freight on a carload of box grade lumber for instance, delivered in Ontario, is more than the mill gets for it. What costs the buyer in Toronto from \$700 to \$750, the manufacturer receives about \$300.00—the balance goes to the railway company.

There is still plenty of easily available timber in British Columbia. No chance to corner it yet awhile, and plenty of sawmill capacity, so that our next united effort must be in providing an efficient selling agency and proper means of transport.

The Best is what you want

OUR Lumbermen's Clothing is acknowledged to be the Acme of Perfection, our large and full fitting Garments save time and expense in handling by your clerks, each article is always found to measure up to the size marked on the ticket, and the quality is fully guaranteed. We can give you prompt delivery of.

Lumber Will Maintain Present Prices

Leading Firms Believe Cost of Production Must First Come Down Before Any Change Occurs

Since the last issue of the "Canada Lumberman" additional expressions of opinion on the present conditions in the lumber market and the future outlook have come to hand. These all bear out the conviction that, owing to the high cost of operation and production, there is not much prospect of the products of the forest coming down in price, at least, not until such time as there is a decrease in wages and the expense of supplies and the high scale of living drops.

One of the largest firms operating in the Georgian Bay district state that 1918 was a very difficult one owing to the shortage of men and by reason of the enormous fall of snow a large amount of timber was left in the bush this spring. Then the low water in the rivers added to the troubles of driving. The firm report that during the past fall there has been a very heavy rain fall while labor has been none too plentiful and production so far has been delayed. The outlook, however, is improving, but the firm are of the opinion that it is too late to be of much advantage. They look for lumber prices that will be in advance of last year by reason of high operating costs.

Labor Situation is Improving

The John Carew Lumber Company, Lindsay, Ont., consider that there will be a great deal of lumber required to build up the devastated countries and that a lot will be required at home, as there has been very little construction in progress during the last four years. Since the war lumber has been used particularly for munition purposes. Continuing, the company say "that the prices of lumber are high at the present time, but while wages keep up the product cannot be manufactured to sell any cheaper. In the winter of 1914-15 we could get all the bushmen we required at \$22 a month and board. To-day we are paying the same men \$65 per month and board and even at this wage we cannot fill our camps. We have had one camp since August and another since September, and have now put in two additional camps, although all these are not filled. We expect that after the holiday season there will be no difficulty in fully manning them. In this part of the country the stocks taken out will not be heavy as very few lumbermen are operating extensively. The lumberman has to spend his money, at least one year ahead, before getting any return and, with the existing conditions, if he takes out heavy stocks, he might run quite a chance in that building may not pick up quite as quickly in the spring as imagined. However, the outlook is good."

Prices and Demand will be Maintained

Chew Bros., of Midland, Ont., say "that the urgent need throughout Canada for additional housing accommodation, together with the financial provision contemplated by the Dominion government under which the various provinces can secure loans respecting building will now, since war is over, result in creating a demand for lumber, etc., to meet the domestic need.

"In regard to the export trade, we think the way to secure Canada's share of this is to arrange promptly for necessary representatives overseas whose duty it will be to look after Canadian interests. We understand an organization, known as Canadian Industrial Reconstruction Association has organized and are soliciting and securing large sums of money from Canadian industries for just this purpose. They state their agents being sent over will cover the cull trade interests. We are not an authority on export shipment, but think if lumber could be manufactured into the more finished product, it would result in affording work for thousands of laborers throughout Canada who could be employed in this class of industry; also benefits would accrue during the period of lumber transportation facilities due to abnormal losses, during the war, of merchant shipping, in that each cargo would consist of a much greater quantity of finished product than if shipped in rough. Of course, there may be some objection on the ground of damage to finished stock due to handling, etc., for transportation.

"Respecting conditions in the woods this season, we think the output will be less, due to scarcity of labor during the early part of season and also to the "Flu" epidemic. Our output will be smaller than last year and just at present we are unable to say to what extent. Wages are probably 15 per cent. higher than last season and certain lines of supplies are also more costly.

"In reference to prices, although shell box orders will be at an end, it seems to us that our domestic building requirements, together with the share of export trade that we should be able to secure, should certainly more than take the place of the shell box business now discontinued. Supply and demand usually regulate prices and as the prospects are that the supply will be limited and the demand great, we see nothing to justify a reduction in prices. The cost of production thus far has been higher than hitherto."

Speaking of operations in the woods the Schroeder Mills & Tim-

ber Company, of Pakesley Station, Ont., say that costs are going to be very high this year, fully 25 per cent. more than last year, owing to increase in wages of \$10 per month and higher figures for all kinds of supplies. Weather conditions up to the first week in December had been very bad. Labor was scarce up to the middle of November, and since that time the company have been able to get all the men they require. Wages have not been lowered at all and it is the opinion of the manager that they should not be until the cost of living drops, which is not likely to eventuate for some time. The opinion is expressed that it would be advisable to keep wages up for a year or so after the boys return from the front in order to let those who have offered their lives for Canada and the Empire share in the big wages which have been paid foreigners and slackers.

No Reduction Until Producing Costs Lessen

The Spanish Mills Co., Cutler, Ont., say: "We think the suggestion advanced by the Hon. Mr. Ferguson, Minister of Lands and Forests, to send a representative of the Ontario manufacturers overseas to advertise our product is a very good one and we hope the lumbermen will not lose sight of it.

"As to conditions in the woods this season, up to date they have been the worst that we have ever heard of. Scarcity of labor and the poor quality of such as we got, along with the influenza and the almost continual wet weather of October and November, tended to make an almost impossible condition. Now, however, things are looking a little better, getting plenty men, although it is somewhat late in the season to help matters very greatly, but should we not have too great a snowfall before the middle or last of January, we may be able yet to make some showing in the production of logs. Wages are from \$60.00 to \$70.00 per month, which is about \$12.00 per month higher than last year. Supplies cost about the same. We would say that in the provinces of Ontario and Quebec production of white pine and Norway this season will be not much more than half of what it was last season.

"As to the price of lumber in the near future, we do not anticipate much change. Those in the lumber business, from the manufacturer to the retailer, must hold prices or lose money, and what is being produced to-day is costing more than last year. We think lumber will hold its own for six to nine months, and perhaps longer, and with the reduction in cost which we would anticipate in the season of 1920, then we should say that lumber will drop in price proportionately.

Personal Paragraphs of Interest

Mr. Jas. Donovan, of Toronto, left recently on an extended business trip to the mills in British Columbia and will be absent six weeks.

Jas. Russell Sutherland died recently in Toronto, after a short illness from pneumonia. He was 31 years of age and for a time was in the lumber business in Quebec and since removing to Toronto was an inspector for the Canadian Aeroplanes Ltd.

J. E. Walsh, who for many years has been manager of Transportation in connection with the Canadian Manufacturers' Association, Toronto, has been appointed the general manager of the C. M. A., with supervision of the staff in all departments, branches and sections. Mr. Walsh is widely known to the lumber industry, in the affairs of which he has always taken deep interest, and many friends will congratulate him on his well deserved promotion.

R. H. Campbell, Dominion Forestry Supervisor, who was seriously injured in a railway collision at The Pas and was in the hospital in Winnipeg, has entirely recovered and recently paid an official trip to Alberta.

Harding Downey was instantly killed in Downey Bros.' lumber mill at Hopewell Hill, N.B., recently. He was engaged rolling logs on to the bed when one of the large belts running an edger snapped and the end struck him a terrific blow on the head crushing right through the skull. He was a cousin of the owners and is survived by his wife and six children.

Another Company Ceases to Exist

The Vancouver Timber and Trading Company—one of the chain of companies promoted in this province by Alvo von Alvensleben—was placed in liquidation at the request of the Dominion Bank, Vancouver, which is a creditor for over a quarter of a million dollars.

Mr. F. W. Tiffin, who made the application, stated that as there are no assets in sight he would not ask that the provisional liquidator, Mr. J. W. McFarland, put up any security.

The company had at one time owned a large number of timber licenses, but over a hundred of these had been hypothecated to the Dominion Bank as security for advances, and the remainder are held by P. Burns and Co., who are the next largest creditors.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

F-4 (B. & F.)

"Reliance" Chain

With F-4 (or B. & F.) Attachments; the best thing for Saw Dust and Light Refuse Conveyers. Used also for Lumber Conveyers.

The Jeffrey Square Shank Pin Construction eliminates all rocking motion in the side bar.

Jeffrey Square Shank Pin Construction

The hard smooth steel pins with the square shanks fit into perfectly square holes. The bearing surface is the full width of the pin. We are the originators of this type of chain and have been building and improving it for 25 years.

F-2 Attachment

Jeffrey Detachable Chain

The type most generally used for Chain Drives. With F-2 Attachments to carry flights, Detachable Chains make good saw dust Conveyers.

"Reliance" Malleable Drag Chain

FOR SAW DUST AND REFUSE CONVEYERS

JEFFREY CHAINS

For Conveyer Service in Handling Logs, Lumber, Mill Refuse, Slabs, &c.

Not just chains, but chains that combine all the qualities and features demanded where greatest production or capacity is to be obtained.

Our 36 years of Chain building experience and knowledge of the Lumber Industry's needs makes the recommendations of Jeffrey Engineers valuable to you.

Newsy Briefs From St. John

A report reached St. John recently that the British schooner, Abbie Keast, lost 40,000 feet of lumber from her deck during a recent storm. She was enroute from Parrsboro, N.S., to Boston. The lumber in the hold shifted and punctured a large opening in the stern of the schooner.

S. G. W. O'Reilly, of Ottawa, was in St. John and Halifax recently in connection with the shipment of lumber overseas during the winter season. He was looking after the exportation of lumber for the Imperial Munition Board.

The office of the Newville Lumber Company was destroyed by fire a few days ago and unfortunately the fixtures were not insured. The Company have secured another office and are again carrying on their business.

Many Schooners Under Way at Parrsboro

Quite a fleet of schooners has been built on the shores of Minas Basin this season, and several of them were launched last month. Among them was the handsome four master, "Governor Parr," the largest vessel ever built at Parrsboro, N. S. "Governor Parr" was the first Lieutenant-Governor who ever visited this part of the province, and the township, comprising that part of Cumberland county lying along the shores of Minas Basin, was named Parrsborough in his honor. When Mill Village began to assume the proportions of a town, the name of the township was quite commonly applied to the village and when incorporation took place it became the legal name. Now, after the lapse of nearly one hundred and forty years since the Governor's visit, his memory is revived and freshened by having Parrsboro's biggest and best ship named for him.

Two days before the "Governor Parr" was launched another four-masted schooner of somewhat smaller size was turned off at Scott's Bay, an arm of Minas Basin. This fine vessel, like the "Governor Parr," is fitted with auxiliary engines to burn crude oil and be used for propulsion in calm weather. These, of course, are in addition to a gasoline engine such as all big schooners now carry for hoisting purposes. The same week the above vessels were launched, a tern schooner was put off at Port Greville, and another and larger one was launched at Noel. A four masted schooner of moderate size is ready for launching at Diligent River, and will be turned off as soon as conditions are favorable. It is probable that several tern schooners will

be launched along the Parrsboro shore about the same time. These are all fine vessels and would make a splendid addition to the Parrsboro fleet, but the builders are not permitted to keep them, for in most cases, even before the vessels are completed, outsiders offer prices for them that prove too tempting to be resisted. During the past two or three years one Ontario man alone is said to have acquired something like a score of the new vessels built along this shore. However, there may yet be a chance to make some needed additions to the Parrsboro fleet. It is understood that all or nearly all the builders in the vicinity will continue in the business another year at least. The builders of the "Governor Parr" will build two vessels next year instead of one, and it is quite possible may show even greater results during the coming season than have been attained this year.

Revival of Spruce Activity in the East

During the past two years the embargo on deal shipments to the United Kingdom and the scarcity of labor have reduced the output of deals so low that it became a negligible quantity. This was almost literally true of last year, but new markets have been found this season for several million feet of lumber, consisting largely of deals and scantling. One Nova Scotia dealer, whose total shipments amounted to more than 9¼ million feet, shipped by rail 4,140,000 feet of spruce and 1,444,000 feet of hardwood to various points in Canada and the United States. Add the lumber exported to the United States by sea and the cargoes shipped to South Africa and the Canary Islands, and we have a total more than twice as large as the whole output last year. Yet the total output this season was not as large by more than nine million feet as the shipments of deals alone to the United Kingdom in 1916.

The only condition that will prevent a largely increased output next winter will be the impossibility of securing sufficient labor. If the operators can get all the men they want the output will undoubtedly assume record proportions. If the men can not be had the operators will have to be contented with a smaller cut, but they will employ the largest gang possible. Considering the number of men that will be required for producing ship timber and for shipbuilding the prospect of getting all the men wanted in the lumber wood does not look very encouraging, but, judging by the quantities of supplies that are being sent into the woods, it is evident that some operators expect to feed large numbers of men and horses.

What are You doing with Your Slabs ?

No. 25, Slab Resaw

THE shortage of men in the woods will no doubt continue for another year or two.

It will be necessary to get every possible foot of lumber out of each log to meet the demand.

A Mereen Johnson Slab Resaw will insure your getting the maximum of lumber with the minimum of labor.

That last piece close to the bark will be needed.

Let us tell you about our RESAWS. Write for circular.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

It is said that a great number of men have flocked north during the past few weeks to work in the mines around Porcupine and Timmins and in the lumber camps. One large lumber concern recently engaged two hundred men for work in their woods operations.

The Mitchell, McDonald Company Ltd., has been incorporated with head office at Berkeley, Ont., and capital stock of \$50,000. The incorporators include Thomas Mitchell, M. A. Mitchell and E. T. Walters, all of Berkeley. The company is empowered to carry on business as sawmillers and dealers in timber, logs, lumber and lumber products.

It is announced that the Department of Mechanical Engineering at the University of Toronto is preparing to do some original research work along the line of aeroplane construction. Some time ago an air tube, four feet in diameter, and sixty feet in length, was constructed in the Thermo-Dynamics Building. The department received two planes recently which they stored in the foyer of Convocation Hall.

The Tavistock Lumber Company Ltd., has been incorporated with a capital stock of \$20,000 and head office in Tavistock, Ont. The new organization is authorized to carry on in all its branches a timber and lumber business, and buy, sell and deal in logs, lumber and wood of all kind. Among those interested in the company are Henry N. Roth and Edward Roth, Tavistock; C. J. Zehr, S. B. Zehr, all of East Zorra Township, Oxford County.

The Camden Paper Mills Ltd., has been incorporated with a capital stock of \$250,000 and headquarters in Toronto. Among the incorporators are Angus McLean of Bathurst, N. B., Hugh McLean and M. E. Preich of Buffalo, N.Y. The company is empowered to manufacture, sell, import and export paper and to deal in all kinds of paper and products thereof, as well as rags, sulphite, etc., and to carry on in all its branches a pulpwood, lumber and timber business.

Word has been sent from Ottawa that the construction of the new Welland Ship Canal, work on which was stopped owing to the war, will be proceeded with at an early date. Some \$12,000,000 have already been expended at the waterway and five sections were started. The Trent Valley will also be completed. That portion between Lake Simcoe and Lake Ontario has been open for some time and it is now proposed to complete the remaining portion between Lake Simcoe and Georgian Bay.

P. B. Wilson, vice-president of the Spanish River Pulp and Paper Mills, Sault Ste Marie, Ont., recently celebrated his fifty-second birthday. Mr. Wilson was born in London, Eng., and came to Canada, after a successful career as a financier and accountant in the Old Country, just nine years ago this month. He was secretary and director of the Forest Mills of British Columbia, Revelstoke, B.C., for two years and later was appointed comptroller and a director of the Spanish River Pulp and Paper Mills, Sault Ste Marie, and three years ago was made vice-president of that organization.

A staff of surveyors, said to be in the employ of M. J. O'Brien, Limited, Montreal, are engaged in survey work at Des Quinze, about twenty-five miles north west of Cobalt. This spot is a great natural water power and, when developed, there will be furnished between 200,000 and 250,000 horse power. The surrounding country is rich in minerals and pulp wood, and as cheap power is one of the requisites of development, it would not be surprising to see several new enterprises undertaken in the way of plants for the manufacture of woodenware, pulp, paper, and wall board. The north country is looking to a great boom in the near future.

The Keewatin Lumber Company, Keewatin, Ont., have made extensive alterations to the boiler house of the big mill formerly owned by the R. P. Lumber Company and is installing new and larger boilers. The big mill of the company in the west ward of Keewatin will be running next season, but is not yet known whether the second mill will be in operation. Much depends on the situation in the woods. Help has been scarce and inefficient and the company may not be able to get out sufficient logs to keep both plants going to capacity. It is the intention, however of the Keewatin Lumber Company to have the R. P. Lumber Company's mill in readiness should they desire to put it in commission.

The Ontario Department of Lands, Forests and Mines, in an effort to assist in alleviating the fuel shortage, is placing about 15,000 cords of hardwood on the market. The wood is at Algonquin Park, and is what is left over after the requirements of the public institutions in Ontario have been met. The Government is prepared to supply this wood to the municipalities at \$6.75 a cord, f.o.b. point of shipment. There is one condition attached to the offer, and that is that the municipalities in turn sell it to the citizens at what it costs them. Wood cutting operations are being continued, and it is expected that during the winter there will be from 10,000 to 15,000 cords more available for disposition in the same manner.

James Whalen, of Port Arthur, who is President of the Port Arthur Shipbuilding Co., and also of the Whalen Pulp and Paper Mills, says that the coming year should be a bright one for the "twin cities" of Port Arthur and Fort William. Keels were recently laid at the Port Arthur shipyards for two freighters, each Welland canal size. These are the first boats for the Department of Marine under the new merchant marine policy of the Dominion. Mr. Whalen also thinks the prospects are good for the establishment of more pulp and paper mills in Port Arthur, and believes that city will become one of the great pulp and paper centres of Canada. The Port Arthur Pulp and Paper Co., which has been in operation for one year now, has enjoyed a very prosperous season and has orders ahead for sulphite pulp for many weeks.

Eastern Canada

The St. Maurice Lumber Co., 2 Notre Dame St., Three Rivers, P.Q., are contemplating the erection of paper and pulp mills at Three Rivers. The manager is Mr. R. F. Grant and he will purchase site for above, which will be an extension to their present plant.

The Laurentide Company, Grand Mere, P.Q., which has enjoyed many

years of successful operation in the pulp and paper line, recently placed its stock on a 12 per cent. basis. The dividends have doubled within the past seven years, showing a fine record of earnings and careful management.

The Hampstead Lumber Company Ltd., has been granted letters patent, with head office at Hampstead, N.B., and capital stock of \$12,000, to carry on business as manufacturers of timber, lumber, pulpwood and products of the forest generally. Among those interested are W. L. McAdoo, of Kars, N.B., lumberman; R. B. McKean, of St. John, lumberman; and W. E. Golding of St. John.

A typical logging scene is presented in an appropriate calendar sent out by E. Baillargeon, dealer in lumber, pulpwood and ties, 147 Mountain Hill, Quebec. Half a dozen husky river drivers are shown in picturesque attire "Breaking the Jam," this being the title of Philip R. Goodwin's well-known painting.

Ellwood Wilson, chief forester of the Laurentide Company, writing in American Forestry, tells of a visit to the sawmills of New England and Quebec, and refers to reports received by him from New Brunswick and Nova Scotia. He says the quality of the trees left in the woods is growing poorer and poorer, and that quantity production is the only end now sought.

The Quebec Forest Protective Association will hold its annual meeting on Jan. 29th. The St. Maurice Forest Protective Association and Southern St. Lawrence Protective Association will hold their meetings at 10 p.m. on the 30th, and at 2.30 of the same day the members of the Woodlands Section of the Canadian Pulp & Paper Association will hold their meeting. The annual meeting of the Canadian Pulp & Paper Association will be held on the 31st. All the meetings are to be in Montreal.

The River Ouelle Pulp & Lumber Company, St. Pacome, P.Q., have sent out a large and artistic calendar to their many friends and customers in the lumber trade. There is an attractive reproduction in colors of Philip R. Goodwin's noted painting "A Successful Call," in which two hunters are in the act of shooting a handsome buck just as the animal has crossed a stream. The figures of the different days of each month are printed in dark blue on a pale blue background and stand forth prominently making the calendar very acceptable for office use.

Notice appears in connection with the Workmen's Compensation Board of New Brunswick of the rate of assessments on the pay rolls of the trades and industries. It is noticed that the lumber industry comes under class 2, and the rate of commercial, a yard, is \$1.50 per \$100 annual wage bill, and a lumber yard including the delivery of lumber carried on in connection with the sawmill, the rate is \$2. The same rate applies to pulp and paper mills, while on sawmills, shingle mills, lath, box and shook mills, the figure is \$2.50. In the hauling of lumber and railroad ties, the assessment is \$2, and in the manufacture of boxes and packing cases, not otherwise specified, \$1.50 is the annual levy on each \$100 paid out in wages.

It is said that during the past peeling season, owing to the high price of poplar the production of that class of wood has increased two hundred per cent in New Brunswick and that the cut of spruce wood has fallen off nearly one-half. The spruce mills at the present time are not especially anxious to obtain spruce wood, the rough wood in particular, which in previous years has been shipped in large quantities out of Eastern and Northern New Brunswick. Peeled wood is demanding a fair price. However, it has not the bullish tendencies that were indicated one year ago. The amount of green wood that will be cut this season for shipment to Maine mills will be practically nil. There are several reasons for this. Green wood is much heavier than peeled wood, and the heavy freight rates make the price paid for freight much higher than the cost of the wood in a great many instances. Yet the Maine mills, even when the freight rate is small, are not handling the green wood in hardly any case.

Western Canada

The Carey Lumber & Implement Company Ltd., Carey, Man., have been incorporated.

The Atlas Lumber Company, Lacombe, Alta., are contemplating the erection of lumber sheds and office at Bentley, Alta.

The Capilano Timber Co., 510 Hastings St., West, Vancouver, B. C., are contemplating the erection of sawmills at North Vancouver, B.C. The new mill is being erected to double the capacity of the present output.

The Tidewater Copper Company, an extra-Provincial Company, has been registered with head office at 618 Alaska Bldg., Seattle, Wash., and provincial stock of \$1,000,000. The company is empowered, among other things, to purchase or otherwise acquire and to own, lease, sell, and convey timber lands and limits, and to acquire, build, lease, and operate sawmills, etc.

The Virginia Lumber Company Ltd., has been incorporated with head office at Coombs, B.C., and capital stock of \$60,000, to carry on business as timber merchants, sawmill, shingle mill and pulp mill owners, loggers; to buy, sell, prepare for market, import, export and deal in saw logs, piles and poles, and wood of all kinds, and to manufacture and deal in lumber, timber, shingles, laths, sash, doors, etc.

Prince Albert is considered to be a very suitable location on account of its proximity to the sources of lumber supply, for a new industry which is being promoted in Saskatchewan. It is proposed to establish a toy factory to be operated on a conservative basis for the benefit of partially disabled soldiers. The details are now being arranged with F. M. Riches, head of the Department of Soldiers Civil Re-establishment in Saskatchewan.

Production, in the matter of aeroplane spruce lumber, will be greatly decreased in the future. In April last there was a production of 500,000 feet of aeroplane spruce in British Columbia, which in November last reached a total of 6,850,000 feet for the aeronautical department of the Imperial Munitions Board. These figures do not include the output of aeroplane fir. When it is remembered that the aeroplane lumber constitutes not more than 30 per cent. of the cut, it will be realized what a tremendous operation has been carried on.

The Federal Lumber Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$50,000, to purchase, take over or otherwise acquire from the Federal Lumber Company, a company incorporated under the laws of the State of Washington, and head office in Seattle, Wash., the business now carried on by them in Vancouver, B.C. They will be empowered to deal in lumber and timber of all kinds, operate lumber mills, sawmills, pulpmills, etc. Among those interested are Wm. Clark, Alta Vista, B.C., E. B. Day and P. Day, lumbermen of Kerrisdale.

Install a "By-Pass" Exhauster in your Saw Mill, Planing Mill or Plant

Our "By-Pass" Exhaust systems save your power and give better service. They handle green sawdust or wet, stringy material that usually clogs up an ordinary Blower system. The fan wheel is not overhung. No heating, clogging, or shaking. Three bearings.

Write for information.

We manufacture and install systems complete.

Toronto Blower Company
156 Duke St., Toronto

LINK-BELT

FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed," we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show two types of Link-Belt here. Our catalogue shows many others. Send for a copy.

Keep the Home Fires Burning

The following are a few opinions of the trade regarding

Plibrico Jointless Fire Brick

for Furnace Linings, Dutch Ovens, Woodburners, Dry Kilns, etc. Photos of originals will be sent on request. PLIBRICO FIRE BRICK can be installed by your own men and is being used from Halifax to Vancouver for all purposes instead of Fire Brick and Fire Clay.

THE BALDWIN LUMBER CO., LTD.

RED CYPRESS

Baldwin, La.,
November 1, 1918.

To Whom it May Concern:—

We wish to state that we have for the past year used Jointless Fire Brick material furnished by Chas. Gruneberg & Co. We have found this Brick a very great service, as far as arch building is concerned. It is especially good for patch work. We have never been able to equip completely any one furnace in order to give it a thorough trial, because all of our furnaces were built before we started using Jointless Fire Brick. Therefore, our experience has only been in replacing torn out places with this fire brick and it has given success.

With kindest regards, we are,
Yours truly,

THE BALDWIN LUMBER CO., LTD.,
J. Allen Barrett,
Sec.-Treas.

J. M. BRIDGES

Manufacturers of

YELLOW PINE LUMBER

P.O. Pleasant Hill, La.
(Box 103)

November 11, 1918.

Gentlemen:

Replying to yours of the 5th inst. in regard to the merits of your Jointless Fire Brick.

I have been using it in constructing my Dutch Ovens for more than a year now, and find that there is economy in using it, and can heartily recommend it to anyone for that purpose.

Yours very truly,

J. M. BRIDGES.

JOHN E. DU BOIS

Manufacturer of

Yellow Pine and Hardwood Lumber

Home Office, DuBois, Pa.

Reply to Lake Mississippi,

November 6, 1918.

Gentlemen:—

Your letter of the 5th, asking about our experience with Jointless Fire Brick, received. We have used this brick for repair work on our Dutch ovens and are well pleased with the result. Some of the work has now been about one year and is still in good condition.

We expect to use more of it.

Yours very truly,

JOHN E. DUBOIS,

By J. E. Welch.

VACHERIE CYPRESS CO.

St. Patrick P. O., La.

November 8, 1918.

Gentlemen:—

In reply to yours of the 5th inst. asking our opinion of the merits of your Jointless Fire Brick, beg to say, that as far as we have used this material, we are highly pleased with the results.

We find it very easy to apply, any one, even not a brick layer can use it with best of results. We have used it only to do repair work on our furnaces, but are certain that it would be a good thing for new work and would outlast ordinary Fire Brick by a large majority. If we are considering the building of new furnaces, we should certainly try this material.

Very truly,

Vacherie Cypress Co.,

PROCTOR SERVICE

We do not lose interest in Proctor Dryers immediately after selling and installing.

Once each year we aim to send an expert to inspect every Proctor Dryer in operation. If the dryer isn't right he MAKES IT RIGHT before leaving. We want every Proctor Dryer to be O.K. all the time.

Naturally, this service is of great value to the user and is appreciated, and this is one of the reasons why owners are always so willing to recommend Proctor Dryers.

Yes, it pays to install a Proctor Dryer from the service standpoint alone.

In addition we offer minimum floor space, minimum labor requirements, minimum heat and power consumption, maximum capacity, absolute constancy of temperature and humidity conditions and highest quality product.

Tell us your drying problem in detail. There's Proctor Dryer for every drying need.

—the unproductive scrap heap

Is your mill up-to-date or are you still content to allow that pile of sawdust, shavings, ends, slabs, etc., to prove a burden instead of big source of income? With the big prices which prevail for wood pulp and those chemicals distilled from waste wood it will pay you to consider installing the necessary plant to make the scrap heap productive—and then write us! We have specialized in chemical-producing plant for over 80 years and have installations in all parts of the world.

Skidding and Loading Machinery To Suit Every Need

Do you want a Light Portable Outfit? Try our Ten Horse Power Gasoline Driven Machine.

We believe this is the handiest little outfit ever offered the Lumberman for Skidding or Loading Logs.

We don't make the gasoline engine. Any standard engine can be used.

The whole outfit can be mounted on a wagon or sleigh if desired.

On a single line it will skid or load any log up to a ton and a quarter in weight.

Do you want a Large Powerful Outfit for skidding heavy logs or for pulling loaded trains?

We can supply you with such an outfit—an engine that will lift or pull ten tons or more on a single line, for skidding or loading purposes, and will operate four skidding lines at once, if desired.

We can also supply you with the right machine, at the right price, for moving a whole train of logs for loading car by car.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

—IN—

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

You pay for Chapman bearings whether you buy them or not

FIRE BRICK

Differs in Quality and Variety

For instance, a certain quality or kind of brick that gives satisfaction when used in a Refuse Burner, may show up poorly if used in a Dutch Oven.

It all depends on getting the right kind and the right quality for your particular needs.

Just tell us what you want it for, and we'll send a fire-brick that was made for that very purpose.

We Manufacture the Following Well-Known Brands

**"Elkco Special" "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"**

Dunlop "Gibraltar RedSpecial" Belting

Abnormal Friction Pull

vs. Elasticity of Friction

BETWEEN every ply of specially-selected, heavy Cotton Duck in Dunlop "Gibraltar RedSpecial" Belting is a layer of pure Rubber which, through a Dunlop calendering process, so permeates the fabric that it binds the several plies into one integral piece.

Some belt manufacturers offer to sell their product on the basis of "Heavy-Poundage in a Friction-Pull" Test. To obtain the latter result it is not necessary to secure such an expensive Rubber Friction as is used in "Gibraltar RedSpecial." This fact alone ought to be a pretty good gauge of the value of the "friction-pull" test.

In buying "Gibraltar RedSpecial" you get the advantage of years of careful laboratory work on our part with this result: The friction is of that "just-right" elastic quality which allows for the give and take necessary in rounding the pulleys; hence the reason "Gibraltar RedSpecial" is known for maximum Power, Speed and Service.

Note the Short Grain Rubber Friction

This Belt Section illustrates a Heavy "Poundage-Pull" Friction. To secure this result the Friction Grain is short and stiff. Elasticity and Flexibility have been sacrificed to secure such a result.

Note the Long Grain Rubber Friction

Dunlop "GIBRALTAR REDSPECIAL" has a Friction of Special Dunlop Rubber that retains its life indefinitely. "Note the long grain Rubber Friction," as illustrated. Elasticity has not been sacrificed for Abnormal Friction Pull.

UNLIMITED capacity for service is an intrinsic quality with Dunlop "Gibraltar RedSpecial" Belting. The success of nearly a quarter of a century in the manufacture of Rubber Products is built into Gibraltar. The original Made-in-Canada Red Rubber, Frictioned Surface Belting, "Gibraltar RedSpecial" has stood the infallible test of time in turning the wheels of industry in a multitude of Canadian plants from the Atlantic to the Pacific.

The Dunlop Unreserved Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

BAND RESAWS

NEW Standard 60-in. Band Resaw

South Chicago, Ill.,
Feb. 16, 1918.

Gentlemen:—We have now operated one of your New Standard 60-in. Band Resaws about one year, and it certainly is a perfect machine in every particular. It has always done everything we have ever asked it to do, without any difficulty. We expected to have some trouble in operating it, but we now have three men here in the yard that can handle it, which proves that it is a safe and easy machine to operate.

BOND
DOUBLE-SURE
QUALITY

Bond Patent "Spiro" Compression Couplings

When the inner and outer shells of the "Spiro" Compression Coupling are drawn up over the tapered and spiral-slotted sleeve and bolted, every square inch of the inner surface of the sleeve comes in direct contact with the shaft.

The result is enormous gripping power—at least 50% greater than in any other type of compression coupling, as proven by practical and scientific tests.

This is one of the reasons why "Spiro" Compression Couplings are the make you should specify when your master mechanic or millwright says he wants the "best."

You will find "Spiro" Compression Couplings and our complete line of "Double-Sure" Transmission Equipment fully described and illustrated in our catalog No. 38-PA. A copy should be on your desk; you can secure it for the asking.

TORONTO, Canada

BURNOIL ENGINES

Operate Perfectly on Cheap Fuel Oils

No carburetor, batteries or magneto.

No preheating, blow torch or hot surface.

Simple, economical, sturdy. This engine can be run indefinitely at slow speed and then immediately speeded up to maximum power. Just the type needed for continuous towing, rafting and general manouevring. Starts instantly.

Representatives in Eastern Canada:

The
Giant

Worm Drive Truck Delivers the Goods

This is particularly true of its service to lumbermen. Its sound construction, and holding capacity render it the most suitable truck for heavy lumber work.

Another important feature of the GIANT Truck is that the cost of upkeep is down to a minimum, because it can be run on cheap fuel.

You will do well to consider the GIANT for your deliveries.

Let us demonstrate its value to you.

USE KEROSENE

The DUNTLEY Hydro-Pneumatic Gas Generator is an exclusive feature of GIANT

MOTOR TRUCKS. With this device the Giant TRUCK may be operated on kerosene or gasoline, at a saving in fuel cost of over 50 per cent.

Continued on Page 72)

Put a Belt as Good as this on *Your Pay-roll*

This Graton & Knight 40" 3-ply Heart Brand Belt is five years old. It has been running on heavy duty for the Milford Light and Power Co., Milford, N.H. The cost of this belt in cash has been \$1.81 a week, or .004 per delivered horsepower per week.

Put a belt as good as this on your pay-roll. Its low cost of upkeep is the result of Graton & Knight Standardization. That means the proper belt for any given requirement. It means the right quality of leather and the right kind of tanning for a given purpose. It means true economy—full delivery of power, without waste.

Leather is the ideal belting material. It has a characteristic pulley-gripping quality. It has pliability with light weight. It has the stretch and the come-back that gives and takes. It stands mauling by shifters and the gruelling strain of main drives. It is firm and strong. It is tough, but tractable. These are the characteristics that good belting must possess.

Every year nearly 300,000 hides are tanned in the G. & K. factory. That gives uniformity. The more stock handled, the more latitude there is for picking equal-quality material for a given specification. And

G. & K. Tanning is of a fixed standard of quality for specific requirements. We make all kinds of leather belting, for every use—large and small.

Load carried and conditions of operation must figure largely in the length of service of any belt. Some drives limit belting to a few months or even a few weeks. Graton & Knight Standardized Series Belts are made to give the longest possible delivery of efficient power at the lowest possible cost. And they do it. It may be that belts all look alike to you—and it may be that you are spending more than is necessary for some belting requirements. We can and will help you find out.

Many of the best-belted plants ask us to specify the belting for every drive. Try the plan yourself. Then, when buying, call for "Graton & Knight — Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

"Most Powerful, Most Economical Truck on Market"

SCORES of lumbermen tell us that Duplex 4-Wheel Drive Trucks are absolutely dependable—are the only practical and economical means of solving their transportation problems.

Among them is C. A. Sanders of Mississippi, who declares that "we could not get along without our Duplex Truck."

For the hard pull—up steep grades—over soft spots—through sand or mud—a truck must have *abundant tractive power*.

Because the Duplex wheels grip the road surface at *four* points, *all* power generated by the Duplex motor is actually utilized as a *pulling and hauling force*.

The Duplex 4-wheel drive principle accounts for its mighty power—its dependability under most rigorous haulage conditions.

Let us send you our latest booklet containing photos of Duplex trucks as operated by lumbermen in all sections of the country. We will gladly send you "Duplex Doings," the heavy hauler's magazine.

DUPLEX TRUCK COMPANY

2062 South Washington Ave.

Lansing, Mich.

*With tire mileage greater—
And fuel consumption less—
Duplex cost per ton-mile is always lower.*

C. A. SANDERS
LUMBER

MAGNOLIA, BR. MI. Miss. Sept. 24, 1918.

Duplex Truck Company,
Lansing, Mich.

Gentlemen:

In reply to your inquiry of the 20th concerning our 4-Wheel Drive Duplex Truck, I am pleased to advise that it has done all we expected of it. So far, we have spent only \$5.00 for repair parts and we would not have had to spend this if we had not overlooked oiling the transmission.

We could not get along without our Duplex truck. Our haul is 12½ miles one way or 25 miles to the round trip, over ordinary country roads, and as you know this could not be done with teams.

Heretofore we did our hauling over six miles of railroad with locomotive but when the Kentwood & Eastern Railway pulled up their line, we were forced to find other means and we turned to motor-trucks.

After careful investigation we became convinced that the 4-Wheel Drive Duplex, with its four drivers, gave twice the promise of success we could expect from a truck using only two wheels for driving.

Demonstrations verified our reasoning in the matter. We know a two-engineer operates and looks after it, which means that it is in competent hands.

A truck requires more care and attention than a locomotive because it runs over rougher roads. A competent driver will under no circumstances hurt his truck; an incompetent one could ruin one in a day.

As stated in the foregoing, we could not operate our plant if we had to depend upon teams for delivering our lumber.

Our belief is that the Duplex is the most powerful and most economical truck on the market. We believe it is going to help many saw-mill men out of a "bad hole" and that it is to play a big part in lowering the average cost of lumber.

Yours very truly,

C. A. Sanders.

Saw Carriages

We Make all sizes for every type mill

Our steel saw carriages are well known throughout the industry in Canada.

The Carriage illustrated is our No. 44 Three block outfit. Knees recede 44" from the saw line. May be furnished in any number of head blocks or axles, also with steam set works attached to either our No. 3 or No. 4 set. This is one of the most substantial carriages ever designed.

We make mill machinery of all kinds. Send for our catalogues and detailed information of any machinery you require.

THE E. LONG MANUFACTURING CO., LIMITED
ORILLIA, ONTARIO

Time Demonstrates Ability

1844 ————— 1919

*In Business
for 75 years*

IT is not the occasional success of a Band Mill or Edger that makes an astonishing record, that demonstrates ability. It is the long record of many years of steady reliability—of building each machine a little better than called for—that has kept Waterous products in the lead.

For *three quarters of a century* the name WATEROUS has stood for dependability and service.

Every time Waterous is put on an article it increases Waterous responsibility; for it represents our recognition of the fact, that this past record must be maintained. It is your assurance that your machinery is built upon all the experience that the past can contribute to the needs of the present. For this reason, when you buy WATEROUS products you get more than a mere machine—you get a machine that has *dependability, efficiency and service* built in.

*Our Products must satisfy
us first.*

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 85c per lb.; West of Fort William, 88c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

Long-Bell Lumber Branded

The Long-Bell Lumber Company, the largest distributor of Southern Pine in the United States, announces that hereafter all its lumber and timbers will be branded. All lumber will carry the trade-mark, which is mechanically stamped on one end of each piece, and timbers will have the same mark stenciled upon them. That trade-mark—

Long-Bell

is "The Mark On Quality Lumber."

Long-Bell lumber products have long held a well merited reputation for uniform high quality. Since they are now trade-marked, the retail lumber dealer who sells these products will get the full benefit of their good reputation.

For bigger, better business, place your orders for Long-Bell branded lumber.

The demand for Hardwood Lumber will undoubtedly be extremely large as soon as business gets under way on a peace basis.

Production is about 50 per cent. of normal and will remain so for a year or two at least.

A few months of normal business will take every stick of dry hardwoods in the market.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

LET'S COOPERATE

Cooperation is the secret of business success.

As manufacturers we've found that out in our line. As wholesalers and retailers you've found it true in your business

Is there any reason under the sun why we can't extend that same principle to cover our mutual relations—and to our mutual advantage.

We'll play the game—do our part. Will you do yours?

We're going to put British Columbia Red Cedar Shingles on the map during 1919 as never before.

We're going to advertise—extensively too—tell the consumer just how good they are. That means grist for your mill. We don't deal with consumer enquiries. We refer them to you.

We've got out attractive display cards and literature on roofing that will be mighty interesting for your patrons—and we're planning to issue a series of booklets on shingles that will get right there with the consumer.

Above all—we're turning out a trade-marked shingle that for quality and grade can't be equalled for roofing.

Will you cooperate with us?

Send for our Display Cards. Get a package of our literature. We'll send them in quantities to suit your needs.

Write us—tell us about the Shingle situation in your district—give us any suggestions you think will be to our advantage.

1919—Let's Cooperate

With best wishes for a prosperous year.

Issued by the
Publicity Section of

The Shingle Agency
of British Columbia

We Manufacture the Following Well Known Brands

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

FIRE BRICK

Each brand is specially suited to a separate use. We have the experience to manufacture and supply the finest grade of Fire Brick for the varying uses of the Lumber Industry. The same brick may not meet the requirements of your Dutch Oven and of your Refuse Burner.

This is a product that should have your most careful attention. When so much depends directly on the successful operation and dependability of Fire Brick in your plant, it will repay you many times to make a most careful investigation before the installation. Let us show you where our product has been successfully used for years. Let us suggest a special brand for your particular purpose.

We have an interesting catalogue that will be sent you. It will give you an insight into the proper methods of Fire Brick construction.

LET'S GET TOGETHER

Put "ASBESTOL" Gloves or Mittens to Any Test

When you consider the unusual wear—the comfort and the service that "ASBESTOL" Gloves and Mittens bring to wearers it is not surprising of the wonderful popularity they enjoy.

Next time you want gloves or mittens, be sure to specify "ASBESTOL." You can then be sure of getting the best hand protection that can be had.

"ASBESTOL" Gloves and Mittens are economical, too, because they will outwear the ordinary kind.

Every "ASBESTOL" Glove and Mitten has the "ASBESTOL" trademark. It is your guarantee.

CHICAGO - - - ILL.

Demand this Trade-Mark

INSPECTED

On All Your Shingles

It means —

- Demanding a shingle that is up-to-the specifications of grade purchased.
- Demanding that the mills making your shingles help you sell them.
- Demanding that the makers of the shingles you sell, assist you in creating a demand for such shingles.
- Demanding that the mills making your shingles, get back of strong associated effort to improve and stabilize the shingle industry.

You are the Gainer

You have nothing to lose and much to gain in specifying "Rite-Grade inspected." Sales assistance is freely rendered and rendered free to dealers handling those brands that bear this symbol of grade certification and integrity of manufacture.

Write for Grading and Packing Rules, and full particulars of the "Rite-Grade" Plan.

SIMONDS

SAW STEEL PRODUCTS

In The Small Saw Mill

Here, as well as in the large mill the economical superiority of Simonds Saws is easily demonstrated. They hold their cutting edge; they saw true; they make high grading lumber. These things mean profit to any millman. Write us about the saws you want.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 39

Toronto, January 15, 1919

No. 2

The Export Business and What It Means to Canada

It is gratifying to record that according to apparently reliable sources of intelligence, there is something doing in the export lumber line. It has been felt for some time that if Canada wanted to secure its just proportion of structural material for the building of houses in Great Britain it must go after the business in a large way and on a unit basis, that the usual channels of procedure would not avail, but co-operation and aggressive action were the chief considerations of the moment.

During the past few days, word has come from London that the British Timber Controller has purchased a billion feet, board measure, of Canadian timber material. The details of the plan have yet to be worked out. It is possible that when the grades, sizes, quantities and finish are made definitely known that the west will supply four hundred million feet or perhaps more. The happy outcome is the result of timely and effective action taken by the Canadian Mission in London, England, supported by the Canadian Lumbermen's Association, who decided at a meeting some weeks ago that the Dominion was in a position to furnish much of the wood products that would be required, not only in Great Britain, but throughout the devastated countries of Europe. It was known that other nations were at work endeavoring to land big business, but all things being considered it was seen a strong disposition existed on the part of the Mother Country to favor her Dominions to as large an extent as possible, owing to the splendid part played by their soldier sons in the gigantic struggle for liberty and civilization.

Canada to-day enjoys a pre-eminence in British circles never attained before and the result is that big things are now developing in the export line. It is pointed out that Canada gets first pick of the European lumber business and much credit is due the Trade Mission in London, England. The spirit and purpose as outlined by

a leading Canadian lumberman in a recent interview in this journal, is being carried out. Small deals, close competition and petty misunderstandings were denounced, and it was pointed out that as Canada had shared in common with Britain the sacrifices of war, now that peace and prosperity are returning, the Mother Country is willing to show Canada such consideration as is necessary to enable her to "carry on" successfully during the period of reconstruction. Shorn of all sentimentality and chauvinistic considerations, Great Britain, in a practical, commercial way, is doing her bit for us in 1919, as Canada and Canadians did for the stability and permanency of the Empire during the previous four years.

An Association That Has Grown in Service and Worth

What confederation was to the scattered provinces of this country over half a century ago in welding together divers interests and divided sections of Canada into one influential and steadily expanding parent body, known as the Dominion, so has the Canadian Lumbermen's Association proved to the great pioneer industry of lumbering. Less than a dozen years ago there was no unity of interests, no bonds of sympathy, no coming together, no common meeting ground, between the representatives of the trade. It was felt that, while there might be local organizations of one kind and another, still the need for a strong national body was very apparent. After a decade the Canadian Lumbermen's Association stands out to-day sturdier and more active than ever. It is more national in scope and purpose and less of the provincial permeates its being. With few exceptions each year has witnessed the association gathering strength and influence. The Canadian Lumbermen's Association stands for much in the way of accomplishment and concord. The reason for its existence is to be of service and value to the members in particular and the public in general.

Greater problems than ever will be dealt with at the forthcoming convention, to be held in St. John, on February 5th and 6th. Issues will be deliberated, on the outcome of which the prestige and status of Canada as one of the great wood producing countries of the world will largely rest. If the lumber industry of this commonwealth is to attain that measure of importance and influence which all its exponents hope to witness, there must be eliminated from the ranks, so far as the export trade at any rate is concerned, all idea of provincialism. The slogan "that east is east and west is west and never the twain shall meet," must be thrown to the winds; and instead must prevail national sentiment and entire harmony, for it is only through cohesion and co-operation that big business can be landed.

In giving effect to these principles the founders of the Canadian Lumbermen's Association did a great deal and builded better than they knew. To-day these principles are emphasized to a larger degree than ever. This fact is evidenced in that for the first time in its eleven years, the Canadian Lumbermen's Association is meeting outside the provinces of Ontario and Quebec. The east is now claiming attention and there is no doubt in the near future the west will receive an equal measure of recognition, for it is desired to make the organization as truly representative and national in character and vision as possible.

The policy of the Canadian Lumbermen's Association is to look forward and not backward, to invigorate the industry as a whole in the great work of readjustment and transition from a war basis to a peace footing. In this spirit the Association will continue and no doubt as the years go by, its usefulness and effectiveness will be more widely felt and recognized. It is, therefore, of the greatest importance that the attendance at the forthcoming conclave in St. John should be the largest in the history of the parent body. The problems to be tackled are many, and they should be settled with the idea of the greatest good to the greatest number. This cannot be satisfactorily effected without everyone who belongs, being in his place and taking part in the deliberations that will contribute to the welfare and upbuild of the industry, both at home and abroad.

Getting Out of All Projects What Is Put Into Them

In the affairs of life men generally get out of every pursuit exactly what they put in to it. If a man conducts his business in a listless, halfhearted and indifferent way, he is pretty sure to reap like results, but if he brings to bear upon its management thought and energy, system and efficiency, he will generally find himself forging ahead of his fellows and earn the satisfaction which comes from doing well everything that is worth doing.

What applies to the wholesale, retail and manufacturing business is equally pointed in its reference to association work and, while there are a few men in every community and every trade who will have nothing whatever to do with organizations, they represent a hopeless minority and are not among the most active and aggressive representatives of their vocation.

The isolated attitude or selfish spirit of "I am going to run my own business and nobody can tell me how to conduct my affairs," still prevails to a limited extent. Such men lack the co-operative idea and fail to recognize that in unity there is strength and that more can be accomplished by concrete, well directed and harmonious endeavor in one month than could be effected in a year by any individual or sporadic spurt. Nowadays it is cumulative force that counts. It is the driving power that makes business go in this era of the world's progress, that stimulates production, creates turnover and finds new avenues for trade. No better expression of this silent, powerful force is seen than in association work. In all the affairs of business team play on the part of those associated with any firm is what tells and tallies and in general affairs, legislative, economical, administrative and financial, a union of interest and an association of ideas, through a guild or public body, will achieve many desirable results.

Bearing this in mind it should be the pleasure—as it is the privilege—of every retail lumber merchant in Ontario to attend the first annual convention of the O.R.L.D.A., which will be held in Toronto, on Tuesday, February 11th. That a membership of nearly 150 should be attained within twelve months is a record which stands out as unique in the way of trade organizations and stamps the association as being one whose worth and work is appealing to all. There are many after-the-war problems to be considered by the retail lumbermen and as in the multitude of counsel there is wisdom, so the dealer can best meet and overcome these issues by approaching them in a broad, liberal spirit and learning just how the other fellow is going to line up his business.

The coming year promised to be one of the best and brightest in the history of lumber trade in general. It should also be most fruitful and satisfactory to everyone in particular and in all likelihood will be if there is cohesion and harmony in the retail ranks and the members approach and solve the various problems in a spirit of enterprise, co-operation and mutual good will.

Some Editorial Short Lengths

In commenting on the enactment of the New Brunswick forest act and forest fires act, and the creation of a forestry advisory commission, the Canadian Society of Forest Engineers, in a recent report, pays the following tribute: "Through the recent enactment of the forestry and forest fires acts in New Brunswick, this province has now taken its place among the leaders in the matter of progressive legislation respecting the protection and administration of the Crown lands. The law as it now stands embodies the best features of the laws of the other provinces and of some of the States. Altogether this legislation comprises what is probably as advanced a body of forestry legislation as there is to be found in Canada or the United States.

The War Department has created a special agency, with a director of sales, to dispose of vast quantities of timbers and other wood products which were on hand at various cantonments, and building projects throughout the United States at the time the armistice was

signed. The sudden ending of the war, with all the great work for the government under way, for a time threatened to create a serious problem. It was feared that millions of feet of lumber, not consumed on the government contracts would be thrown back on the market, and that a species of commercial chaos might result. The action of the governmental departments is declared by Wilson Compton, of Chicago, Secretary-Manager of the National Lumber Manufacturers' Association, to have gone a great way toward solving some of the problems confronting the lumber industry of the country. The Director of Sales, whose offices are in the Munitions Building, at Washington, will confer with committees representing industries affected by disposal of different kinds of supplies, in order that business conditions may be disturbed as little as possible.

In co-operation with the Quebec Forest Protective Association and the Canadian Pulp and Paper Association, the Canadian Forestry Association will hold a public meeting on Wednesday afternoon, Jan. 29th, in Montreal, when Col. Henry S. Graves, Chief Forester of the United States, who has recently returned from France, and the Hon. W. R. Brown, of Berlin, N. H., will be among the speakers. The Canadian Pulp and Paper Association is arranging for the presentation of the reports of the committees appointed at the last conference on logging methods. It is also proposed to have papers on lumbering in Scotland, and on aerial photography as applied to forest maps, a discussion on slash burning will take place. The meetings of the various Forest Protective Associations, the Canadian Forestry Association, and the Canadian Pulp and Paper Association, covering two days, proved very successful last year, and it is proposed to carry out the same arrangement on January 29th and 30th next.

It is a trite but, nevertheless, true saying that the only way to get business in quiet times is to go after it. At all times resources and initiative count for a good deal and the salesman who uses his brains is the one who scores most frequently over his competitors. Clear thinking, good judgment and prompt action, together with some originality, have carried many men to the front in spite of insuperable difficulties. A good illustration of this is afforded in a story now going the rounds. It tells how a live insurance man landed a prospect whom it had never been possible previously to corral. The tale concerns Tom Lowry, of Milwaukee, who was a widely-known traction magnate. He did not believe in life insurance and had never taken out a policy: in fact he took a special pride in turning down all solicitors. Whenever a new man was taken on and his boss wanted to try him out he always sent him around to see Lowry. If he lived through the ordeal and came out with any confidence in his ability, the chief agent knew that the beginner would survive and likely make good.

Now, Lowry would bet on anything that contained any element of chance. At a ball game he would bet that out of the next five men up, three would fly out; in a hotel lobby he would bet that out of the next twenty men to come in, five would have whiskers.

One day a new solicitor called at Lowry's office, and sent in his personal card, giving only his name. Back it came with the request for the man's business. The insurance agent said he wanted to make a bet. He was instantly admitted.

"Mr. Lowry," he began right off, "I want to wager \$100,000 to \$1,800 that you will die within the next year."

"You're on!" said Lowry.

"All right," replied the agent, "just sign this." And he passed over an insurance application blank that had been previously made out!

Lowry signed it. Time of sale, three minutes.

An interim Forest Authority has been appointed to make preliminary arrangements for developing afforestation in the United Kingdom. The members are: Mr. F. D. Acland, M.P. (Chairman), Lord Clinton, Major David Davies, M.P., Colonel Walter Stuart Fotheringham, Brig.-General Lord Lovat, Mr. T. B. Ponsouby, Mr. R. L. Robinson, and Mr. A. MacCallum Scott, M.P.

Many Unique Features for Big Convention

Eleventh Annual Gathering of Canadian Lumbermen's Association in St. John on February 5 and 6 will be Most Important and Far-reaching

The eleventh annual meeting of the Canadian Lumbermen's Association will be held in St. John on February 5th and 6th. This will be an outstanding session as many live issues, particularly those relating to the export trade, will come up for discussion. It is, therefore, both a matter of urgency and expediency that the attendance should be large and representative as possible.

It is only a little over a decade ago that the Canadian Lumbermen's Association was organized. At that time its membership was small and confined largely to two or three provinces but, with the ensuing years, expansion and cooperation have been the watchwords. Now the Canadian Lumbermen's Association is broadly representa-

One of the docks owned by Stetson, Cutler & Company, St. John, N. B. There are 5,000,000 feet of spruce deals piled on the wharf ready for shipment overseas and some to the United States. The lumber was all turned out at the large mill shown in the illustration

tive of the great woods industry of the entire Dominion and national in scope and outlook. The annual meetings have generally been held in Montreal, Ottawa or Toronto, and the movement of the gathering to St. John is a distinctly progressive step. Many eastern spruce manufacturers have recently joined the organization, and it is understood that important sessions of the spruce men will be held in St. John on Monday and Tuesday, February 3rd and 4th.

It is probable that, for the first time, the delegates will travel from Montreal to the scene of the convention in special cars, and the attendance promises to be the largest ever. There are several unique features in connection with the proceedings which will be appreciated by all. It is essential in the development of the wood products business in Canada that the West should be thoroughly conversant with the East. By meeting in a convention and becoming better acquainted a larger and more liberal idea of affairs generally is developed and domestic and foreign conditions and market outlook are more widely comprehended.

The sessions of the Association will be held in the Board of Trade rooms, Prince William Street and, outside of business agenda, the social attractions will be a dinner on an ocean liner, banquet at the Union Club, moving pictures of timber and shipbuilding activities, a visit to the docks and other points of interest.

St. John and other eastern lumbermen are actively engaged making complete arrangements for the big gathering and a warm welcome will be extended the visitors by the civic authorities. Frank Hawkins of Ottawa, secretary of the Canadian Lumbermen's Association recently returned from St. John where he spent some time looking after preliminaries for the coming gathering.

In an official notice sent to the members the following of interest appears: It only remains for our members in Ontario and West to do their part by attending the convention. Apart entirely from the

social advantages, we are satisfied that a visit to St. John will not only be very entertaining, but will give you an insight as to what they are doing in St. John in the way of it being a most important shipping port, the exports amounting to some \$200,000,000 for 1918.

The Doings Day by Day

Monday, February 3rd.—Leave Montreal for St. John by special cars, 7 p.m.

Tuesday, February 4th.—Arrive at St. John after luncheon, (luncheon being served on the dining car.) The party will be met at the station in St. John by automobiles, and will be driven around the city, seeing the various points of interest, and also a considerable portion of the shipping of the port. A visit to the Atlantic Sugar Refineries is also being arranged, and after dinner a visit to one of the moving picture houses, to see some special lumber pictures, and after that a "bread and cheese" supper.

Wednesday, February 5th.—Convention assembles 10 a.m. and continues throughout the day, with a short interval for luncheon. The meetings will be held in the Board of Trade Rooms, St. John, which have been placed at the disposal of the Association.

Wednesday evening.—The 11th annual banquet to be held either in the Union Club, or if arrangements can be made, the banquet will take place on board an ocean liner in the harbor. This is a very attractive feature.

Thursday, February 6th.—Convention at 10 a.m. Board of Trade Rooms, after which our New Brunswick friends will entertain the members at luncheon. Special cars will be attached to the regular train, leaving at 6.10 p.m. for Montreal, due to arrive at the latter city 10.20 a.m., Friday, the 7th.

Caspar Lamarche Boosts the St. John "Meet"

Editor Lumbermans Canayenne:—

Im write a few line for tel you Im get your lettre las wik O K, an dat calendrier you sen me.

Have place de calendrier on de foot ma bed on de chan-tier an look dat pretee girl mos all de tam wen Im not sleep. She mak me tink ma wife Glorianna, wen we first marry.

But say: Wats dat ting you have steek on de back your lettre? "Go to St. John for the Convention, February 5 and 6."

You damwelright Im not go to St. John for nottings. Im go home for Chreesmas an it take me mos a wik for get back on de chanier. But mebbe praps dats not mean me but some dose sport Im see on de Lumberman Supper few wik ago on Toronto.

De Boss he write bout de chantier beezness an he say mebbe praps he come an see me before he go on St. John an he say again mebbe he not go on St. John because he have so much work for look after.

Ba Gosh, dats mak me tire hear her talk lak dat. Too much work. De work shes go along jus de same if he Boss are on her office or on de car. He have few clerk on her of-fice, do mos de work anyhow, an few day for pleasure are not do much harm.

An beside, he meet nudder feller from all over re coun-tree an talk bout her affair an de price dey gone ask for de stuff Im cut on Lac au Loup an nudder good mans lak me-self, cut some nudder place. An den, if St. John are not one dem scottax place, mebbe dey have leetle drink once a while for luck.

For sure Im lak go to St. John but de Boss are gone tel me bout date meat when he come back.

Im jus look on dat calendrier you sen me, for see wat are de date for to-day, an dat girl on it, she wink hees eye at me.

Ba Gosh; Im gone see Glorianna nex Sunday, sure.

Bien a vous,

Caspar Lamarche.

Lac au Loup, Quebec.

The present officers of the Canadian Lumbermen's Association are:

J. R. Booth, Hon. President, Ottawa, Ont.

W. Gerard Power, President, St. Pacome, Que.
 Vice-Presidents: Dan McLachlin, Arnprior, Ont.; Walter C. Laidlaw, Toronto, Ont.
 Hon. Treasurer—R. G. Cameron, Ottawa, Ont.
 Secretary, Frank Hawkins, Ottawa, Ont.
 Directors—W. G. Power, St. Pacome, Que.; Dan McLachlin, Arnprior, Ont.; Walter C. Laidlaw, Toronto, Ont.; W. E. Bigwood, Toronto, Ont.; Duncan McLaren, Toronto, Ont.; R. G. Cameron, Ottawa, Ont.; Gordon C. Edwards, Ottawa, Ont.; P. C. Walker, Ottawa, Ont.; A. E. Craig, Toronto, Ont.; A. E. Clark, Toronto, Ont.; Jas. G. Cane, Toronto, Ont.; W. M. Ross, Ottawa, Ont.; Arthur H. Campbell, Montreal, Que.; G. W. Grier, Montreal, Que.; Wm. Thos. Mason, Montreal, Que.; Alex. MacLaurin, Montreal, Que.; Angus McLean, Bathurst, N. B.; Sir D. C. Cameron, K.C.M.G., Winnipeg, Man.; E. C. Knight, Vancouver, B.C.; E. W. Hamber, Vancouver, B.C.

Lumbermen Section's New Officers

A. C. Manbert Succeeds J. B. Reid as Presiding Officer for the Coming Year

The annual meeting of the Lumbermen's section of the Toronto Board of Trade was held in the Council Chamber of that body on Friday, January 3rd. There was a large and representative attendance, and the proceedings were harmonious and enthusiastic. John B. Reid, Chairman, presided and, after stating the object of the gathering, business was proceeded with, the first item being the election of officers for 1919. Mr. Reid declared that he thought the honor should go around and some new blood should be injected in the section, which, since its inauguration three years ago, had done much to

A. C. Manbert, Toronto,
The newly elect chairman

John B. Reid, Toronto,
The first chairman of the Section

bring about unity and comity in both the wholesale and retail ranks, for the section embraces both bodies in its membership.

The report of the secretary-treasurer, H. Boultee, showed a substantial balance on hand. The election was conducted by ballot, and after several nominations had been made, the following officers were chosen for the present year.

Chairman—A. C. Manbert.

Vice Chairman—W. J. Lovering.

Sec.-Treas.—H. Boultee.

Committee (re-elected)—A. E. Clark, A. K. Johnson, W. F. Oliver, H. J. Terry and Hugh A. Rose.

Representative for election on Council of the Board of Trade—C. W. Wilkinson.

Representative for election on Board of the Canadian National Exhibition—John B. Reid.

Representative for Board of Trade Arbitration—W. J. Lovering.

It was decided to leave the matter of the annual banquet of the section over until a later date for further consideration, in view of the fact that the first annual meeting of the Ontario Retail Lumber Dealers' Association will be held at the King Edward hotel, Toronto, on Tuesday, February 11th, when the wholesale lumbermen of Toronto will entertain the visitors to a dinner in the evening.

Feeling reference was made to the long, continued confinement to his home of John Donagh, who has always taken a great interest in the affairs of the section. It was decided to send him flowers during the period of his illness, and also to forward letters of sympathy

to J. P. Johnson, on the loss of his wife, and to the family of Hugh Breinen, on the death of the husband and father.

Mr. Manbert, who has been vice chairman, and is now chairman, in assuming the office, took occasion to offer thanks for his appointment and to express the hope that he would, in some degree, be able to live up to the reputation created by his worthy predecessor, John B. Reid.

The Work of the Past Reviewed

On motion of A. E. Eckardt, seconded by W. J. Lovering, a cordial vote of thanks was tendered the retiring chairman, John B. Reid, for the able and courteous manner in which he had presided over the deliberations of the section during his term of office.

In replying, Mr. Reid expressed his appreciation for their confidence and said if his successor, Mr. Manbert, took as much pleasure through filling the position as he (the speaker) had he would be well repaid. During the three years that he had occupied the chair, Mr. Reid stated there has been much evidence of friendly, kindly feeling among the members, which would always linger as a pleasant memory of the work of the organization. He had been given hearty support and encouragement in his humble efforts to raise the dignity, standing and good feeling in the ranks and felt that the tone of the lumber business as a whole in Toronto had been elevated through the efforts of the section, which was now recognized as one of the best and most substantial in the Board of Trade organization. All the petty jealousies and misunderstandings which has cropped up in the business for many years had been eliminated. He would still do all in his power to carry on the good work and desired no other reward than that he had done his part to help bring about this better state of affairs and remove the suspicions and strife of the past. Mr. Reid added that he would have rather have this reputation than any other to hand down. The retailer should use his brains, collect his accounts promptly, not overthrow and keep his stock within reasonable margin. They should be honest and fair in all their dealings, and thus help the other fellow to make a living. There was business sufficient for all and when it was conducted in an open, above-board manner, all striving to do their best in a mutual, helpful spirit, the gospel of good-will was carried out. When it came his time to pass away he would rather have it said of him that he did what he could to make the world of business better and brighter for all engaged in it than he would to hoard money and die wealthy, leaving only the memory of a selfish, self-centred existence. Business has its ups and downs and should be done in an agreeable, social spirit, and toward this end he felt that the Lumbermen's Section of the Board of Trade had accomplished much during the last three years.

Mr. Manbert said that Mr. Reid had touched the keynote of the whole situation. In the creation of the better understanding, integrity, cohesion and general responsibility of the lumber trade they owed him a great deal and were perhaps inclined to accept the present happy condition without adequate appreciation of what had been done through the effective efforts of the section in general and more especially Mr. Reid. This satisfactory situation had not existed always, and, during his term of office, Mr. Manbert added that he hoped to supplement the good work of the retiring chairman.

Retail Lumbermen Will Meet in Toronto

The first annual meeting of the Ontario Retail Lumber Dealers' Association will be held in the King Edward Hotel, Toronto, on Tuesday, February 11th for the election of officers, the presentation of reports and the consideration of a number of post-war problems. The morning session will begin at 10 o'clock and the afternoon at 2 o'clock. On Monday, February 10th, there will be a general meeting of the Board of Directors, at which a full attendance is requested.

At the convention several important addresses will be delivered and aggressive action taken in a number of directions. President Thos. Patterson of Hamilton and the Secretary of the Association are working diligently to make the first annual gathering a distinct success. It will be remembered that a general meeting of retail dealers was held in Toronto during the progress of the Canadian National Exhibition, in September last, and was attended by over 100 visitors. At the forthcoming assembly, on February 11th, it is hoped that there will be an even larger attendance at matters of great importance will be considered. The delegates will be tendered a banquet by the wholesale lumbermen of Toronto in the evening and a most enjoyable and profitable time is anticipated.

It is particularly desirable that all retail lumbermen should make it a point to visit Toronto on Tuesday, February 11th, as there will be many topics discussed that affect the welfare and advancement of their interests in general. It is only a year ago that the O. R. L.D.A. was organized and during the past twelve months it has made substantial progress, the present membership being in the neighborhood of 140.

Retail Lumbermen Expect Good Building Year

Turnover During 1918 was Better Than Many Expected—Opinion Prevails That Lumber Values will be Maintained—How Costs Are Climbing

It is always interesting to review the operations of the past year and to take a look out over the new one. On the whole, during 1918, business was pretty fair with the retail lumbermen, while some report the largest turnover since the outbreak of the war. Reports received from various dealers of Ontario and Quebec and the Maritime provinces indicate that while there was no great activity in the building line, still from one source and another, considerable trade came their way. There was a good deal of work done in the way of repairs, alterations and additions, while special lines of war work and factory extensions afforded an outlet for much of the stock of the yard men.

The cost of doing business has naturally been ascending all the while, but the majority of retailers have been getting prices commensurate with the augmented expense of maintaining their yards, equipping them and serving the public in an efficient way. The outlook for 1919 is considered to be of bright character and the retail lumberman faces the coming season with confidence and the largest measure of satisfaction that he has felt since 1914. The prospects for building are exceptionally promising. There will be erected new houses in many industrial centres, repairs long neglected will have to be undertaken, farm buildings will require overhauling, new garages will be put up and it is believed there will be extensions of one kind and another that should make 1919 a banner year in local trade. There is not a gloomy note heard in any part of the country and the horizon, so far as it can be scanned at the present time, is clearing. Many retailers have been kind enough to express their views on the prospective situation and, out of a large number of letters received, the following representative opinions will be read with interest.

Scarcity of Steel Helped Timber Sales

Patterson & Crosthwaite of Hamilton, in regard to the activities of 1918, assert: "The demand for material for dwellings, stores, and office buildings has been very limited; in fact not 50 per cent. of the normal, and our trade has been very largely the result of extensions of factories, and certain lines of material used in their usual routine. The fact that we are a large manufacturing centre has probably made this a more conspicuous feature than in most cities. The scarcity of steel during the past year has also helped the timber sales materially and the wood sash has been in fair demand for factory purposes. Wood tanks for acid solutions and other purposes have been a conspicuous feature of our 1918 production.

"With regard to the stocks carried here we should judge they are about an average as compared with 1916 and 1917, but lighter than in previous years. The feeling that we retailers have is that we will not be able to buy anything coming out of the bush this winter at any reduction in price, nor do we anticipate any material advance.

"The closing year has been of a particularly trying nature owing largely to the unsettled condition of the labor market, and the fact that men were able to command such high wages on munition work has naturally produced a discontented condition which caused a great deal of friction and annoyance.

"The cost of production has materially increased, but fortunately the demand has been such that we have been able to command fair returns for what we have handled, and we hope that 1919 will produce less worries even should profits dwindle.

"Contractors have had a very good year and are meeting their bills promptly—in fact, better than for 1917. The outlook for the coming season is fairly bright but we expect that there will not be anything done that can be postponed in anticipation of an approximate resumption of normal prices."

Believes Lumber Will be at Premium

The Laberge Lumber Company of Sudbury, declare: "We have handled about the same quantity of material this year as we did last. There was not much repair work on account of the high cost of material. The mining companies built in the neighborhood of 100 houses, which kept the factories and the contractors quite busy. The stocks around this district are very small, and quite a few lines are not to be had at any price, so that we think lumber will be at a premium in the spring.

"We believe that it will cost us from 5 to 10 per cent. more to do business this year than it did last, on account of the high wages

we have to pay for our office staff, superintendent, foremen, etc. The prices that are obtaining for our various lines are about commensurate with the advancing cost. Payments are very satisfactory."

Conditions are Right for Good Steady Trade

J. B. Mackenzie, of Georgetown, Ont., states "As regards the volume of business done in 1918, compared with 1917, we find by comparison of our books that we have turned over as much, if not more, material than the previous year, and that our total, measured in dollars, is much more. We had three new factory buildings this season, and several new farm houses. A great deal of repair work had to be left over as we did not have the help to get it through. We have had no shortage of materials as we carried a heavy stock.

"Regarding the prospects for 1919, while nothing of a large nature is in sight, we have confidence that conditions are right in our community for a good, steady trade."

Expense of Doing Business Creeps Up

The Wm. Shirton Company of Dunnville, Ont., observe that trade with them during 1918 was not as large in volume as in 1917, falling off about twenty-five per cent. They add: "Building was light and repair work although probably a little heavier than the year before did not make up the difference. The outlook for 1919 is brighter although the continued high prices will prevent many people from building. Repair work will be quite heavy, as it will be necessary in many cases for this work to be no longer neglected.

"The expense of doing business in 1918 was considerably more than in previous years. Fuel, taxes, belting, machinery, wages, and, in fact, everything necessary for the carrying on of our plant advanced very materially during the year. We found it hard to keep step with our prices to offset the additional expense. We feel that we did not always get prices commensurate with advancing costs as we were satisfied that we would lose custom and "half a loaf is better than no loaf at all." The demand was not sufficient to warrant us getting a fair profit.

"The payment by our customers was well up to the average up to the last two months, when it has seemed difficult to collect. This is no doubt partly due to the influenza epidemic. Many of our customers have not been able to make their payments promptly on this account. Our stock is well filled as we anticipate a shortage of certain grades of lumber in the spring. We may be mistaken in this but we have been led to believe that this will be the case. We believe that prices will be fairly stationary and do not look for much change either way for, at least, the first six months of 1919."

Volume Was Ahead of Previous Year

The Ingleby-Taylor Co. of Brantford, say: "Business during the year 1918 has been very good with us and the volume considerably over that of 1917. There has not been a great deal of house building, but considerable repair work and factory extensions. We have not experienced any decided shortage in the grades of lumber which we require in our business and no doubt look for any noticeable advance in prices.

"We have found the expense of doing business materially increased during the past year but consider the prices which we are obtaining to be commensurate with costs thus far, and have no complaint regarding the way payments are being met by our customers.

"It would be difficult for us to state anything definite regarding the outlook in the building for 1919, but feel that with the number of good factories which have grown up here in the past few years, and with the present scarcity of dwelling houses, that building is bound to go ahead."

Thinks Prices Will be Very Firm

Harry Hazen, of Tillsonburg, Ont., observes: "In consideration of the ups and downs of the past season I don't think we should have any kick coming. Shipping, of course, has been slow, but I have been very fortunate by ordering ahead and managed to avoid delay to a certain extent. In spite of high prices of material and labor I have found my business gradually increasing.

"As to the future I must say that high prices are going to continue in all wood material. I had the pleasure of a trip up in our

Northern Ontario this fall and, visiting some of the principal mills, I was surprised to see so little dry stock on sale.

"Now, if our country moves ahead, which we are looking forward to, and our towns and cities start to build, that will mean material and a greater requisition than ever, to say nothing about our export trade. As supply and demand control the price of everything, what are we to look for but a firmer price than ever."

Expects Much More Business During the Coming Year

J. O. Chalifour, secretary of the Quebec City Retail Lumber Dealers' Association, writes: "There was very little building and repair work done in our city during 1918. If some retail dealers succeeded in doing the same amount of business as they did in 1917 it was through the efforts they made to get new business—by selling outside of the city and for other purposes than for house building. However, we hope for a large turnover in 1919. There was so little structural work carried on during the past year that one cannot easily expect any less during 1919. On the other hand, we have every reason to believe that there will be a good demand for residences owing to the return of our brave soldier boys. In not a few instances we have seen two or three families (with some of their members overseas) dwelling together in one tenement, and I would like to know how many young men, willing to get married, did not do so owing to the war? How many industries have been forced to reduce production on account of the shortage of labor? We have every hope that the retail lumber dealer can confidently look forward to more business during 1919.

"We are inclined to think that stocks are about the same as they were last year, but we are in no position to make any positive statement on this point. To our knowledge the present demand for lumber is smaller than it was at this date in 1918 and for that reason we are of the opinion that there may be a slight drop in prices. However, it is difficult to make any prediction until spring. The wholesaler should be the men to answer this question. He knows what he is going to offer and what he expects to sell as well as what stock he has on hand. We may add that the cost of doing a retail lumber business was last year heavier than the previous twelve months, but just what the percentage of increase is, we cannot tell at present, as our books are not finally made up yet. Collections from building contractors have been rather more difficult, but from other customers payments have been better than usual."

Does it Pay to Operate Planing Mill?

Mr. Chalifour touches upon a vital point in the retail lumber line when he inquires if retail dealers generally find it profitable or advantageous to operate a planing mill in connection with their business, and adds: "We do not have a mill and we find its absence at times, an expensive thing. It puts us under the obligation of buying our stock in the rough and, therefore, we have to pay more freight, more insurance, require more space, pay more taxes, etc.

If the retail lumberman could get all his milling done in transit or by the saw mill man or wholesaler from whom he buys his stock, it seems to us there would be entire satisfaction and we would prefer not to own and operate a planing mill. Sooner or later the planing mill will be part of the equipment and business of every saw-mill owner and wholesale lumber dealer, the same as generally exists in British Columbia, and if all mills adopted uniform standard sizes the change would prove a decided advantage to the trade. We believe that, as in other lines of business, the retail lumber dealer should be able to get all the stock that he requires finished and ready for sale. Then he would only have to have a warehouse and sheds. Just think how much would be saved in transportation charges alone in these days of high freight tariffs. How much less would it cost to have the stock of say, ten retail lumbermen milled at one plant rather than each having his own mill. This is a pertinent and important question to the live, retail lumber merchant and we would like to see an expression of opinion in your columns on the points which we have briefly outlined.

Scarcity of Houses in the North

A. J. Young of the Young Lumber Co., North Bay, Ont., says that the amount of business done during the past year was about the same as in 1917. A considerable quantity of material was used by the railways for the building of houses while the demands for timber from the mining section for shoring, stopeing, shafts, etc., was fair. Collections, on the whole, had been good. While it was too soon to make any predictions, Mr. Young added that there should be a good building season, as more houses are needed, not only at North Bay but at several other points. With the cost of getting out timber is as high as it is and the cut will be only about two-thirds of what it was last year, in the district, (or only about half of what it was in normal times—that was previous to the war)—he did not see how prices could come down. Replacement values had to be taken into consideration and, with increased demand and

shortened supply, he believed that present quotations would hold. The Young Co. are operating three camps this season, taking out about seventy-five per cent. birch and the remainder jack pine, much of which will go into railway ties.

Barrett Bros., of Ottawa, report that although their returns are not finally made up for 1918, they believe that they have done as much business as they did in 1917—in fact a little more. They state that they have endeavored to advance their prices sufficient to cover the increased cost of doing business. At the present time they add that it is not possible to give a definite opinion in regard to the building prospects for 1919 in Ottawa, but the prospects are auspicious.

How Eastern Firms Found Conditions

Although building business in 1918 was larger than in the preceding year, it was a long way below normal in Montreal. Lumber retailers naturally depend for the main portion of their business upon building operations, and it therefore follows that trade in 1918 was not brisk.

"In my opinion," said Mr. William Rutherford, of Wm. Rutherford & Sons Co., Limited, "we cannot expect people to start building houses while the high prices of material and labor obtain. Many are waiting for reductions in these prices. The past year was better than 1917, but it was still a poor year, owing to the lack of construction. So far as we are concerned our stocks are about normal. The question of supply and demand was a factor in the matter of price. Collections were fair."

Mr. J. G. Shearer, President and managing director of the James Shearer Co., Limited, declared: "Prospects for building depend as to whether the Government intends to go into the matter of industrial housing and public works of all descriptions. It is, I think, up to the Government to formulate a plan under which they would guarantee any loss by depreciation to those who are willing to build. I believe that the Government should adopt a scheme of industrial housing, through the municipalities, and arrange at the end, say, of five years, to make a thorough appraisal of the value of such houses erected under the scheme, and make good any depreciation which has occurred. There is little chance of people building now, owing to the high price of materials unless such scheme as I have suggested is carried out. Prices of lumber for 1919 will naturally depend upon the question of supply and demand; they should be higher, but it is impossible to foretell the conditions which will exist. Owing to the comparative paucity of building last year it was hard to get prices to correspond with the increased cost of doing business. Retail prices in Montreal have been practically wholesale market prices, and retailers were in a position to do business on these terms, as they were trading to a considerable extent on old stocks."

Mr. I. Dupre, of L. Villeneuve & Co., Limited, states: "I do not expect that the retail lumber business will show any appreciable improvement for several months, unless, of course, construction should increase. Prices of retail lumber will, I think, be about maintained; I certainly do not think they will decrease. Our stocks are light. The cost of doing business in 1918 increased, and although we obtained good prices for our lumber, they were not equivalent to the increased cost of carrying on business. Collections were fairly good."

Mr. Davis Discusses the Profit End

"Business during the past year with us has been about the same as the year before, owing to the operation of the shell box business," said Mr. Mayno Davis of the McAuliffe, Davis Lumber Co., Ottawa. As regarding stocks Mr. Davis added that he had sufficient on hand and, as a matter of fact, considered his yard stock a "very nice one," and better than during a corresponding period last year. "I think prices generally will stay as they are. Of course, some lines principally spruce, are weaker, but others, such as white pine, are growing stronger." The situation is just this, if you want anything you haven't got, you have to pay more money for it."

"Collections on the big accounts are good, but on the smaller account they are slow and have been so ever since the commencement of the war." As regarding the return of profit Mr. Davis points out that in doing business with forty dollar lumber in order to get the same percentage of profit it is necessary to sell twice the value as if one was dealing in twenty dollar stock. "You take twenty dollar lumber and sell it from twenty-six to twenty-eight dollars per M, and you make money. Take forty dollar stock and to make the same percentage you have to dispose of it at fifty-two or fifty-six dollars to get the same margin. It is a different proposition and when you turn it over with a profit of twelve or sixteen dollars the wholesaler thinks you are making a lot of money," concluded Mr. Davis.

Looking for Steady Improvement.

The Guelph Lumber Co., of Guelph, of which James Harrison is manager, remarks: "As to the trade possibilities in the district of Wellington county for the New Year, and also as to how 1918 business compared with the previous year, the general building trade was much

lower last year than 1917. Although there was a lack of new buildings, yet there was considerable repair work and small addition work going on all the time, both in the towns, cities, and farming district, and while we hope and look for an improvement this year, we can not see how it will be of a very decided nature.

"In conversation with many prospects we find that the feeling is people are looking for easier prices, if not immediately, then sometime during this year; consequently they will hold back and only do whatever is actually necessary.

"As to lumber stocks, most of the yards are carrying all that is necessary—for the volume of business that is offering. We do not anticipate any material change in prices in 1919, either up or down. When one considers that the product being marketed this year was produced at last year's costs, and while the number of men available are more numerous than last year, yet there does not appear to be any drop in the wage scale; so that looking at all points one can not reasonably expect very much change this year in present prices.

Regarding the expense of doing business, etc., it certainly has cost more in 1918 than formerly, and the retail prices have not kept pace with these extra expenses. Settlements have been good, and accounts have been cleared within a reasonable time. The outlook in this district is however most encouraging for steady growth, but we feel we will not get back to anything like normal conditions till 1920."

The volume of business transacted by George M. Mason, Ottawa, during the past year compared favorably with that done during 1917. "Business was fair," said Mr. Mason. "We have on hand, perhaps, a little more stock than we had a year ago. I think it is too early yet to predict what is going to happen in the future. At meetings of Associations we hear a lot of optimistic talk, but so far as I have been able to find it has not proved itself." Mr. Mason was strongly of the opinion that building would not show any great activity on account of the high cost of lumber and other building materials. Collections were reported as being very satisfactory.

Price Changes Kept Many Guessing.

The Ludam-Ainslie Lumber Co., of Leamington, Ont., report: "Business during the past year with us has been fully up to that of 1917. The various changes in the price of material and labor kept one guessing as to how to adjust prices. Of course, in our retail business, in dealing with the contractors, the price prevailing at the time the contract was made has to be maintained to the completion of the work, so it seemed necessary this year to always keep your stock fully up to cover your obligations. We do not know as to the outlook for 1919. There seems to be an optimistic feeling. The entry of the British Government into our market for a large amount of timber may materially affect the supply and price of same, so we are quite in the dark as to what this year of 1919 may bring forth. We wish that we were able to tell you, then we would be able to shape our own course.

Many Trade Restrictions Cancelled

Important cable dispatches have been received by Mr. G. T. Milne and Mr. F. W. Field, the British Trade Commissioners, at Montreal and Toronto respectively, from the Imperial Department of Overseas Trade in London, pointing out that since the armistice was signed many restrictions on commerce have been withdrawn, while in the case of those which remain, licenses are being granted much more freely than previously. Particulars regarding these relaxations will be published weekly in the "Board of Trade Journal," the official organ of the Imperial Government for notices regarding trade.

Orders placed during the war period now have good prospects of being executed and arrangements for new business should be made without delay.

The following relaxations in particular should be noted:

1. Permits to manufacture and Priority Certificates in connection therewith are no longer necessary.
2. Firms are at liberty to accept civil or commercial orders for immediate execution, thus freeing the engineering industry among others, for commercial work.
3. All the principal kinds of raw materials may now be used for the commercial manufacture of goods for export, but these raw materials themselves may not be exported in certain cases without licenses. Among those to which this conditions applies are the following: Aluminum, brass iron, nickel, steel, antimony, copper, lead, spelter or zinc, tin.

In general, restrictions on the export of manufactured goods have been removed, while they have been retained in the case of raw materials.

The following list indicates the most important items the export

of which was formerly prohibited to all countries, but are now permitted to be exported to any part of the British Empire:

Articles of aluminum, articles—manufactures of asbestos, belting, cotton—including belting impregnated with balata or rubber, bicycles—complete, bicycle tires and parts, boots and shoes (except children's with soles or uppers of leather), brooms, brushes (except tooth brushes), copper—and manufactures of—except wire, bars, plates, rods, sheets, tubes—galvanized sheets—corrugated or flat, grindstones, glass for optical instruments, hand tools for agriculture, hollow ware, domestic—of iron or steel plate, iron and steel rivets, nuts and screws, iron and steel wire cloth, incandescent mantles and rings, jute cordage and twine, padding and webbing, twist and piece goods, linoleum, magnesite and magnesite bricks, magnetos and parts, nails (wire), photographic materials, rubber manufactures—except surgical gloves—surgical bandages and dressings, steel sheets (black), tools (small), wagons and carts—and parts, wool and hair—manufactures of—not to include raw wool or yarns.

Certain factors will continue to hamper the export trade, notably (1) shortage of labor till the army is demobilized, (2) shortage of tonnage, (3) the need for reorganization of plant in certain industries before resuming normal work, but it is considered that the effect of these factors will diminish greatly in a few months.

Mr. Rose is After Portable House Business

A. G. Rose, Ottawa

A. G. Rose, who is Vice-Chairman of the Canadian Timber Products Association, which body recently held a meeting in Ottawa to consider the problem of export trade, is now in England with a view to securing orders and to survey carefully the ground. He will keep in close touch with the members of the Association. One particular feature which will be pushed will be landing contracts for portable or knock down houses from the British and French governments. Mr. Rose, who is well known to the lumber industry in Canada, has for many years been prominently identified with the firm of James Davidson's Sons, Ottawa, and is a director of the Ontario Retail Lumber Dealers Association, in the affairs of which he has always taken a deep interest.

The idea of his going to London and Paris is to be on the ground floor in case any orders for these ready cut houses are given out. He will also get in touch with Lloyd Harris of the Canadian Mission, who has an office in London, and will report back anything that occurs to F. P. Potvin, of Midland, Ont., secretary of the Canadian Timber Products Association, which embraces in its membership sixteen representative firms. It is estimated that the combined capacity of the factories interested in the production of portable houses, will be about two hundred per day. An aggregate order of ten thousand houses is the objective, and it is hoped to secure the business in big blocks. There are two types of houses being aimed at, and the number of feet in each house will be about 4,500. One type of house has two rooms, being put in at \$375; the other has three rooms and is being listed at \$415. The principal woods used in their construction will be spruce, pine and hemlock.

The Canadian Timber Products Association although only in existence a few months, is certainly losing no time in getting after export business and in the selection of Mr. Rose as their representative abroad, they have chosen a capable and aggressive man.

Death of Julius E. Waterous

Julius E. Waterous, one of the founders of the Waterous Engine Works Company, Limited, Brantford, passed away recently in that city in which he was one of the industrial leaders. He was connected as mechanical engineer and vice-president of the Waterous Company until he retired from active business in 1910. The late Mr. Waterous was 75 years of age and is survived by his wife and two sons, Reginald and Bertram, who have just returned from overseas. Mr. Waterous was connected with the installation of a number of waterworks plants in various cities in Ontario and was an outstanding figure in the development of the great industry bearing his name, which is so widely known in connection with sawmills, pulp and other lines of machinery.

Personal Paragraphs of Interest

R. E. Butler, of the R. E. Butler Lumber Company, Woodstock, Ont., who has been ill for some time, is able to be around again.

A. H. Campbell, of the Campbell-McLaurin Lumber Co., Montreal, was in Toronto recently on business.

J. P. Dupuis, president of J. P. Pupuis, Limited, Montreal, has left for a trip to the South, for the benefit of his health.

R. F. Carter, of the Fesserton Timber Co., Toronto, who has been ill with influenza and pneumonia for some time, is now convalescent.

Mr. Kaye, representing Smith, Fassett & Co., North Tonawanda, N.Y., was in Toronto recently calling upon the trade.

J. L. Campbell, of Campbell, Walsh & Paynes, Toronto, has returned after spending some time at Atlantic City for the benefit of his health, which is much improved.

R. Halliday, late chief clerk in the office of M. H. Brown, district freight agent, C. P. R., Toronto, has taken a position with the R. Laidlaw Lumber Company, as assistant to A. E. Eckardt.

R. B. Elgie, of the Elgie and Jarvis Lumber Co., Toronto, who was in New York for some time undergoing medical treatment, has returned home. He is feeling much better and is able to be at his desk once more.

W. H. Harris, of Toronto, left recently to attend the Ohio convention of the yellow pine wholesalers in Cincinnati, and will spend some time at the Harris-Brooks Lumber Company's mills at High Point, Miss.

Samuel McBride, wholesale lumber dealer, Toronto, who was an alderman for several years and in 1918 was elected a Controller, was at the recent municipal elections again returned as a member of that body, standing fourth on the list in a field of seven candidates.

J. W. Harding, of E. M. Nicholson & Co., wholesale lumber dealers and exporters, Board of Trade, Montreal, has returned from the front. He was a voluntary worker for the British Red Cross, driving an ambulance wagon. Mr. Harding was away for eight months.

M. E. Casey, who has been for ten years the sales agent in the Montreal district of the P. B. Yates Machine Co., of Hamilton, Ont., and Beloit, Wis., will in future represent the company in Eastern Ontario, Quebec, Maritime Provinces and Newfoundland, doing business in his own name at 263 St. James Street, Montreal. Mr. Casey will also represent other Canadian and United States manufacturers in iron and woodworking machinery and supplies.

Capt. Arthur W. Grafftey, the son of W. K. Grafftey, of the Montreal Lumber Co., Limited, has been awarded the Military Cross. He was wounded at Courcellette in September, 1916, and after returning to Canada on convalescent leave, joined his battalion in France in July, 1917, when he was promoted to a Captaincy and given command of "D" Company of the 42nd Battalion. He was the first British officer to enter Mons, some hours before the Armistice was signed.

Frank W. Gordon, of Vancouver, Western representative of Terry & Gordon, spent a few weeks in Toronto recently with his brother, A. E. Gordon, and left for the West recently in company with H. J. Terry, who will visit many of the company's connections in the Pacific coast province. Mr. F. W. Gordon reports that the majority of the mills on the Pacific coast are closed down at the present time and have been busy taking inventories, but that they are all looking forward to an active season during 1919 and confidently expect that a big export business will be developed.

N. L. Smith, late of Guelph, has been appointed assistant manager of the Riverdale Lumber Company, Queen Street East, Toronto, succeeding Hugh Brennen, who passed away on November 1st last. Mr. Smith is an experienced lumber salesman and is thoroughly familiar with the merchandising methods, having been with the Wm. Laking Lumber Company for fourteen years and covering the larger part of Ontario, west of Toronto. He has been temporarily in charge of the Riverdale Lumber Company during the past few weeks, but has now been permanently appointed. His work in Western Ontario is being looked after by George Kinnon, of the Wm. Laking Lumber Co.

Sir Douglas Cameron, of Winnipeg, who is a member of the executive of the Canadian Lumbermen's Association, and a leading figure in Pacific Coast timber operations, spent a few days in Toronto recently on his return from New York to the West. Sir Douglas is the provisional president of the Returned Soldiers' Co-operative Lumber Company, which is being incorporated and has for its object the launching of returned men in the lumber business in B. C. He reports that good progress is being made in the work, but, of course, the scheme is a large one and its consummation cannot be effected for a considerable time. Mr. Thomas Meredith is at present in England on matters connected with the great enterprise. Sir Douglas is looking for a large export timber trade from B. C. during the coming year and was particularly gratified to learn through the newspapers that Great Britain had placed such a large order for Canadian wood products.

His two sons have been overseas for a long time, the younger returning a few weeks ago after serving on the R. A. F., latterly as an instructor. The other boy, who is with the artillery in France, is now with the Army of Occupation and may remain abroad indefinitely.

Has Spent Forty Years in Lumber Business

Harry Pedwell, Reeve of Thornbury, is Public Spirited Citizen Who Has Done Much For the Community

Harry Pedwell, Thornbury, Ont.

Harry Pedwell, who for nearly forty years has been connected with the lumber and saw mill business in Grey County, and resides in Thornbury, was in Toronto on a visit when the nomination of municipal candidates for the year 1919 took place. He was re-elected Reeve of the village by acclamation which shows that the office sought the man and not the man the office. This will make his third term in the chair, although he has been identified with the council for a long period, being a "town-father" when Thornbury was incorporated. Mr. Pedwell has never been defeated in a contest with the exception of one, which was a long while ago. He has had an interesting and successful career and was born in Wales in the district in which Lloyd George, the famous British

statesman, was brought up. Coming to America as a young man, he had a dime left in his pocket when he landed, but was not long in finding a job. After spending some months in the United States, he located in Collingwood, following for a considerable time the trade of machinist blacksmith. He then moved to Thornbury, which is 28 miles from Owen Sound and 14 miles from Collingwood. There he operated a blacksmith and carriage shop, which he subsequently traded for a saw mill, which he conducted for many years. He also ran mills at Owen Sound and in Keppel township, and cut up large quantities of hard woods, such as maple, elm and basswood. At Thornbury white pine was at first converted into lumber and then attention was devoted to other timber. A large proportion of the stock was secured at Tiny Beach, on Georgian Bay and towed across to Thornbury. Mr. Pedwell also owned limits in the Bruce Peninsula, and during some seasons cut as high as five and six million feet. When the limits gave out the mill was removed to the country and finally dismantled. Mr. Pedwell has, however, always conducted a retail lumber yard in Thornbury and has a successful one to this day.

The wholesale end of the business was taken over by the Pedwell Hardwood Lumber Co., and eventually removed to Toronto.

Mr. Pedwell is a public spirited citizen, and devotes much time and attention to the welfare and progress of the community in which he resides. His patriotic efforts during the war, and the fuel famine of 1918 will not soon be forgotten. To the first man who enlisted with the 148th (Grey County) Battalion he gave a present of one hundred dollars and to every one who joined subsequently, he personally donated a five dollar gold piece. He also secured coal for Thornbury when the stock ran out last winter and took an active part in the Victory Bond and recruiting campaigns. Mr. Pedwell is a prominent member of the Masonic order, and some years ago was an enthusiastic curier.

Although nearing the three score and ten mark he is enjoying excellent health and is active as ever in forwarding the interests of the place in which he owns a very comfortable home. Three sons are engaged in the lumber business in various parts of Ontario.

Who Can Supply This Bill of Timber?

There has been received at the office of Fred W. Field, British Trade Commissioner, Confederation Life Building, Toronto, on inquiry from Egypt for the following timber:

Pitch or Oregon Pine, 103,717 cubic feet;
Hickory, 7,330 pieces;
Pines (Beams) 468 cubic feet;
Mahogany, 4,214 cubic feet;
Satin Walnut, 350 cubic feet.

The different dimensions and detailed list will be made known to any one making inquiry, all prices to be f.o.b. port of shipment. Mr. G. T. Milne, H. M. Trade Commissioner, 367 Beaver Hall Square, Montreal, or Mr. F. W. Field, H. M. Trade Commissioner, 257 Confederation Life Building, Toronto, will supply the name and address

Lumbermen Who Make Provincial Laws

Representatives in Legislative Assemblies of New Brunswick and Nova Scotia Who Mould Public Opinion and Handle Products of the Forest

The "Canada Lumberman" in a recent issue had the pleasure of presenting its readers with a group portrait of the lumbermen legislators of the Province of Ontario. This was the first of a series which will appear, covering the industry from coast to coast. In the December 15th issue there was featured the pictures of the representatives of the people in the Maritime Provinces who follow the calling as manufacturers, wholesalers or retail dealers.

A short reference to the business and public activities of these gentlemen will be read with much interest considering that they are well and worthily known, not only to their constituents, but to the industry as a whole. The majority of them have spent many years in the calling in which they have achieved a large measure of success, and at the same time they have found it possible to devote much thought and attention to the interests and welfare of the people. Public spirit is an admirable quality in any citizen and when it manifests itself so strongly among the followers of any trade as it does in the ranks of the lumbermen, reference is of more than a passing interest. Several of these gentlemen have attained the status of Cabinet Ministers or Speakers of the Legislature, and enjoy the confidence and esteem of a wide circle of friends.

In New Brunswick Hon. E. A. Smith is Minister of Lands and Mines. Hon. Wm. Currie is the Speaker of the Legislative Assembly, and the lumbermen members of that chamber are Hon. John P. Burchill, former Speaker, Thos. B. Carson, John L. Peck, Jas. K. Pinder, Geo. H. King, B. F. Smith, W. S. Sutton and John A. Young.

In Nova Scotia, Hon. Fulton J. Logan is a member of the Legislative Council, while Hon. Robert M. MacGregor is a member of the Executive Council without portfolio. Rufus S. Carter, who represents the historic county of Cumberland, in the local house, is also a well known lumberman.

Hon. E. A. Smith, is a lumberman, a dentist, a general merchant, and a cabinet minister. He holds the portfolio of Lands and Mines, and since entering upon his duties in that responsible position, has inaugurated several progressive moves, including the Forest Act and the Forest Fires Act, which were passed last session. The new policy of the sale of timber licenses on a stumpage basis instead of a mileage was inaugurated by him. Other important matters successfully carried out by the head of the Lands and Mines Department are the new timber regulations of the province, the details of which were fully set forth in the September 1st issue of the "Canada Lumberman." Born in Shediac, N. B., in 1864, Hon. Mr. Smith, or "Doctor," as he is familiarly known to his friends, was educated in a private school at Charlottetown, P. E. I. He obtained the degree of Doctor of Dental Surgery from the Pennsylvania Dental College. Hon. Mr. Smith occupied the mayor's chair in Shediac for two years. A Liberal in politics, he has been a member of the Legislative Assembly for some three years and has pushed his way steadily to the front by reason of his energy, ability and administrative capacity.

Hon. Wm. Currie, Speaker of the New Brunswick Legislative Assembly, over which body he has presided with distinction and acceptance since May, 1917, is a leading figure in the lumber arena. He is vice-president and manager of the Continental Lumber Company, of River Charlo, who manufacture dimension timber, lumber, cedar shingles and railway ties. Hon. Mr. Currie has been a member of the Legislative Assembly for many years, representing Restigouche county. He was first elected in 1907 and again in 1908, occupying the seat until 1912. Five years later he was once more returned at the general election. Politically he is a Liberal and in religion a prominent member of the Presbyterian church. He is identified with a number of fraternal societies and is a public spirited and highly esteemed public servant and a capable business man.

Hon. John P. Burchill is a member of the firm of George Burchill & Sons, lumber and general merchants, South Nelson, Miramichi. He is president of the Miramichi Steam Navigation Co. and the North West Boom Co. Previous to entering upon parliamentary life, he was a member of the Northumberland Municipal Council for several years and also warden of the county. He is the hero of no less than ten political fights, in eight of which he has emerged triumphantly. Mr. Burchill who was Speaker of the Legislature from 1892 to 1899 is a native of the province, being born in 1855, and is the broad-minded and enterprising representative of Northumberland county.

Thos. B. Carson hails from St. John County and celebrated his fiftieth birthday a few years ago, by being elected a member of the New Brunswick Legislature in the Conservative interests. He was returned in 1917, but previous to entering upon his legislative career he was warden of St. John municipality for two years, and is still a member of the council. He is a lumberman, a contractor and a builder, with a wide circle of friends and enjoys the confidence of his associates. Mr. Carson resides in West Quaco.

John L. Peck, who resides in Hillsboro, N. B., is a director of the Albert Lumber Company, Hillsboro, where he has extensive business interests. He is a member of the Lewis Peck Company, general merchants, and is a Conservative in politics. Mr. Peck was born in 1857, at Hopewell Hill, N. B., and in addition to his interests in lumbering, woodworking and mercantile lines, he is engaged in banking. His first political fight was in 1897, when he was an unsuccessful candidate, but he was returned in February, 1907, after a spirited contest. Of the four candidates the highest man received 984 votes and the lowest 903. Mr. Peck stood second, with 967. It is most unusual to see four aspirants for public office come within 81 votes between the highest and the lowest. Mr. Peck represents Albert county.

George Herbert King, who represents Queens County, is a son of Hon. George Gerald King, who has been a member of the Canadian Senate since 1896. Senator King is now in his 82nd year, but is enjoying excellent health, returning recently from a long trip to the West, going as far North as Skagway, Alaska. His son George Herbert King, was returned to the New Brunswick Legislature in 1917. He is associated with his father in the King Lumber Company, of Chipman, which organization manufacture pine, spruce, hardwood lumber, as well as lath, shingles, sheathing, etc., and are dealers in general merchandise. They have built up a large and extensive business and have always been warm supporters of the Liberal party, being well spoken of by a wide circle of friends.

Jas. K. Pinder is the Conservative member for York, and during his youth went to Fredericton to serve as an apprentice at carpentry and building with Alex. Mitchell, a noted carpenter in those days. Mr. Pinder continued to reside in the Capital city of the province for sixteen years and in 1871 removed to Temperance Vale. He established a lumber and milling business in which he has ever since been engaged. Temperance Vale is located in the parish of Southampton, and for nineteen years Mr. Pinder occupied a seat in York County Council and was also warden of the municipality. He was first elected to the Legislative Assembly in 1892, and among the candidates on the opposing ticket who went down to defeat were the late Hon. A. G. Blair, then premier of New Brunswick and three of his colleagues. Mr. Pinder was re-elected three years later, but was unsuccessful in 1898. However, he got back into public life in 1908, and he was returned in 1912 and 1917. Mr. Pinder is president of the Southampton Railway Company.

Benjamin F. Smith is a successful lumber and produce merchant and started his business career very early. He believes that persistency wins in any good cause and was a candidate in several campaigns before being elected for the constituency of Carleton, in 1915. Mr. Smith resides in East Florenceville and his ancestors were the descendants of the United Empire Loyalists. He is a Conservative in politics and a Baptist in religion, and his natal spot is Jacksonville, N. B., where he was born in 1865.

Wm. S. Sutton, like many other New Brunswick legislators, served an apprenticeship in municipal circles before entering the higher arena of activity. He was a member of the Council of Woodstock for two years and mayor of the town in 1915 and 1916. He was first elected to the Legislature in September, 1916, for the county of Carleton, in the Conservative interests, his colleague being Benjamin F. Smith. Mr. Sutton has resided all his life in Woodstock, where he is manager of the Woodstock Woodworking Company, and also connected with the Woodstock Foundry Company. The Woodstock Woodworking Company manufacture doors, sash, mouldings, flooring, school desks, church pews and building material of all kinds and carry large stocks of quartered oak, white wood, cypress, hard pine and other native

woods. The slogan of the firm is "We can sell in competition with any firm in Canada."

Hon. Fulton J. Logan, member of the Legislative Council of Nova Scotia, has been identified with the lumber business for many years. A former member of the Legislative Assembly he was appointed to the Legislative Council in May, 1916. He is a Liberal in politics, and has always been a public-spirited and influential representative. Hon. Mr. Logan was born in 1857, in Colchester County, and is of Scotch and English extraction. His home is at Musquodoboit.

John A. Young, of Taymouth, N. B., follows the vocation of a lumberman and a farmer. He has been interested in the lumbering business all his life and owns and operates at Taymouth a mill with an output of about 1,000,000 feet a year. The greater part of this timber is taken off his own lands some of which are freehold and the remainder held under lease by the Crown. The timber is cut and hauled to the mill during the winter and the same is sawn at once and piled in yards for drying. The mill is operated only during the cold weather months. Mr. Young was first elected a member of the Legislative Assembly in 1908, in the Conservative cause, and was returned in 1912 and 1917. He was born at Taymouth, in 1854, and is a life long, progressive citizen of that place, who engages in farming extensively.

Hon. Robt. M. MacGregor is a son of the late Jas. D. MacGregor, a former Lieut.-Governor of Nova Scotia. First returned as a member for Richibucto, in 1904, he has been successful in every subsequent contest. Mr. MacGregor is a member of the Executive Council in Nova Scotia without portfolio, being appointed in 1911. A Liberal in politics and a Presbyterian in religion, the subject of this brief reference resides in New Glasgow and is 43 years old. He is a member of the firm of J. D. & P. A. MacGregor, Limited, lumber merchants, and has other extensive business interests, to which he devotes close attention and under his able guidance they are growing and successful.

Rufus S. Carter represents the historic county of Cumberland, so long associated with the political battles of the late Sir Chas. Tupper, who became known throughout Canada as the "Cumberland War Horse." Mr. Carter is both a lumberman and a farmer; and was elected to the Municipal Council previous to becoming a member of the Legislature, being first returned to the latter body in 1911, and again in 1916. Mr. Carter has had a rather interesting career, and took an active interest in the 93rd Regiment, retiring with the rank of captain. He also served as a Commissioner to the Maritime Winter Fair for three years, and was a member of the Canadian Bisley Rifle Team in 1897, and attended the late Queen Victoria's Diamond Jubilee. He is fond of curling and his family is one of a long and honorable descent.

Big Lumber Negotiations Are Under Way

A leading exponent of the timber trade of the Dominion, who is now in London, England, writing to the "Canada Lumberman," under date of December 6th, says: "We have had some stirring times in London since the armistice was signed. Some of the French vivacity has apparently permeated the life of the usually staid English people, and scenes of great rejoicing in the streets and restaurants have been of daily occurrence. There is really nothing much to tell you of the lumber situation. All importations and distributions are still under the British government controller and how long such control will continue no one seems to know. The war evidently stopped some few months sooner than was generally expected and then this country has been in the throes of a general election. These things all help to delay prompt decisions in big matters, but we are extremely hopeful of the outlook so far as Canadian timber is concerned. Negotiations for big trade are under way but definite decrees have not yet been reached, and may not be for some time."

National Method of Forest Matters

Ellwood Wilson, chief forester of the Laurentide Company, Grandmere, Que., thinks it is high time that the Dominion took some effective steps in a national method of forest utilization and production. He hopes that the people of Canada are not so shortsighted or so foolish as to leave this important matter until it is too late and will not wait to shut up and lock the stable door after the horse has been stolen.

In a recent letter in the press the following, which will be read with interest appears:

Some time ago a very interesting discussion took place in respect to the supplies of spruce in the eastern part of Canada. This discussion being started by some statements which were made by Mr. William Little, who, from his long experience in the lumber business, is well qualified to make the statements that he does. In this con-

nection a letter has been received at the office of the Canadian Pulp and Paper Association from Mr. Wilson, in which he says:

"As far as the acceptable timber supplies of Eastern Canada are concerned, I am only in a position to speak from the deductions which I am able to make.

"In regard to Quebec, however, I am better posted, and in regard to the valley of the St. Maurice River, which is a fair sample of Eastern Quebec timber, of the best class, I should say that at the present rate of consumption, there is enough pulpwood standing to last between 35 and 40 years. The consumption has, however, been increasing by leaps and bounds; in the past five years it has increased nearly 200 per cent. Of course, at any such rate of increase in the future, our supplies would be correspondingly decreased.

"The situation for the future is certainly serious enough to one with which I have been familiar since my first coming into the Canadian woods, and it was at my instigation that Dr. Howe and the Commission of Conservation commenced their work.

"The situation for the future is certainly serious enough to cause us to examine into the matter very carefully, and to commence to take steps which will look toward the perpetuation of our pulpwood supply.

Lumber Merchant Now Mayor of Brandon

A. R. McDiarmid, Brandon, Man.

A. R. McDiarmid, who was recently elected Mayor of Brandon, Man., on the business men's ticket, is a widely known lumberman, being a member of the firm of McDiarmid and Clark, Limited, retail lumber merchants. This firm also conduct a sash and door factory, doing a wholesale business and during the past few years have built up an extensive connection. Previous to his recent victory at the polls, Mr. McDiarmid had never entered municipal life, but the Board of Trade of the Wheat City decided that aggressive and efficient management of civic affairs was necessary and nominated Mr. McDiarmid for the Mayorly and several others as members of the Council. In a lively contest the Board of Trade representatives came out ahead, winning by satisfactory majorities. Mr. McDiarmid accompanied by his wife and little daughter, spent several weeks in Toronto recently with his brother-in-law, Mr. Hugh A. Rose, representative of Mason, Gordon & Co., and also with Mrs. McDiarmid's parents, Mr. and Mrs. M. W. Burr, of Guelph. While in the east, Mayor McDiarmid met a large number of the members of the lumber industry, who warmly congratulated him on his recent victory.

Co-operation with the Forest Service and the National Bureau of Census in securing a comprehensive census of the forest resources of the United States, is to be undertaken shortly by the National Lumber Manufacturers' Association, it was announced by Wilson Compton, Secretary-Manager. Recently Dr. Compton was authorized at a meeting of the Board of Directors of the Association, to submit the matter to the presidents and secretaries of the various regional associations affiliated with the National body. Dr. Compton said the proposition had been most favorable received, and that immediate plans would be made to get representatives of the association in touch with Census Bureau officials. Provision for expenses of such co-operation has been made.

Unless Lt.-Col. W. A. Bishop, the world's premier airman, misses his guess, folks will be travelling from Ottawa to Toronto, Montreal and other Canadian cities via aerial routes within a year—making the trips in a fraction of the time now required, and with the addition of no greater risk than they take when covering the distance by the more commonplace method provided by the railways. The famous Canadian aviator is enthusiastic respecting the commercial possibilities of the airplane, and eagerly looks forward to the day when the Dominion will have its regular service from city to city.

"Safe? It's as safe as a church. Under present conditions, no danger attaches to flying. However, I think a number of changes will have to be made in the adapting of airplanes for commercial use; I do not think conversion of war machines will prove successful."

Supply What is Wanted in the Way it is Wanted

This is How Foreign Business in Wood Products can be Developed—Conditions Abroad Must Be Studied and Every Effort Put Forth to Meet Them

A comprehensive and logical review of the present situation and business outlook, so far as lumber and timber are concerned, has been received from a well known authority in Tacoma, Wash., by Hugh A. Rose, of Toronto, representing Mason, Gordon and Co., Montreal. The writer states that, during the period of the participation of the United States in the war, and particularly during all of 1918, up to the time of the signing of the armistice, the whole fir industry was under embargo by the government, by which is meant that the entire product of the mills was under option of the U. S. federal authorities. This provided that all lumber cut at the mills should be assigned to government uses so far as it could be made to apply, which uses were principally for cantonment building, airplane stock, ship timbers and all other items entering into wooden ship construction. Every order, which any of the mills took during that time for a commercial customer, had to be passed upon by the government embargo office and released from that option. That made business difficult to do and the result was that the mills were not looking for commercial business.

The writer continues: When about the first of November the end of the war seemed to be in sight, I made the comment to some of my associates that I thought the busiest thing that the mill men would be doing for the next two weeks would be acknowledging cancellation of orders. It turned out just that way, and that mill has the least office work to do which had the fewest orders, and thereby the fewest letters to write. Apparently with a sweep of the hand the Government rubbed everything off the book. There is no complaint, whatever, about that; we are all so glad that the war is over that we accept the consequences with resignation and complete satisfaction. It is the same with the entire industry.

Much Equipment Left in the Bush

If you could be out here in the West and see some of the debris lying around after the chief of cancellations has gotten through, you would be surprised and thunderstruck. Millions and millions of dollars are dead in this district. They cover logging equipment of every kind and in almost inconceivable quantity; logging railroads in various stages of completion, built into the timber with no other thought than to get the best stock quickly and regardless of expense; and other millions in lumber of various kinds lying around at the mills, which was a by-product from the main endeavor to get the maximum quantity of the stock wanted by the government. It will take many months to adjust the mill, machinery and allied industries in this district.

We had a lot of business cancelled and only enough was left to us to keep our organization together and to continue business during the transition period.

However, the outlook is not hopeless, but far from it. We believe that as soon as the country gets itself together and heads toward an era of peace instead of war, we shall have commercial business in far larger volume than ever before. Buyers are now hesitating for several reasons. In the first place, there is usually very little building at this season of the year in the territories to which we ship, the exception being in the southern climates where building can be conducted at all seasons. But I feel that the principal reason for hesitancy is the uncertainty about prices. Dealers do not want to order stocks forward now until after the inventory time, and building projects will be held up until capital sees which way "the cat is going to jump." That is perfectly natural and we could hardly expect anything else. Owing to the tremendous stocks of common dimension lumber at the mills, which is part of the accumulation of side lumber to which I referred before as a by-product of the government frenzy to get their timber needs, common lumber has softened somewhat. Clear lumber is very strong and I do not look for a corresponding decline. Furthermore, the stocks of common dimensions are not so large, but that a few weeks of commercial buying on no larger scale than we have seen in many recent years would quickly absorb it. The whole situation then is strictly psychological as I view it.

Value of Lumber Cannot Recede

What is most compelling in my optimism for the future, however, is that in a large way prices of lumber and lumber products cannot go lower until costs are reduced. The market on prime logs is \$20.00 per thousand, which is double the cost of a few years ago,

and the same can be said of labor. Other items of cost, which are important in themselves, machinery, logging equipment, supplies, and everything else are in the same relation or worse. There is a feeling among the large employers that labor should not be reduced in wage until the cost of living goes down, and so you move around in a circle. If buying does not begin, then the only readjustment can come after a complete shut down and a demoralization in prices of logs, materials, living and labor. I do not look for that, but rather am inclined to think that there is going to be a tremendous foreign demand for reconstruction in the devastated sections of Europe.

In the period of transition, therefore, there may be some slight softening in prices, but the spring will see present prices affirmed or made higher. Recently in Chicago, there was a meeting of the National Lumber Manufacturers Association and I am taking the liberty of sending you a letter containing a comprehensive report of the proceedings as it contains some valuable information. Here are some of the extracts: General Marshall of the Construction Division of the Quartermaster General's Department, stated their governmental statistics recorded that there was no mill or yard stocks of lumber in the United States; that labor disorganization was so great in the milling sections it will require some time before normal operations or pre war operations can be hoped for and this will have the effect of keeping down retail yard stocks; that two million doors were used by Uncle Sam since April 5, 1917, requiring 6,528 freight cars to transport the doors and other mill work used; that over one billion feet of lumber had been used by Uncle Sam in cantonment and like work since April 5, 1917.

The Foreign Trade Will be Enormous

The President of one of the largest and strongest financial institutions in Chicago said in part: Do not get discouraged over what seems to be a depression; it is merely a lull in the natural course of events in changing from a war basis to a peace basis. Prices will not go down—do not cut prices. Foreign trade for this country will be enormous, but we must know foreign trade conditions and do business their way just as had England, Germany, France and other great exporting countries. We must make a careful and thorough survey of foreign requirements, credits, etc., and supply what is wanted in the way that it is wanted. When asked if he would extend credits to foreign countries on commercial projects, the speaker said: "No, because I do not know their ways of doing business. He further remarked: Raw materials are the same as legal tender when we consider the supply and demand of to-day; that more than one-third of the world's gold supply is now in the United States; that in all probability the readjustment period will extend over three or four months, and then we shall begin to realize our aims; that labor wages will go down very slowly and not at all until those commodities contributing to the cost of high living have been reduced in price, and that was not now in sight; that banking institutions would lend all the money necessary to carry on the commerce of the country in the new era upon which we are about to enter and there will be no money shortage. There is not enough material of any kind to supply the entire world even if it could be distributed to the world.

Impetus in Building Will be Far Flung

The following interesting statistics were also given by a member of the War Industries Board. From September 5, 1918, to November 11, 1918, the Board issued permits for buildings in Chicago, aggregating \$13,000, and for the whole of the United States, but \$6,000,000. An order had been issued withdrawing without reservation all building restrictions in America. Chicago had now in contemplation over one hundred million dollars worth of buildings of various kinds, largely, however, factory and industrial projects. Undelivered orders for ship timbers for the Emergency Fleet Corporation aggregated somewhat in excess of one hundred and seventy million feet, board measure, and shipbuilding would likely go on for some time; that the government would not dump their logs or unused lumber on the open market and demoralize price conditions, but would hold the stock indefinitely if necessary to avert a price break.

It was also stated that railroads were four years behind with improvements and extensions and must go ahead with their work; that out of the sum set aside by the U. S. Government for railroads 596 millions of dollars has not been spent, but this sum will be spent from now on and beginning at once. This is highly significant to us

as while we might not be getting out car and railroad materials, the more work of this character and the greater the demand upon the yellow pine districts, the greater the demand upon the Coast mills not engaged on like work for yard stock.

Nothing to be Gained by Price Cutting

The farmers all over the country have plenty of money, in fact more than ever before and prosperity is assured in a commercial sense. It is said that Russia formerly exported to England about fifty per cent. of the lumber needs of England and that Canada and the United States will get now practically all of Russia's former percentage of export of lumber to Great Britain; that it would be twenty years before France can replenish her forests and that foreign governments would likely transact all their business in foreign lumber buying, instead of it being done by, with, and through individual concerns, and that there will be a scarcity of ships for some time to come. It was predicted by big operators that lumber prices would go up, and that none of the manufacturers present should run home and just because they did not get all the orders that they wanted in a few weeks, start cutting prices and demoralizing the market. It is a known fact that the lumber industry is not now getting as much for their products as they are entitled to and absolutely need. It will require several months before we get our bearings and during that time we must reshape our affairs and undergo the change from war operations to peace operations. All retail lumbermen are confident that a big building season is ahead and the outlook in regard as excellent. Most men in the industry are optimistic and believe there are good times in store and at a date not far distant.

Wood Testing Laboratory Begins Operations

The new Wood Testing Laboratory of British Columbia is now in operation and much interest has been aroused in its work. For many years lumbermen and woodworkers of the Pacific Coast Province had dreamed of such a convenience, but, at last it has become a reality. The Laboratory is housed in a specially constructed building at the University of British Columbia, in which there is also the recently formed forestry class for returned soldiers. L. L. Brown is

Woodworking shop in connection with the B. C. Wood-Testing Laboratory

in charge of the work. He is a former member of the wood testing staff at McGill University, Montreal, and after the war broke out went overseas as a lieutenant in the tunnelling corps. He received his discharge after two years' service in July last. His assistants are W. J. Johnson, of Toronto University, J. A. Carson, of McGill University, Montreal, W. Templeton, late of R.N.A.S., and others. As it was felt desirable to test aeroplane spruce on the spot, the Laboratory was primarily established as a war measure. As the Laboratory in McGill has almost been depleted of help, owing to the war, an arrangement was made to ship its entire equipment to the Coast; otherwise it would have taken many months to secure new machines, and it was felt that the activity of the Eastern Laboratory could better be held up temporarily. Mr. Brown has been testing Sitka spruce for aeroplane purposes, but now that the war is over, it is possible that this will not be continued. If it is decided, however, to discontinue the test of this wood, the Laboratory will make a comprehensive study of Douglas fir in structural dimensions.

The nature of the wood tests made at the Laboratory are very

interesting and cover bending, impact bending, compression parallel to grain, compression perpendicular to grain, hardness, shearing parallel to grain, cleavage, tension perpendicular to grain, etc.

In the accompanying illustration, showing the interior of the woodworking shop, in connection with the B. C. Wood Testing Laboratory, the Olsen Universal Testing Machine is seen. About a year ago some small, clear specimens of Douglas fir were tested in the Laboratory of Montreal, and the results were issued in bulletin form. The Vancouver Laboratory proposes, as stated, to continue the work by testing Douglas fir in structural dimensions as the fir is the most important tree growing in the forests of B. C.

Wood Preserving Conference at St. Louis

The 15th annual meeting of the American Wood Preservers' Association will be held at the Hotel Statler, in St. Louis, Mo., on Tuesday and Wednesday, January 28th and 29th. A most interesting programme has been prepared. A. R. Joyce is acting president of the association and F. J. Angier is secretary treasurer. It is expected that there will be a large attendance as the 1919 convention will be given over to the consideration of new projects which have been brought about in the wood preserving industry owing to the war. The strife in Europe disorganized ocean shipping to such an extent that the supply of creosote was curtailed and this forced the substitution of other preservatives. Uniform specifications and centralized purchasing of cross ties made necessary radical readjustments in this industry. These are the problems which have to be faced and the association hopes that everyone whether connected with a railway or a commercial treating plant, or in any way engaged in the production of preservatives, ties or lumber, will make it a point to be present and contribute their ideas as well as receive the benefit of others. Not only will several valuable and instructive committee reports be presented, but timely and helpful papers will be read on the creosote oil situation, the zinc chloride situation, the development of uniform practices in procuring and preserving cross-ties, etc.

Annual Reunion of Wholesale Lumber Staff

The annual dinner of the staff of Terry and Gordon, wholesale lumber dealers, Toronto, was held at the Queen's Hotel on Friday, January 3rd, and is an event always looked forward to with interest. After a full measure of justice had been done to the many good things provided, a few pleasant hours were spent. H. J. Terry presided and those present were A. E. Gordon, A. E. Cates, Clark Allen, L. M. Dougherty, R. A. Watt and L. J. Linton, of Toronto; Frank W. Gordon, of Vancouver, Western representative, and W. C. Thuerck, of Haileybury, northern representative. A general discussion took place with regard to results of the past year's and the prospects for 1919. It was reported that the firm had during 1918 closed the most successful and satisfactory volume of business in their history and looked forward with confidence to still greater returns during the coming twelve months. All those present made timely and interesting speeches in which a number of valuable suggestions were presented for further perfecting the system and service of this enterprising firm.

Budget of Briefs From Ottawa

During the second week of January the Ottawa lumber trade learned of an embargo being placed on the New York Central lines to the Atlantic piers, at Boston, New York, Hoboken, and Jersey City. It was believed that the great amount of American War material gathered at these ports had become so great as to cause congestion. As very few shipments were going forward over the N.Y.C. from Ottawa little difficulty was caused.

Keith Davidson, of James Davidson's Sons went through his third aerial accident at Shawberry Camp, England, recently and after falling one thousand feet escaped with the loss of a few teeth and a scratched face. The accident happened on December 13th, when the "joy-stick" of his machine went out of business, when he was looping the loop. While training at Camp Borden he had a spill and shortly after arriving in England he had another before his latest mishap.

John R. Booth and W. C. Edwards report their bush operation as "going fine" for the opening period of the new year. The W. C. Edwards Company expect to be able to operate their factory throughout the winter, running on commercial boxes and other grades. James Davidson's Sons will operate their plant in manufacturing doors and sash, in anticipation of future orders.

The estate of James Davidson up to the beginning of the year had cut 100,000 logs and will attempt before the season ends to cut another twenty-five thousand. These logs have yet to be hauled to the water. The cut this year will amount to about 6,000,000 feet, in comparison with 9,000,000 feet in 1918.

Canada Lands Big Order for Wood Products

Consignments to Meet Old Country Requirements will be Billion Feet and will be Filled from Various Sections of the Dominion

Widespread interest has been aroused in Canadian lumber circles with respect to the cabled despatch from London, England, that the Timber Controller of Great Britain would purchase in Canada half a billion standards of lumber, which is practically equivalent to one billion feet, board measure. It is also declared that lumber would be of all grades, and bought under the direction of the Timber Controller through British brokerage firms and Canadian timber agencies in London, who will deal direct with the Canadian lumber producers.

The despatch further states that negotiations had been carried on between the Canadian Mission in London, England, of which Mr. Lloyd Harris is the head, and the Timber Controller for Great Britain, and the foregoing is the outcome.

It is also understood that every Canadian producer who is registered on the lists of the Trade Board at Ottawa will be given an equal opportunity to sell. There is also to be an allocation of purchases upon a territorial basis, thus assuring a fair proportion of purchases to Western Canada. All the British Columbia lumbermen are represented in London by L. B. Beale, Timber Commissioner for the Province, who is attached to the staff of F. C. Wade, K.C., Agent-General for the Province in Great Britain, and he will deal directly with the Timber Controller. This lumber is to be bought within the next twelve months. It will represent a total transaction in money value of about \$40,000,000.

The Report Bears Official Endorsation

The cablegram was sent by the Canadian Press to all the leading newspapers in the Dominion. The "Canada Lumberman" has been asked several times if the report is authentic. So far as it is possible to ascertain the essential facts are correct in every detail and bear all the outward marks of official sanction. In the first place, the news was cabled by John W. Defoe, one of the outstanding figures of Canadian journalism, and editor-in-chief of the Winnipeg Free Press. He is known as a broad-minded, enterprising, and well informed newspaper man, and is at present in England on behalf of the Department of Public Information, Ottawa. In this capacity he will be attached to the Canadian delegation which is to represent the Canadian interests at the Peace conference. It was also asserted at the time of his departure from Canada that Mr. Defoe would keep Canadian people advised by special cables sent as each event warranted, which would reach the Dominion through the agency of the Canadian Press, Ltd. It is further known that it is at the personal request of the Premier, Sir Robert Borden, who has been for some weeks in England, that Mr. Defoe is acting in his present official capacity. In view of these facts there can be no doubt that the news is reliable, but, of course, the details of the big purchase have yet to be worked out.

In regard to the arrangements of credits a press despatch from Ottawa says:—The necessary Canadian credit which rendered the large lumber transaction announced by cable from London possible was arranged some weeks ago between the Dominion Government at Ottawa and the Imperial Government. This credit is to be availed of to the extent that is rendered necessary by the state of international exchange. The British Government is to supply the shipping to carry this lumber to Great Britain. The transaction indicates the character of the business which it is expected the Trade Mission will be able to obtain from now on, particularly upon the Continent.

How Ottawa Views Big British Purchase

Press despatches announcing that the British Timber Controller was to place orders for one billion feet of Canadian lumber and timber, was taken by representative interests at Ottawa as the expected outcome of the persistent activities of and representations made by the Canadian Mission and the Canadian Lumbermen's Association, says our Ottawa correspondent.

For some time past, as the members of the Canadian Lumbermen's Association privately knew, efforts have been put forth, both toward the Canadian and Imperial Governments, to bring about a readjustment of normal conditions through the usual (pre-war) channels. The result desired has been accomplished.

Practically nothing at the time of writing was known in Canada as to how the order would be shared. It was believed, however, that the established trade channels would first be given consideration. Anything that was not taken up by such sources would be open to other branches. Tenders, it is believed, would be submitted for the overflow, and prices for various grades asked for.

Another significant point is that the European powers that be are to arrange for the bottoms and shipping facilities. Consequently Canadian lumber and timber is to be sold f.o.b. ocean shipping point in Canada. At the present time it is not advisable to go into this phase too deeply. Britain will arrange the shipping, also regulate it and the cargoes the ships carry.

The actual influence of the letting of the order, which in value amounts to some \$40,000,000, is not likely to be felt in Canada for some months at least. If the whole order is consumed by Canadian dealers it will make a big hole in the sawmill cut of 1919. The tremendous amount of stock in the sizes desired indicate this. What was thought at Ottawa would be done in the letting of the order is that the bulk of it would go through the regular pre-war avenues and through the established houses. Any margin that was left would be offered to competitive bidding. Thus specifications would be sent out and tenders asked for on certain grades of stock.

The Order as Seen in Montreal

Our Montreal correspondent says: "There are a few lumbermen here who are skeptical of the billion feet purchase for England. One asserted that the stocks held by the exporters are not nearly as heavy as generally supposed; that there is not a billion feet of lumber in the country available for export, and that the Government has already very heavy stocks in this country which are now only being moved. His idea was that the whole thing is an exaggeration and certainly that the lumber could not be shipped in the course of a year."

Lumbermen Should Elect Their Nominees

The Lumbermen's Section of the Toronto Board of Trade which was organized three years ago, has made splendid progress. New officers have been elected and an extended reference to the proceedings will be found in another column of this issue. The Section has nominated three of their liveliest members for higher honors in Toronto Board of Trade affairs. These are C. W. Wilkinson, for a place on the Council; John B. Reid, as a member of the Board of the Canadian National Exhibition; and W. J. Lovering, for the Arbitration Board.

It is not enough to merely nominate these gentlemen, but every member of the Section should take an active part in seeing that they are elected by united effort and energetic work. There is no doubt that the Lumbermen's Section of the Toronto Board of Trade can wield sufficient weight and influence to see that their representatives are successful in the elections which will be held at an early date. Mr. Reid has proved a live wire in Canadian National Exhibition affairs as all who attended the Retail Lumber Dealers Convention in Toronto, in September last can testify. Mr. Wilkinson is a hard-headed, keen business man who enjoys the confidence of his associates and would make an admirable representative on the Council of the Board of Trade, while Mr. W. J. Lovering, who has been identified with the lumber business for many years, is closely in touch with all its affairs and would prove a fair, open minded man on the Board of Arbitration.

250,000 New Houses in England

Of the 300,000 new houses which, it is estimated, will be required after the war, according to the London, Eng., "Times," nearly 250,000 have been promised by local authorities, with the financial aid of the government. Sites are being selected, and designs are under consideration. The government have circulated model plans, and the Royal Institute of British Architects are publishing the approved designs resulting from local competitions throughout the country. In the selection due attention must be given to the character of local architecture. A design which might be suitable for a manufacturing town in Lancashire would be quite out of keeping in rural surroundings. The work is to be done by local architects, and there will be a very wide choice of designs.

The steamer "Antonias" was recently launched at the yards of the Pacific Construction Company, Port Coquitlam, B.C. The vessel is 2,345 gross tonnage, and her speed load is 10 miles an hour. She is classed by the British Lloyds as the very highest and it is understood will enter the Atlantic trade.

N.S. Lumbermen had Profitable Year

Operations Were Carried on in Much Different Manner Than Ever Before, Says B. H. Dunfield

In reviewing the lumber industry for the past year in Nova Scotia, B. H. Dunfield, of Dunfield & Co., Halifax, says the results were profitable to the manufacturers, although manufacturing was carried on in a very different way than ever before. He says that exporters were forced to look for other new outlets owing to there being no buying during the year for the English market. In this respect they are fairly successful. The advent of the United States into the Great War opened up heavy buying from that country, and large quantities of boards, plank, and even three-inch spruce were railed into the New England States.

In addition to the demand from the American market, the past season has been an unprecedented demand for our local markets. Instead of sawing practically all three-inch deal and scantling, as during many years past, the mills were sawing dimension stock, and large quantities of boards and two-inch plank. The woodworking factories along the lines of railway have been busy all during the season re-sawing, planing and matching, etc., in order to supply the local demands for sheathing, flooring, etc.

The production in this province during 1918 was well up to the previous year, and the close of the year shows only a moderate stock on hand. Labor has been a matter of vital importance during the war, many mills being operated by old men and boys, who received much higher wages than previously paid for this class of work. Conditions indicate a prosperous year ahead for the lumber operators, with prices ruling perhaps a shade higher during the present year.

From present indications the output for 1919 will be about the same as during the present year, although of course much depends upon weather conditions. Some manufacturers have already made considerable progress with their operations, and expect after the holiday season is over to continue with full crews. Some camps have been temporarily closed on account of influenza, but it apparently has not retarded operations to as great an extent as in other Provinces.

Buying for the English Market

Prices for 1918 have been slightly in advance of those realized in 1917, and after adding the increased cost of production, will leave satisfactory net results for the year's output. It is expected buying will soon be resumed for the English market, in fact some sales have recently been made. Heavier buying might be taking place were it not for the scarcity of tonnage. It is understood that the British and French Governments still have large quantities of lumber on hand in Canada which they purchased during 1916 and 1917, and this they are now endeavoring to move before the new stocks are ready, and at the present rate of shipping it is expected it will take at least six months to move these old stocks. It is therefore not expected that heavy shipments of 1919 stocks will be moving until well along into next summer. The buying is still absolutely controlled by the British Government through their agents at Ottawa.

The American market at present is dull and inactive on account of a large number of Government contracts having been cancelled and no house building going on. The local markets in Nova Scotia are well supplied, and there is only an occasional demand for cars of special sizes. In general, conditions indicate a prosperous year ahead for the lumber operators, with prices ruling perhaps a shade higher during the present year.

Death Claims James William Hackett

James William Hackett, who was a pioneer contractor and sawmill owner in the West, died at his home in Vancouver on Christmas day. He was seventy-one years of age and was born in Truro, N.S., where he spent the early years of his life. Going to the West he first located in Winnipeg, but in 1888 moved to the Coast. The deceased was a member of the firm of Robertson & Hackett, general contractors, the Bank of B. N. A., the Bank of Montreal, and other substantial structures being of their construction. They have a sawmill on False Creek. Mr. Hackett always took an active interest in public matters in the city, and at the time of his death, in addition to being vice president of the Robertson & Hackett Sawmills, Limited, he was president of the B. C. Lumber and Shingle Manufacturers, Limited, an organization with which he had been closely associated since its inception. He was a director of the Vancouver Exhibition Association and vice-president of the Metropolitan Building Company. Mr. Hackett was a past president of the Terminal City Club, a member of the city council in 1897, and of the licence board in 1912. He has been a member of the board of trade for the past 20 years.

He is survived by his wife, one son, Mr. George R. Hackett,

manager of the sawmill business; one daughter, Miss Elsie Hackett, a trained nurse, who waited on her father during his long illness, and an elder brother, Mr. Hugh Hackett, residing on King-way.

Motor Trucks are More Heavily Taxed

Retail lumbermen, who make use of motor trucks for delivery of consignments of lumber and building material, will have to pay more for their licenses in the future. The Department of Highways in Ontario, owing to the increase in the number of trucks and the heavy strain they are putting on the roads, is inaugurating a new scale of fees for the present year. In the past one and two-ton trucks have had to pay \$10. For each additional ton of maximum "capacity" there has been a fee of \$5. In the future \$10 will be the minimum charge for a truck of two tons "combined weight and carrying capacity," which corresponds approximately to a single ton truck under the old method of fixing weight. Up to eight tons the extra fee is \$5 per ton as formerly, but the actual amount paid will be increased by the new basis. On trucks of over eight tons up to ten the rate will be \$7.50 per ton, and on all trucks of over ten tons the rate will be \$10 per ton.

Another change made in license fees makes the rate for a dealer's license and markers \$20, the dealer having the right to use the markers on any car in his establishment apart from cars used for hire. This does away with the system that allowed a dealer to pay \$10 for the license and original markers and \$5 for each extra set of markers. This system is discontinued because of misuse of the extra markers.

Western Men will Meet in Calgary

The 28th annual convention of the Western Retail Lumber Association will be held at the Palliser Hotel, Calgary, Alta., on January 22nd, 23rd and 24th. An interesting programme has been prepared and numerous problems concerning the distribution and sale of lumber in Western Canada will be considered. W. A. Mellrath, of Radville, Sask., is the president. Among the outstanding features of the convention will be an address by Edward F. Treia, of New York City, and a practical talk on "Using up Odds and Ends," by H. B. Armitage, of the Manning-Sutherland Lumber Company, Camrose, Alta. A. L. Porter, secretary of the Western Retail Lumbermen's Association, Spokane, Wash., will give a talk on "Association Activities." There will be group conventions on January 23rd, and the following groups will convene: Credits, chairman, W. H. Heywood, Rouleau, Sask.; Purchasing, chairman, F. C. Manning, Calgary, Alta.; Sales, chairman, C. W. Temple, Moose Jaw, Sask.; Superintendents, chairman, E. B. Aylsworth, Melville, Sask.; Accounting, chairman, J. B. Sinclair, Winnipeg, Man.

One of the difficulties of past conventions has been that experienced in getting individual members up on their feet to express their sentiments regarding any subject, before a large group of men. The idea of the Group Convention is that they will be held in smaller rooms, and will be straight heart-to-heart talks between the different members. It is hoped that, with this idea, many new active members of the Association with brand new ideas will be developed. Resolutions will be made in the Group Convention to be submitted to the Convention as a whole. This is a new departure in Convention plans, and very successful results are anticipated.

New Point Raised in Lumber Shipments

"If it is not one thing that is giving you trouble in traffic matters it is another," declared a leading Ontario wholesaler this week. It seems that disputes with railways are cropping up all the time and the ground taken now and then by some of the transportation companies' representatives is so amusing and refreshing that one must really smile in the midst of perplexity and irritation. "Some months ago," he continued, "we shipped a carload of white pine, cutting up lumber to Pennsylvania. It reached the consignee all right, but there was a leak in the roof of the car. The rain got in upon the lumber and we had to make an allowance of \$100. Naturally we thought the railway should make good this amount, but after conducting negotiations for some time to recover the same, here is an extract from a letter which I received to-day from the freight department of the road which says: 'We believe that the box car in which the lumber was shipped was of your own selection and you were apparently satisfied with it at the time. We cannot therefore see why we should be held responsible and we must decline to entertain this claim.'

"Can you beat it?" asked the speaker. "That excuse is certainly original and I may tell you that our company had about as much to do with the selection of that car at the point of shipment as we will have to do with the peace terms of Europe, or the formation of the new league of nations.

Effective Work of the Credit Bureau

Membership Fee Will Be One Hundred Dollars After April 1st
—W. C. Irvin Succeeds A. E. Eckardt As Chairman

The annual meeting of the Lumbermen's Credit Bureau was held on January 10th, in the Council Chamber of the Board of Trade. There was a large attendance of members, and the meeting turned out to be one of the most important and interesting that the Bureau has yet held. Mr. A. E. Eckardt occupied the chair. The treasurer's report, presented by Mr. J. B. Reid, showed a balance on the right side of the ledger. The secretary's report was brief, outlining the work of the year, and referring also to the operation of the collection department.

The chairman, in his address, said that they had had quiet times during 1918, yet the need for an association such as the Lumbermen's Credit Bureau had been quite apparent to everyone. When business commenced to pick up again, as undoubtedly it would in the near future, the organization would be even more useful than it had been in the past.

During the past year, an important step of progress had been made in the selection of a solicitor to act for the members of the Association in matters relating to liens. While there had not been many mechanics liens put on during 1918, probably during the next few years the services of this solicitor would be in greater demand.

Changes in Mechanics' Lien Act.

Recently, the chairman said, he had an interview with Mr. Jennings, of the firm of Jennings & Clute, who acted for the members in connection with liens, and had discussed the necessity for changes in the Mechanics' Lien Act. Mr. Jennings had suggested that a strong deputation should be sent to interview the Ontario Government and ask for such changes as were desired. Last session, a few satisfactory amendments had been put through, and others had been left over because of the session being so near an end when the matter came before it. He understood that the Ontario Retail Lumber Dealers Association would probably take this matter up at its annual meeting, on February 11th. He hoped that if this were done the Lumbermen's Credit Bureau would be notified, so that it could join in the deputation.

The chairman then called upon various members present to express their views in regard to the services they had obtained from the Bureau during the past year. Each member expressed appreciation of the work of the Bureau, and everyone was well satisfied with the reliability and importance of the information they had obtained from it. Several useful suggestions were made in regard to the working of the Bureau.

Several suggestions were also made in connection with the advisability of enlarging the membership. The chairman said that he would like to see a committee appointed to prepare a list of names of prospects for membership, and that the names on the list should be divided among the members in order that they might be canvassed effectively.

The Work of the Bureau Reviewed.

Mr. J. B. Reid said that the Bureau had now established itself as a success and he believed that outside firms needed the Bureau more than the Bureau needed them. If they were to put an increased price upon membership, and let the public know that they were doing so, he believed that those who had not yet joined would appreciate the importance of doing so more definitely. He moved that members' seats in the Lumbermen's Credit Bureau should be placed at the value of One Hundred Dollars each, and that each member already in good standing should be given a receipt for his seat upon the Bureau. This motion was discussed and finally amended to provide that new members could come into the Bureau until April 1st, without paying the fee of One Hundred Dollars for their seat, but that after that date the new charge should prevail, and also to provide that the secretary should get out framed certificates of membership, to be furnished to each member in good standing. In this form the motion was seconded by Mr. T. E. Rathbone, and carried unanimously.

The Election of New Officers.

The election of officers for the ensuing year resulted as follows: Chairman, Mr. W. C. Irvin; Treasurer, Mr. J. B. Reid; Secretary, Mr. Horace Boulton; Directors: Messrs. T. E. Rathbone, T. A. Paterson, O. M. Moore, F. Ryan, and F. Rogers.

The new chairman occupied the chair during the balance of the meeting. A committee was then named to carry out the suggestion previously made by the retiring chairman in regard to calling upon prospects for membership, the committee being as follows: Messrs. R. A. Rastall, W. Sutherland, S. McCord, F. Ryan, M. H. Eaton, Wm. Britnell and O. M. Moore, with Mr. Moore as convenor.

For what does it profit a man if he gain five minutes by taking a chance if he loses a week's time by an accident? or what gain has he if a moment's carelessness makes him a cripple for life?

Railway Demands Are Deferred Until March

At a conference held in the offices of the Canadian Manufacturers' Association, Toronto, between representatives of the manufacturers and the Secretary of the Railway War Board and the officers of the Accounting Departments of the various railroads, the question of freight and express charges and credit arrangements was fully discussed. It was finally agreed that the date at which the regulation should go into effect should be postponed until March 1. In the meantime, Mr. J. E. Walsh, of the Canadian Manufacturers' Association, will appoint a special committee of manufacturers to study the question and make a counter-proposal. This will be presented before the Railway War Board prior to March 1 for a final settlement of the issue.

Real Exploitations By Canadian Foresters

The accompanying illustration is both pointed and humorous and forms the central picture on a holiday greeting card sent to many Canadians by the Headquarters Staff of the Canadian Forestry Corps, B.E.F., France. On the outside of the Yuletide memento there is a maple leaf and beneath it are the words, "All good wishes for Christ-

mas and the New Year." In mailing a copy to the "Canada Lumberman," Captain L. M. Ellis says the picture presents an idea of army forest exploitations as they are carried on in France, in the Vosges mountain section. It also affords some conception of the speed and efficiency with which timber cutting operations were conducted by the Canadians.

Islington Lumber Merchant Is Expanding

Major J. E. L. Streight, Islington, Ont., has purchased new premises opposite his present site and has commenced putting in switches and unloading stocks there. It is his intention in the near future to erect a two-storey, up-to-date brick factory, 80 x 120 ft. The office building, wagon and lumber shed, stables and garage, will be built first, and the work will start as early in the spring as possible, after which construction will be proceeded with on the planing mill. Major Streight has been in the retail lumber and fuel business at Islington for many years, and has built up a wide connection.

How Water Shipping Rates Advance

In Nine Years They Have Jumped From \$6.75 Per Thousand Superficial Feet to \$65.00 on Spruce

It costs real money now and a heap of it too to ship spruce and white pine from Nova Scotia ports to South America. The charges are ten times to-day what they were in 1910. The rates are retaining their aeroplane altitude. The tariff to South American ports had risen to sixty-five dollars per thousand superficial feet about the time the armistice was signed. There was a drop of fifteen dollars, but in a few days it was back to the old figures, and it is rumored that the schedule is still mounting.

Nine years ago the ship, Kings County, of over two thousand tons, was chartered to load lumber at Hantsport for Buenos Ayres or Rio de la Plata. The conditions of the charter party were that the ship was to load at Hantsport and carry between the ports named, one and one-half million feet of spruce or white pine at six dollars and seventy-five cents (\$6.75) per thousand superficial feet.

This was probably about the minimum, but for years the rate never went above \$9.00 per thousand. Now \$65.00 or more is paid to the same ports, and when it is remembered that the price of lumber at the port of shipment is now several times as large as it was then, one is inclined to wonder what lumber in South America costs the ultimate consumer. One thing is sure, however, and that is the price in South Africa will be equally high, for the freight rate from Nova Scotia to Capetown is not less than seventy-two dollars per thousand.

Why Not a Perpetual Inventory?

How many times have you an inquiry over the telephone something as follows: "Can you furnish us at once 350 pieces 2x6x12 rough hemlock?" How many retail dealers could answer that inquiry promptly by saying "yes" or "no, we have only 325 pieces 2x6x12 hemlock, but can furnish the balance or the whole number in yellow pine," says Harry E. Romley, of Medina, N. Y. We could not answer it without going into our shed and counting our stock of the item desired while our customer waited for us. A few minutes later we might have a call for another item which would mean another trip to count stock.

It occurred to us that a system of some kind might be devised whereby we could tell at any time from our records, exactly what and how much stock we had on hand. We considered the matter from various angles and examined the perpetual inventories used in several other lines of business but found nothing which we thought would be suitable for the retail lumber business. We wanted some system which would be handy for reference, which could easily be kept up to date, and which would not take up very much space. After considerable study, we devised a card system which we started to use January 1, 1918.

The system is handled as follows: You will note that under each size are two columns. On January 1st at the conclusion of our inventory, we transferred the various amounts to the proper places on the cards using the left hand column for stock on hand and which we might receive. In the right hand column is then entered from day to day the number of pieces sold during the day, which amount is deducted from the amount in the left hand column bringing down the balance which shows the stock remaining on hand at the beginning of the next day. The quantities sold each day are taken from our sales slips and for a gross annual business of say \$150,000 should not take more than thirty or forty minutes each day to enter upon the cards. When a card is full on one side we reverse it and use the other side and when both sides have been used we transfer the balances to a new card, giving it the same number as the old card so that our index is not affected by the change. At each inventory period we correct the cards if necessary to correspond with the inventory as taken by actual count.

The question as to how to index the system is a matter of individual choice. In general, we have indexed according to the various kinds of wood which we handle such as hemlock, yellow pine, fir, etc., making subdivisions under each as we may need them. Others might prefer to classify according to the use of the lumber rather than as to the kind of wood, for example, grouping all floorings under one index card, all novelty siding under another, and so on. In fact your index may be arranged to suit your own convenience after you once get the stock on the cards.

We have already spoken of the convenience of being able to inform our customers promptly as to the stock we have on hand. There is also another great convenience, for we find that by simply glancing over our cards once in a while, we are able to keep our stock better balanced than under the old system when we might be nearly out of a certain item or items and not realize it. We can now sit in the office and make up our order for broken sizes with an accurate knowledge of what we already have in stock and by referring to our filed

cards, it also gives us a line on the quantities of the various sizes which have been required during the year.

The foregoing advantages are largely those of convenience. There is one more advantage which in our opinion is worth far more than the cost of system, and that is the possession of accurate facts in case of loss by fire. How many fires can you recall where there have been disputes as to the amount of loss because the amount of stock destroyed could not be determined easily. Many firms have had serious difficulty in making their adjustments for this reason. If you use a perpetual inventory system, there simply can be no question in case of loss. We do not have to guess; we know the actual number of pieces, sizes, and lengths of each kind of stock. The insurance companies are glad to take this kind of evidence when it comes to making a settlement. We started it as an experiment, but it has more than proved its worth and is now a permanent part of our records.

The Hills and Dales of Lumberman's Life

By A. Soliloquy

It is a somewhat far cry from wheeling sawdust at the age of eleven years to owning and operating several sawmills, but in the interval much has been crowded into my career that perhaps, without egotism or effrontery, I may review, in the hope that it will prove, at least, interesting to some.

There is perhaps no phase of achievement more absorbing than the struggle and steps by which one masters difficulties and clears barriers, both seen and unseen, in the pathway of progress. In the realm of literature there is nothing that arouses keener appreciation or stirs ambition more than the biographies of leaders of the race who have had their trials and triumphs and, in the end, have, to use a terse expression, "made good," while succeeding generations have placed a stamp of approval upon many deeds and acclaimed their motives, who, in the years gone by and at the time and place in which the outstanding representatives lived, moved and had their being were censured and condemned. This is all by way of a preliminary paragraph, merely to justify offering a few observations in my own humble way, which the "Canada Lumberman" had repeatedly requested me to do.

It has been remarked that persistency in any good cause always wins, and I believe one of the main elements of success in any undertaking is the quality of stick-to-it-iveness; and another one which might be called "nerve." When I make use of this term I do not do so in any uncomplimentary sense. By it I mean courage, tact, aggressiveness and optimism. You will pardon me for using the first personal pronoun so many times, but I know of no other way in committing one's thoughts to paper than by employing the vertical symbol, sometimes known as the 9th letter in the alphabet.

One of the most important matters in the lumber world to-day is that of keeping up production and keeping down costs. The spread between selling price and cost price is not sufficiently wide to allow of any laxity or inefficiency in operation or production. I have always been extremely solicitous in the matter of finding out costs. There are too many men in every line of business who have no idea of what their overhead charges are, their percentages of profit, actual outlay for raw material and the conversion of that raw material into the finished product. If I had the time and could be persuaded to touch upon any one point, it would be that of economics showing extravagance in overhead charges—for instance, finding out the amount and cost of pork that a man consumes per day.

I have witnessed many changes in the lumber business. From the old up and down saw cutting a thousand feet a day to the operations in British Columbia, cutting 250,000 feet a day and from sawdust being removed in wheel barrows to the immense conveyer chains and refuse burners of the present. Yes, the evolution in the sawmill and lumbering lines have been wonderful, keeping pace with the spirit and development of the times.

There are some queer kinks in human nature, especially when one has met with a moderate degree of success. Perhaps he is inclined to have his head turned by the prosperity which seems coming his way, or his hat may be a couple of sizes too small. Herein lies a source of danger and weakness that has upset many promising careers. I believe, for instance, that a chap may sometimes get too much publicity, if he is a bit prosperous, and then again take a chap without any technical education and having passed the teachable age and finding himself out on the commercial avenue, I fear that it is very hard for him to use language with which he can best express himself to the public, so that he can, be easily understood. The lumber shack terms, with which I am more familiar by reason of early associations than pure, classic English, may not be quite so well rounded or polished as the more artistic and euphonious modern phrases, but, in the words of an old song, "They Get There Just The Same."

Canadian "Timber Butchers" Met Every Demand

In the Days of Rush During the War They Followed Production Rather Than Economy—World Later Amazed By Their Speed and Efficiency

One day the King, inspecting a Canadian forestry camp in England, laughingly remarked to the officer who was escorting him: "I believe you Canadians would cut down my forest at Windsor if you had the chance."

"We certainly would, Your Majesty," replied Brig.-Gen. Alec McDougall, who happened to be the officer.

About a year afterwards, says Roland Hill, Canadian War Correspondent, when the submarine menace was acute and ships were needed for food and not for lumber, to save tonnage from overseas, the King gave orders and the Canadians commenced cutting in Windsor Forest. The King remembered the brigadier and jokingly remarked that his words had come true. Ever since both His Majesty and the Queen have been keenly interested in the work of the Canadians on their estates and interested spectators at almost every field day.

The Growth of Wood Chopping Brigade

Since Brig.-Gen. Alec. McDougall raised the 224th Battalion, "The Woodchoppers," picked from all over Canada, the Canadian Forestry Corps has grown tremendously. There are now eighteen thousand men in the corps and the mills are counted by the score. The last figures give their daily cut for war purposes at 3,000,000 feet, anything from delicate spruce for aeroplanes to huge oak beams that support the new bridges we have built alongside those destroyed by the Huns. Gen. McDougall's activities took him from the Swiss border to Bordeaux and the south of France; from the north of Scotland to the south of England. He has travelled many thousands of miles watching operations in the last few months, and as the trains were not fast enough for him he was provided with a private aeroplane and pilot by the British Government. Now he literally "drops in" on his commands to see how work is progressing. He shuts up his desk in the office off Piccadilly, London, at ten in the morning and is at the Bordeaux, France, branch by evening. If the aeroplane industry wants a boost for industrial after-war business it can get one from Alec. McDougall.

McDougall was born the son of Lorne McDougall in a little town in Eastern Ontario in 1878 and comes of timber sires. He followed in his father's footsteps by becoming a gold medalist in mathematics at Toronto in 1899. His grandfather was a canny Scot who worked as a factor for the Hudson Bay Co. McDougall finished his education at Cornell, where he took a post graduate course in engineering and hydraulics. At the end of his college career he became construction engineer on the Mexican Street Railways, in which Canadian capital was interested.

From Mexico McDougall returned to Canada and was at first on the survey section of the Georgian Bay Railway. Then the contracting fever got hold of him and he took a sub-contract from MacArthur on the National Transcontinental at Dryden and in a few months joined the firm of O'Brien, Fowler and McDougall Brothers, which built other sections of the road. The two McDougalls, always interested in timber, just before the war were owners of large limits in Northern Ontario and Quebec and had one large mill at work. Since "Alec" went to war another has been started.

Col. McDougall, as he was when he took his battalion overseas, was looked upon with suspicion by the Imperial Royal Engineers, to which his unit was attached. There was no question of the Canadians' efficiency, but they were too fast for the company they were in. They started cutting at war pressure instead of slowly and perfectly, as was the custom of the engineers. The Imperials complained first of the slouchiness and lack of discipline of his lumbermen and millmen. McDougall soon remedied this—no light task that might have disconcerted a smaller man. He had them saluting like Grenadier Guards. But the call for timber was growing more urgent every hour as hundreds of thousands of feet were destroyed in the battle zone daily. McDougall and his picked men were hustled off to the shrapnel-pitted forests near the line and here they created new records for output, travelling up and down the front wherever there were war-scarred trees.

Like Oliver Twist the British command demanded more. McDougall said: "You want rough wood, not the planed, piano-top stuff you are wasting time on. Let me go to Canada and get more Canadian machinery and mill men and we will turn out what you want." They sent him back across the Atlantic with an appropriation of something like \$250,000. McDougall scoured Canada and the United States and placed orders for several million dollars' worth. His credit

was good in the lumber world. He took the chance of having it thrown back on him and "sweated blood," according to his own account, in case the war should end before it was all delivered. Some time after the British Government wanted even more machinery, but it was not to be had. All plant makers were busy on munition machinery.

They Got Results When Most Needed

At first the Canadian forestry companies in France were looked upon as "timber butchers." The French utilize every bit of wood and even the sawdust that comes from the mill. In the days of rush calls for two-by-fours the Canadians perhaps did ruthlessly slash down the forests and waste in sawing. They looked for production rather than economy. But when the demand was caught up with, some time in 1917, the big men in the corps began to improve the mills and cut carefully. They got their power from the sawdust and they cut the slabs that used to be wasted into slim, half-inch strips.

Brig.-Gen. Alec. McDougall had around him big guns in the lumber world of Canada and they were on their mettle. Col. J. B. White, who has just been promoted brigadier, and who is managing director of the Riordan Company, was one. He commanded all the districts in France. He had also Col. T. Jones, of the Spanish River Mills, who went over in command of the battalion he raised in Western Ontario, and when it was absorbed threw his whole energy into the development of the Forestry Corps in central France. Also there was Col. J. B. Johnston, formerly lecturer in mechanics at McGill, and an expert adviser to many of the largest engineering concerns in the Dominion. He took charge of the far-off Jura and Vosges mountain groups and generally solved all the engineering problems. All big-salaried men in Canada, working for colonel's pay and letting their business at home vegetate while "doing their bit."

In the last year of the war the Canadian mills have been brought to perfection, better in operation, production and economy than any in Canada, France or Britain, and the Canadians have gained a splendid name for efficiency. In addition, they have learned a thing or two themselves from which Canada will derive a benefit when they return. Some of the large tracts they have cut in France they have reafforested—every acre—and have cleaned up the forests in such a way that in a few years there will be fine trees again.

Ancient Oaks Will Get Surgical Attention

George and Martha Washington, two of the largest live oaks on earth, which are among the chief arboreal ornaments of Audubon Park in New Orleans, are to have attached to their suite a special surgeon to look after them and preserve them from the ravages of time. These trees have a diameter of eleven feet, and they are nearly perfect specimens of the chenevert or live oak, that adds so much romantic beauty to the coastal regions of Louisiana.

Harold Neal, a graduate of the Boston Institute of Technology, is the expert who will keep harm away from the half-century old giants, which despite their sizes, are extremely temperamental, and by no means as hardy as their rugged exterior and enormous dimensions would indicate.

Owen Sound Firm Buys Island Timber

The John Harrison and Sons Company, Limited, of Owen Sound, have purchased the timber on Fitzwilliam Island (Horse Island) southeast of the Manitoulin Island, and have one camp located there, and if the weather holds good another may be opened this winter. It is estimated that there is about a million railway ties on the island, besides a considerable amount of oak and pine. 200,000 ties will be taken out each year and at that rate it will be at least five years before the available timber has been taken off. The timber was purchased from an American firm, owners of the property, at a figure said to be in excess of \$100,000.

The returns of the traffic of the Lachine Canal for the past season show a decrease of 4,821,500 feet of lumber, board measure, passing through the canal from the Ottawa Valley to U. S. Ports by American canal boats. The returns also indicate a decrease of 8,523 cords of pulp wood and 35,437 tons of pulp. It should be mentioned, however, that the port was particularly busy in forwarding supplies for overseas, and that a larger volume of traffic than usual went by rail, owing to the lack of boats.

Wholesale Lumbermen Hear Good Reports

Work of the Association Reviewed and Expansion is the Watchword—Some Problems That Will Arise During 1919—Election of Officers

Progress and development were evidenced all along the line in reports presented, and the good work done by the Wholesale Lumber Dealers' Association, Inc., which held its first annual meeting on January 10th at the Albany Club, Toronto. The attendance was the largest of any gathering during the year and much interest was manifested in the proceedings, including the election of officers which aroused a spirited, but good-natured contest.

The report of the secretary-treasurer, H. Boulton, showed a substantial balance on the right side of the ledger, and on motion of D.

A. E. Clark,
Re-elected Chairman for 1919

A. E. Eckardt,
Re-elected Director for 1919

K. Johnston, seconded by Guy H. Long, a hearty vote of appreciation was tendered him for his efficient services, along with a substantial honorarium.

One of the most important features of the evening was the election of officers, and when the nominations were being opened for the board of directors, no less than 18 names were proposed, five to be elected. Although all the directors of 1918 modestly requested to be relieved of their duties, in order that new blood might be introduced in the organization, and the honors go around, the rank and file would not listen to any such proposal and thought that they should stand for another year. All were placed in nomination again and there was only one change on the board, W. J. Lovering taking the place of H. J. Terry, who was unable to be present, owing to absence from the city on business.

The choice of directors resulted as follows:—A. E. Clark, A. C. Manbert, A. E. Eckardt, C. W. Wilkinson, and W. J. Lovering. A. E. Clark was re-elected chairman for the coming year.

A gratifying evidence of the growth of the membership is that now 35 wholesale firms are connected with the W. L. D. A., whereas a year ago there were 22. This represents an increase of 60 per cent. The two latest concerns to become identified are the Victoria Harbor Lumber Company, Toronto, and the Hyde Lumber Company, of South Bend, Ind., who do considerable business in Toronto.

Mr. Clark Tells of What Has Been Done

The Chairman, Mr. A. E. Clark, delivered an interesting address, outlining the work of the past year, and referring to the importance of co-operation among the wholesale lumber dealers during the coming year. At the close of the first year of the Association's history, he said, they found themselves with a membership list of thirty-five wholesale lumber dealers, as compared with twenty-two members when the Association was organized, a year ago. This represented an increase of 60 per cent., and he was pleased also to be able to report that financially the Association was reasonably well on the right side.

During the past year the Association had carried on several different kinds of important work. One of the chief subjects of interest had been matters relating to transportation. These problems had required considerable watching. Order-in-Council and regulations is-

sued by the Canadian Railway War Board, which consisted entirely of representatives of the railway companies, had made it very necessary for people who made use of the railways for the shipment of freight, to keep a close watch upon affairs. It would be very necessary during the coming year that the Association should keep a careful eye upon the little quibbles and more important innovations that would be introduced by the railway companies into their rates and tariffs. Probably, during the coming year, they would be relieved of Order-in-Council government, but there would be huge re-organization of railway work in Canada and one of the chief problems of the Association would be to see that the shippers received reasonable service in connection with railway affairs.

The Chairman then referred to the work of the Credit Bureau, operated by the Association. Everyone who had subscribed to the Association was well aware of the good work that was being carried on by this Department in the way of checking up credits and eliminating trade parasites. He hoped that during the coming year the co-operation of the members would make the Credit Bureau even a much greater success than it had been in the past.

Referring to the subject of trade relations, the Chairman drew attention to the harmonious feeling existing between retailers and wholesalers through their Association. The unity of interest already developed among retailers and wholesalers would help to clear away many of the difficulties which had previously disturbed the trade.

The Co-operation of His Associates

As Chairman of the Association during its first year, Mr. Clark said that he had had the assistance of four as strong men as could be obtained for the service of any Board of Directors. Being a member of the Board of Directors of the Wholesale Lumber Dealers' Association was not all pleasure. There was considerable work to be accomplished and he felt that if the work was followed up as it should be during the coming year, the new Board would have a very arduous year's work. There were a great many matters to be considered and it would also be incumbent upon the incoming Board to direct the Association in such a manner that it would live up to its responsibilities in connection with the general work of reorganization now in progress throughout Canada. Their interests in the lumber business should be made to coincide with their interests in the State. He believed that in looking after their business interests they would, at the same time, be developing their sense of citizenship. He felt convinced that in their regular meetings, the members of the Association were obtaining a clearer and more effective conception of their duties to the State.

The Chairman then referred to the importance of such problems as those connected with labor, farming interests, tariff alterations, etc., pointing out the importance of co-operation among wholesalers to see that their interests were properly represented whenever occasion arose. The questions arising out of the rehabilitation of the returned soldier would also present many problems, some of which would be difficult to handle. Moreover, business men themselves would probably have a little rehabilitation to consider on their own account. There would also be very important problems to deal with in connection with railway ownership. These were all matters that lumbermen, both as lumbermen and as citizens, must view from the standpoint of unbiased opinion, setting aside selfish interests and working them out for the good of Canada, as well as for the good of the lumber business, whenever this could be done without sacrifice of the general welfare.

The Enjoyment of Business Life

Mr. A. C. Manbert, one of the Board of Directors, was next called upon to address the meeting. He said that he had very little to add to what the Chairman had said. It had been his pleasure, in times past, to have belonged to a number of lumbermen's associations, under various conditions, but he had not enjoyed, in any of these associations, relationships that were more pleasant, nor accomplishments that were more compelling or enduring than those of the Wholesale Lumber Dealers' Association during the past year.

Starting out with a small group of lumbermen, not all convinced of the possibility of doing what they were setting out to do, he thought that it spoke volumes for the efforts that had been brought into the work of the Association, that they should have realized so much of sincerity, generosity and general good feeling which had brought to

the Association, not only an added membership, but an added tone in the relationships between its members. Their lives were built up on these daily and regular relationships and enjoyments and they found that their enjoyments came out of the people they knew best and the situations that were best ascertained and clearest to them, and so, when they came to the meetings and felt that there was a spirit of good fellowship among the members—although they did not forget the rivalries of trade or get down to cutting out business keenness—they were satisfied to temper to all that keenness and competition with a spirit of fair play and geniality. They had accomplished this during the past year, and in doing so he felt they could feel satisfied that they had accomplished a great deal.

Mr. A. E. Eckardt expressed the pleasure which it had been to him to act as one of the Directors during the past year. He referred also to the valuable results secured by co-operation among retail lumbermen in Toronto through the Lumbermen's Credit Bureau, drawing attention to the fact that at their annual meeting, that afternoon, the

members of the Lumbermen's Credit Bureau had decided that in future a seat at the Bureau would have a value of \$100 in addition to the annual fees which members would pay.

A special sub-committee was appointed consisting of A. K. Johnson, R. McDonagh, J. R. Summers and C. G. Anderson, to arrange for a dinner which will be given by the members of the Association and other wholesalers in Toronto to the retail lumbermen on the occasion of the first annual convention of the O. R. L. D. A. in Toronto on Tuesday, February 11th, at the King Edward Hotel.

After the business of the evening was over, J. W. Bengough entertained the members for an hour by a series of humorous cartoons and lively anecdotes. Mr. Bengough is particularly adept with the crayons, and sketched a number of national characters, along with some local members of the organization, including Messrs. Manbert and Boulthbee, who, by reason of their hirsute adornment, he declared to be the most "Imperialistic" gentlemen in the gathering.

Importance of Trueing Up Band Wheels

Once each year, and during the holiday generally, every progressive band mill has an overhauling, and the grinding or trueing up of the band wheels becomes the most important job on hand. All mill mechanics dread this job because of its tedious nature, says R. C. Leibe in the "American Lumberman." The trueing of band wheels must be right, and if the job is not done right it is wrong and the wheels would have been better off if not touched, for there are many evils which will surely result. The importance of keeping the wheel faces true by refacing can not be overestimated, but the writer knows of a number of large band mills whose wheels have not been refaced for three years and more and yet expect good lumber from such a mill condition and seem to think it cheaper to invest in countless band saws rather than have the wheels refaced.

I mention shortening the cutting edge to overcome a worn wheel face. That is made possible by expanding the front quarter of the saw with the saw stretcher or roll so as to let the extreme cutting edge down on the low wheel face edge and stretching out the saw's back edge to balance up the disturbed tension. It stands to reason that such "fit-the-wheel" saw practice brings undue strain on the saw and causes serious cracking and breakage as well as weakened cutting edge, resulting in decreased output of the mill.

Now the advantages of having perfectly flat wheel faces may be summed up as follows: First and of greatest importance is the ideal condition produced for the band saw—for the saw is the heart of the mill and its producing ability depends thereon. The filer is enabled to fit up and tension his saws to a true circle tension from edge to edge, knowing the saws are to run on flat wheel faces. The saw strain gets advantage of the full saw width, and a high rate of feed may be maintained, which adds hundreds of thousands of feet of lumber to the day's cut. Furthermore, there is a saving of not less than one pair of band saws and in many cases three pairs a year with proper care of the saws by the filer, and even one pair of large bands saved from breakage and cracking means a neat little sum which might be better spent in belts which cause stops and lost time. There have been more competent saw filers condemned and discharged from filing rooms and mills because of this prevailing evil and neglect on the part of the mill managers than any other thing and a wise filer will never undertake to fit saws for a mill where it is a case of "fit-the-wheels" with your saws, for "we do not feel like buying a band wheel grinder when it is put to use only once a year." That is poor logic for any mill manager to offer the filer, but it's offered quite often and to the company's great harm. It is like spending \$10 to save \$1. The writer once took a filing position where the saw bills regularly amounted to a pair of saws every sixty days and the company seemed satisfied. The saws were cracked and brazed when quite new.

The wheel faces should always be examined by the filer the first thing to determine whether it is a case to fit his saws "regular" or fit worn wheel faces. This examination showed a pair of the worst wheel faces I had ever taken note of, and when the manager was asked for a wheel grinder the prompt reply was that it did not matter at all; that they had not been ground since the mill was built, and that was three and a half years past. The writer liked the location and mill and personally purchased a small refacer and refaced the wheels at night without loss of time. The cut increased and cracking stopped after the saws were readjusted to regular condition and a set of three saws was the next year's saw expense, with but one fracture in one saw. Three inches were worn off the cutting edge, while the com-

pany was satisfied with an inch worn off. This is an extreme case, I will admit, but many cases are to be found little less extreme than this one.

Again, another case, only different, but showing the importance of refacing. The wheels had been refaced only six months past and on examination showed little worn. The saws kept cracking and especially the brazes bursting open. The writer took notice of the top wheel seeming out of balance a trifle, but thought it dust in the rim of wheel; but to be sure took off the saw and, turning the wheel slowly with a pointer against the wheel face and at rest against the mill frame, found that the wheel face had a flat spot in it some 18 inches in length which was about 1/16-inch low in the middle. The wheel had doubtless a soft place at this point due to improper cooling when cast or a flaw in the metal. When the wheel was refaced or ground until this place came out the saw trouble ended at once. The flat spot

Fig. 1 (Left). Measurement of Band Wheel and Adjustment of Re-surfacer. Fig. 2. Test for Trueness of Wheel After Re-surfacing

tended to subject the saw under heavy strain to jerks, which produced the fractures.

Refacing becomes a simple matter, though dreaded by millmen. The writer has prepared drawings which show clearly his method of refacing band wheels to avoid mistakes. In Fig 1 will be seen a view of the top band wheel (front view). To determine the amount of grinding needed I first measure the edges with a steel tape line as shown in sketch. See (A), wheel, (B) and (C)—steel tape line, (D) is shaft. Next, I measure the distance from shaft to wheel edge at (E); then the same at (F) on the other edge; then place my refacer machine (let it be an emery wheel refacer of the old make, or Gebott machine, of the carborundum-block type) as shown at (G), and corresponding dotted lines and after getting the machine square with the shaft (not the wheel face) as shown at (H) and (I), then proceed to reface the wheel. I make examination often during the refacing to be sure the machine is square with the shaft.

In Fig. 2 is shown drawing of my tests after grinding or refacing; (1) is straight edge, (2) is wheel, (3) large square across wheel face.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Hemlock Wanted

Block of dry No. 1 and No. 2 Hemlock. Write the Elgie & Jarvis Lumber Co., Ltd., 18 Toronto St., Toronto, Ont. 2-3

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

2000 Cords Pulpwood Wanted

Am open to buy all kinds of pulpwood F.O.B. Cars. State lowest price with point of loading. Advance furnished. Box 841, Canada Lumberman, Toronto, Ontario. 2-5

Birch Wanted

Wanted 100,000 feet of Birch, Elm and Maple in log, f.o.b. cars.

HYSLOP & SONS,
Greenville, Ontario.

Wanted Cuts of Lumber

We will buy your cut of pine, spruce, hemlock and hardwood lumber and pay you cash or finance your operation. Advise what you have, to Box 838, Canada Lumberman, Toronto, Ontario. 2

Maple and Birch Wanted

Pushing Storm Door and Sash Trade

Two factors have taken some of the impetus away from the campaign started early last fall to

sell more storm doors and sash. One is the advent of peace, which has made saving coal for war industries a less pressing necessity, and the other is the mild weather which has been generally experienced. says the "Southern Lumberman."

This should not deter the retailer, however, from taking advantage of the improved market for this equipment which the publicity run by the manufacturers in leading newspapers has created. The writer was reminded of the value of this publicity recently when passing the warehouse of a dealer who has put up a big sign carrying the following words: "Buy Your Storm Sash Here."

The sign suggested that the lumbermen realized the effect that the advertising had already created—the greater appreciation of storm sash on the part of the public. It had got beyond the argument stage, for he was appealing directly to those who had been converted by the storm sash advertising, and who were at the point where the principal question was where to buy.

Likewise, the sign must have had an effect on those who had not seen or been influenced by the advertising. "Buy Your Storm Sash Here" is a good deal like the sign of "Rubbers" on a shoe store window on a rainy day; it suggests that sales argument in favor of the products are not needed, but that the weather conditions constitute an argument that every sensible person will admit the force of. Hence the very absence of qualification in the assumption of the need of storm sash helps to create a similar assumption in the mind of the prospective user, whether it has existed there before or not.

Retailers have been missing a sales opportunity in not pushing storm sash and doors heretofore, and the fact that conditions have changed since the general campaign to promote the sale of these goods was started should not affect the plans of the dealer who has the market, the stock and the will to put it into the hands of those who can make the best possible use of this equipment.

How Cost System is Advancing

Cost accounting is receiving more attention and special study to-day than ever, not only by the progressive individual lumberman, but by all business and trade organizations. In a recent notice received from a western lumber association, the following significant reference appears: "Plans for the introduction of a uniform system of accounting in all the mills now are complete and will be outlined to the delegates. It is plain that the industry never will be able to secure an accurate analysis of its operating costs unless the mills keep their accounts uniformly alike. After months of preparation the committee in

charge of this work is ready to introduce a system which all will be urged to adopt."

I Am Your Worst Enemy

I am the ruler of retail reverses. I am the Lord High Potentate of Failure.

I am the reason for that downward slant on your profit curve.

I am the cause of the silent sickness that stills your cash register bell.

I am the origin of dissatisfied customers and loss of trade.

I am the haven of uncertainty in the midst of certain profits.

I am the element of chance that turns a winning business into a losing gamble.

I am the fountain-head where springs the majority of your troubles and worry.

I am the key to the problem why more than 15,000 retailers fail every year.

I am the why and the wherefore, the direct and proximate cause, the germ and the genesis of unsuccessful merchandising.

I am the Sticker, the Shelf-Lounger, the Left-Over, the nameless child of an unknown father.

I am the unadvertised product! —Retail Public Ledger.

Review of Current Trade Conditions

Ontario and the East

The most interesting news of the week is the cable despatch that the timber controller of Great Britain will purchase in Canada half a billion standards of forest products or about one million feet, b.m. The intelligence has been received with much satisfaction by the industry in general. It is felt that this will create remarkable prosperity in the trade and it is understood that every Canadian producer who is registered on the list of the trade board at Ottawa will be afforded opportunity to sell. Purchases will be allocated upon a territorial basis and there is encouragement exuding on all sides. It is further stated, although the details have not yet been worked out, that the lumber must be delivered within the next twelve months and will aggregate in value between \$40,000,000 and \$50,000,000. In negotiations which will be carried on direct with Canadian lumber producers, word received from Ottawa states that the British Government will supply the requisite bottoms to carry the wood products to Great Britain. The big order is largely the result of the successful work and energy of the War Mission in London, England, which is headed by Mr. Lloyd Harris and the Canadian Lumbermen's Association.

It is said that the necessary Canadian credit which renders the huge lumber transaction possible was arranged between the Dominion Government and the Imperial Government some time ago and the credit is to be availed of to the extent that is rendered necessary by International Exchange.

Wholesale lumbermen who have been doubtful about the early placing of foreign business, have come to the conclusion that things are going to open up more rapidly and auspiciously than at first expected. Instead of present prices prevailing, they are talking of an advance on certain lines, particularly common lumber in 1 in. boards. Good siding, 3 in. deals and cutting-up lumber are in active demand while there is a scarcity of No. 2 culls. The number of enquiries continue to improve and everything looks bright for the future. There will be no lowering in the cost of logging this year as wages are being maintained at their present level while supplies range high and everything else in like proportion.

Shrewd dealers have been placing orders ahead of time. One leading buyer, in a neighboring city across the border, bought thirty-three cars of one inch, common poplar the other day. The salesman who called, was rather astonished at the size of the business, but the purchaser said: "I am willing to take a chance and pay present prices for I expect that values will go much higher. Toward the end of January every one will be looking around for stock and making inquiries and by that time I will have mine in. When every one enters the market you know what results, ascending prices, detentions in shipment, etc. I intend to be forehanded so as to avoid all this, and do not think that I am making a mistake."

Some Toronto firms report that mills in Quebec are already asking from four to six dollars higher for merchantable spruce for 1919 cut than they were at this time last year. A leading hardwood wholesaler states that, during the holiday period, he sold more birch and basswood to factories than he ever did during a corresponding season. The orders came from automobile and motor truck plants, piano and furniture factories, gramophone and other concerns, who seemed particularly pleased that they could secure the quantities required, and be assured of deliveries and, in all this business, there was no price cutting.

In some of the inquiries, which are being sent out by the Ottawa authorities, there does not appear to be sufficient data given. Terms are too loosely applied, especially when business has to be secured on a competitive price basis. One recent invitation was "for two inches and thicker, merchantable hardwood." The kind was not stated whether it was birch, maple, elm, etc. "Merchantable" is a widely differing term in certain provinces and may mean log run with culls out or perhaps something else. It is also too comprehensive and not specific enough, and then the woods desired should be definitely classified. There are no national rules or regulations in Canada determining just what is "merchantable." To the experienced lumberman who enters the market for supplying what is required on the basis of price, official terms should be more specific. Being capable of a very wide interpretation and a too general application leads frequently to misunderstanding and dissatisfaction.

The market for B. C. shingles is pretty firm at the present time, and there is not a surplus stock on the market. Owing to large exportations to the United States since the close of the war eastern re-

presentatives are finding it somewhat difficult to secure supplies. It is reported that fully 80 per cent. of the B. C. shingle mills are in full operation. The market for lath has also picked up some during the past few days and the outlook is considered fair.

United States

There are encouraging possibilities for a good demand for early spring business, with prices holding firm and already inquiries of a favorable character are being received from many quarters. In all leading centres there is a spirit of optimism and confidence prevailing which augurs happily for the future. Buying is, as yet, limited, but this is to be expected as the recovery from the holiday quietness will be slow. With the demand for export looming stronger all the while the feeling grows steadily that export trade will be very large. During the last year or two much necessary work has been set aside or held up, so that the new era should bring a tremendous improvement. It is felt that 1919 will be a banner year. It is said that the cut in Maine this season will be from twenty-five to fifty per cent. short, but, with the opening of the Panama Canal and lumber shipments coming through from the West Coast, this will more than offset any shortage in certain eastern sections.

A well-known Pittsburg firm presents a comprehensive review of the situation, saying that for several years domestic speculative building has been at a standstill, so that in all of the large centres there is a noticeable lack of housing facilities, which will necessitate a considerable revival in the building industry just as soon as everyone is satisfied that present values have come to stay. We are of the opinion that the present values are fixed and for the next few years to come we do not anticipate any lower values, but on the contrary believe that all commodities will command an even higher price than has prevailed under Government supervision in view of the fact that the demand will be greater. In addition to the revival of domestic building, we believe that all American manufacturers will secure an unusually large volume of export business which will more or less favorably affect the lumber industry since everything that is exported to the other side must be properly crated and boxed, which means prosperity for the box makers and a strong demand for all low grade material. In addition to this, while we are not able to conceive the large volume of lumber that will be required for reconstruction work, we firmly believe that the demands will be tremendous, so we can not help but feel optimistic as to the coming year.

It may mean a couple of months for the lumbermen to mark time and to keep a stiff backbone until business gets properly turned to a fixed peace basis, but we believe that this change will come quicker than many have expected and believe that before many months in the new year the mills will all be enjoying unusual prosperity.

It is regarded by the trade as practically certain that because of the virtual elimination of all imports of American hardwoods and timbers into Great Britain, France, Belgium and other foreign countries during the war, except for purely war purposes, there will be great demand from Europe. It is recognized that there is at present a scarcity of ocean freight room for the transportation of these commodities. It is also recognized that there is timber control in Great Britain and France and that, so far as other countries are concerned, there is little in the way of shipping room available. But it is pointed out that this demand must be filled if private industry abroad is to be rehabilitated and put back to work on anything like a normal basis and that, between the United States and British governments, between the British mercantile fleet and the American merchant marine, a way will be found to provide sufficient increase in shipping room to bring about gradual but steady increase in the quantity of lumber and forest products moving overseas during 1919. Inquiries have been already received for millions of feet among southern hardwood lumber manufacturers and the Southern Hardwood Traffic Association is organizing an export department that will put forth its best efforts to insure a cheap and rapid movement of lumber and forest products to Great Britain, France and other European countries.

The prevalent view regarding prices is not that they may be maintained, but that they must be maintained if actual loss is not to be suffered by hardwood producers. There has been no reduction in the cost of producing hardwoods. Labor is as high as heretofore. Foodstuffs cost as much as usual, if not more than at any previous

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

time. Machinery and timber are as high as ever. Logs must be hauled longer distances than ever before and the proportion of small trees is larger than it has ever been.

The market for the coming year, it is contended by a leading manufacturer, will depend entirely on the manufacturers themselves. Everything, he believes, depends on their intimate knowledge of costs to manufacture their product and do business; and combining this knowledge with a good measure of courage and initiative, he declares, will produce greatest results. This after-the-war business will be carried on on a different basis from the business of the past. It will not permit the former laxness, the former ignorance of its fundamentals and details, the former misinformation, based on inaccurate and merely superficial analyses. It will require a fuller introduction of science into production and marketing, closer application, a more complete knowledge of its details and of the conditions and influences regulating it. If one is to produce and market one's products intelligently, to best advantage and greatest profit, of the most necessary things to know intimately is costs. Without this knowledge the manufacturer can not fairly or profitably meet the competition of his neighbor who does know his costs and bases all his transactions on this knowledge. The future holds much in store, and in order to receive his full share of it the wise manufacturer will immediately set about remodeling his business along more scientific and modern lines, the first step of which is ascertaining his costs.

Great Britain

The relaxation in control of lumber and the relieving of the trade of a number of restrictions, which have prevailed during the greater portion of the war, have been received with a large measure of satisfaction. There is not yet complete emancipation, but it is sure to come in a few weeks. At a recent meeting of the Importers' Section of the Federation a resolution was carried to the effect that in the opinion of this meeting, the control should be removed at the earliest possible moment, and that, in the meantime, the system of permits should be abolished at once. The following are the concessions which have been granted; Home-grown wood may now be purchased without a permit; hardwood stocks of the Government are to be released to the trade; imported softwood may be sold in bigger quantities without restrictions. This last concession will probably necessitate the issue of larger quantities into the yards of retailers, and therefore make generally for greater freedom of action.

In regard to the imports of timber the reduction in November, as compared with a year ago, is not so heavy as it has been of late. In November, 1918, 185,964 loads, to the value of £1,855,009; in November, 1917, 272,512 loads, to the value of £2,614,628. This is a reduction of 31 per cent. in quantity and 29 per cent. in value. During the last two or three months the reduction, both in quan-

tity and value, has been nearly 50 per cent., and some improvement has therefore been made.

Speaking of the hardwood situation the "Timber Trade Journal" in a recent issue says: It is gratifying to have to report that a forward movement has been initiated by the Controller, whereby an approach towards the freedom of trade, as enjoyed in pre-war times, is effected. By the terms of the official notice relating to sleepers and softwoods, the Controller has cancelled the clause in the order of October, 1918, which made it obligatory on the part of the trade and consumers, to obtain permits for the sale or purchase of any imported or native-grown hardwoods and plywoods. This removes most aggravating restrictions which have tried the patience and fettered the action of the trade since the measure came into force. Sales and purchases or agreements for the same can therefore now proceed without restrictions and as freely as in former days. This is a first step towards emancipation. The next, and most important, is how the supplies are to be obtained in order to profit by the relief that has been afforded.

We understand that, at the prices fixed by brokers and agents on specified parcels of dunnage wood that were placed in their hands by the Government, business is taking place, a considerable demand having been found in many quarters for several descriptions of the stock. No regular or fixed prices have been put on these goods by the Controller—a wise proceeding, considering that, although graded in a certain measure, much diversity exists, as is usual, in the specifications, condition, and general quality of these parcels. Prices for the goods are considerably lower than most of the extreme rates that have ruled of late, but are nevertheless, and as might be expected, on an advanced scale. Such rates we have got to get used to, for it is extremely doubtful whether we shall ever again descend to a basis of rates such as ruled in pre-war days.

With these stocks and such negligible supplies that are still left in various directions in the market, trade is slowly moving, and the outlook in regard to future activity in most quarters appears generally satisfactory.

Canadian pine stocks were slightly reduced during the month. For waney pine, first class, about 3,000 cubic feet consumption left the present stock at 30,000 cubic feet, all held in Manchester. For second class there was little inquiry. For square pine, red pine, oak and elm there were no stocks. The light import of pine deals was again exceeded by deliveries. Stocks very light.

The imports of New Brunswick and Nova Scotia spruce to the Mersey, including the Manchester Canal, amounted to 2,540 standards, which included an entire cargo to Liverpool on Admiralty account. The consumption was restricted to 1,080 standards, rather more than half going from Manchester. Stocks, however, are on a very low footing, the total holdings of Liverpool and the Manchester Canal being only 4,370 standards.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Five Million Feet of Deals Sold at St. John

The New Year has ushered in a spirit of optimism for the lumber manufacturers of this section of the country. They certainly feel that with all the risks they take from time to time and are taking this winter they should have a fair profit on their year's business. If the manufacturers could sell direct they would be better off financially, but at the same time the element of credit would undoubtedly cause a greater risk to themselves. During the opening days of the year a further sale of some five million feet of deals has been put through to the British Munitions Board, at or around forty dollars per thousand feet free alongside ship. In the near future we shall likely see further sales to the British Government, as it is understood they are to purchase one billion feet of deals, etc., in Canada, that the question of credit has been settled and all that remains is the matter of price and the allotment of different quantities to various sections of the country. When this will be settled remains to be seen. The manufacturers are certainly waiting developments and are hoping to learn before long what they will have to look ahead to for the coming season.

The cut of logs on the St. John river and tributaries will be about the same as in 1918. This, of course, is providing snow remains to haul with and the driving in the spring is a success. Labor is not nearly so scarce as a month ago and woods wages are if anything somewhat easier, but the chopping season is well advanced and now it is horses and hauling logs to streams. It is said that the American

operators in Maine are increasing their cut over the early fall and winter plan and will now get about two-thirds their normal cut. Many deals are being loaded in transports at St. John, and will continue shipments as fast as boats are provided. Each steamer, if loaded to full capacity, will carry three and a half to five million feet, but the liners besides taking package cargo are all taking deals.

Local trade in factory material for the building trade shows a falling off the past two weeks and no doubt this condition will remain until such times as conditions settle themselves onto what demands the future will make on the trade. No building of houses or repair work is being attempted at present. Prices remain as firm as during the past two weeks and show no sign of weakening as there are no surplus stocks.

Montreal is Pleased Over Large British Purchase

Conditions in the Montreal market have not changed to any appreciable extent. Local trade is dull, but there has been an increase in inquiries from across the border. Wholesalers report that prices keep firm, and that there is no indication of any weakening—the trend is in the other direction. Generally speaking the view is that business will gradually pick up, although nothing in the shape of a boom is expected.

The chief topic of discussion is the report from London that the British Government will take a billion feet of Canadian lumber. It

No trouble to get this milk into camp—

Freshly pasteurized separated milk is reduced 90% in weight and bulk when by removing that percentage of water it becomes the dry powder KLIM. Its flavor is not changed, nor its food value lessened.

KLIM is the cheapest milk to ship, and the most nutritious for every day use. It comes to you from your supply house in cases holding six 10 pound tins. Ship any distance you wish as long as it is kept dry, and it will not freeze nor spoil. Store in any dry place. It is always ready for use, direct from the tin for mixing dry with flour, sugar, etc., in baking or cooking, or for whipping into water for use as a liquid.

KLIM is the best pasteurized milk in its most convenient form.

Wholesale supply houses will ship Klim in handy 10 lb. tins—6 tins to a case. Order a case with your next lot of grocery supplies. You will never regret it, neither will your men.

Canada Food Control—Blanket No. 165

has been known for sometime that negotiations were taking place, so that the announcement was not a surprise to many lumbermen; the amount cabled, however, was larger than was expected. It is probable that the shipments will be spread over a period of more than twelve months. The effect of the purchase will be to steady the general market, and also to harden values. Although stocks held for export are known to be very considerable, owing to restricted shipments last year, the taking off the market of such a large quantity of lumber cannot fail, it is held, to beneficially affect values. The news of the proposed purchase was very welcome to Montreal firms, who found their commercial business cut down to a low point during last year. A considerable amount of lumber left the port during the past season, but it was nearly all on Government account, part of which passed through the hands of exporters. Advices from Great Britain state that the restrictions on the lumber trade are being removed, and that all signs point to the business getting down very shortly to a normal basis.

The building permits for the year indicate that the season was better than was at one time anticipated. The total was \$4,882,873, a gain of \$495,235—this being the first year that an advance has to be recorded since 1913. Of the total, \$3,951,665 represented new buildings, and \$1,291,108 repairs. Only 269 new houses were erected.

The combined exports of pulpwood, pulp and paper continue to increase. For the month of October, the value of pulpwood was \$912,114, a gain of \$259,480; chemical pulp was \$2,914,255, a gain of \$951,969; mechanical pulp \$396,189, an increase of \$12,427; and of paper, \$3,317,237, an addition of \$479,000. Figures for the first seven months of the current fiscal year show a total of \$57,245,135, a gain of \$14,873,782 over the corresponding period of 1917, and of \$28,864,533 over 1916.

Ottawa Reports Little Change in the Situation

Little if any outward general change was shown in the Ottawa lumber market during the first two weeks of January as compared with the closing two weeks of last year. In comparison with a corresponding period a year ago the market was hardly as brisk. There was not the requisition for shell box stock nor was the demand from the United States the same.

Prices in all grades held firm. Sales were few and far between. Transportation remained good and labor conditions, if anything, picked up a little. Orders were reported a little more plentiful than during the closing period of December and inquiries remained about the same.

Following upon the holiday period the general tone of reports, while not the brightest, could have been a whole lot worse. In short, while there was not a great deal of activity, lumbermen were a long way from being downhearted and seemed quite content to wait until later on in the winter and early spring months for business to pick up.

The situation with the lumbermen seemed to be that "Rome was not built in a day," and even in the wildest dreams of their imagination they do not expect that conditions built up and brought about by four years of world war will change overnight into normal times and revert to ordinary business channels.

Business is coming, may be good business—better business than they ever had before, is the prospect, and the lumbermen are confident it will come. They are prepared to wait its arrival as time and conditions so will and welcome it when it gets back home again. Of course, any of the trade that sees trade approaching ahead of the other fellow is not going to wait till it arrives, but is going out to meet it. Meanwhile while nobody sees anything they all sit tight.

Taken all around the lumber trade seemed to be enjoying its usual winter nap, with this exception—everybody with lumber to sell "slept" with one eye open.

The outlook as to the spring months and early summer trade seemed more or less a hit-and-miss proposition. With the exporters to European countries the trade should strengthen considerably. On the other hand retailers and some wholesalers report that architects are not overly busy and have got no great amount of work ahead. They take this as a criterion of a slow summer. On the other hand, there are those who are quite content with the business they are doing—it may be small at present, but it is steady and they have strong hopes it will grow bigger.

Reports regarding woods operations were the brightest that have come through for many weeks. Operators are straining every nerve to catch up with the programme as originally mapped out and see if they can try to equal last year's output. The season, while it has been excellent for cutting, has so far been poor for hauling. Many bogs and swamps have not been frozen over sufficiently to permit teams to cross them.

The outlook for factory work for the next few months is not the brightest unless an unexpected big order for commercial houses comes from Europe soon. W. C. Edwards Company expects to continue through the winter on commercial boxes and other grades, but

with the remainder of the woodworking plants it looks like quiet season ahead. Shingle, lath, sash and door, and building grades remained practically at a standstill.

Canadian Lumbermen Honored by the King

In the list of New Year honors, it is pleasing to record that recognition has come to two well-known young Canadian lumbermen who have been rendering splendid service overseas.

Lieut.-Col. Frank J. Carew, officer commanding No. 1 district, Canadian Forestry Corps in France, has been made an officer of the Order of the British Empire. He is the eldest son of John Carew,

Lieut. Col. Frank Carew, Lindsay, Ont.

M. L. A. Lindsay, and previous to going abroad was associated with his father in the John Carew Lumber Co. Lieut.-Col. Carew is now in Alencon, France.

Major A. B. Gillies, of Gillies Bros., lumber manufacturers, Braeside, Ont., and a son of David Gillies of Carleton Place, Ont., has also been made an officer of the Order of the British Empire. The many Canadian friends of Col. Carew and Major Gillies will extend hearty congratulations on the honors they have won.

Newsy Happenings from St. John

From the present outlook a record will be established at St. John this season in the shipments of lumber overseas. Large ocean liners and sailing vessels are weekly carrying away quantities of deals for the British and French governments for reconstruction work in devastated regions in France and Belgium. On the C. P. O. S. liner, "Corinthian," which was recently wrecked on the north west ledge of Briar Island, in the Bay of Fundy, there were 106 standards of deals. Large quantities of Douglas Fir have been coming through to this port from the west for shipment overseas and are being forwarded by ocean liners to their destination. Quantities of clear spruce for aeroplane construction is also being shipped for the British government.

William L. McAdoo, of Kars, King's County, N. B.; George R. McKean, of St. John; and W. E. Golding, of St. John, have been incorporated under the name of the Hampstead Lumber Company Limited, with a capital stock of \$12,000. Their head office is to be at Hampstead, N. B. The company is empowered to carry on a general lumbering, milling and pulpwood business.

G. H. Prince, chief forester of New Brunswick, recently returned from Halifax, N. S., where he attended a conference with forestry experts upon matters of greater forest development in Nova Scotia.

Word received a few days ago by Elwood Burt, of Fredericton, N. B., from Cranbrook, B. C., stated that the crew working in his logging camp, some seventeen miles from that town, had been struck badly by influenza. Despite this, however, the report said that operations were continuing although handicapped by loss of help.

R. O'Leary, of Richibucto, N. B., reports that logging operations are now in full progress in his district. There is enough snow in the woods to carry on, but unless more falls work will be retarded.

Mrs. Brand, wife of James B. Brand, a lumberman, passed away recently, after a brief illness from pneumonia. Mr. and Mrs. Brand were on a trip to the States and on their return Mrs. Brand contracted a cold which quickly developed and death resulted.

The Purpose of the Saw Filing Room

Too Much Care Cannot Be Exercised in the Selection of the Gummer or Grinder

The fundamental principle of a filing room is to put saws into condition for cutting lumber. With this basis it will be our endeavor in the following discourse to show how this may be done in an economical and efficient manner, says C. A. Charles.

After we have decided to use saws, the next thing is to determine how these saws should be fitted in order to get the maximum output with the minimum input, since the expense of installing saws means that a return in dollars and cents of profit must naturally follow, for no man, or men, are in business for philanthropic notoriety.

The filing room should be equipped as nearly perfect as the nature of a mill will permit; some mills undoubtedly need more filing paraphernalia than others, while in other mills the reverse is true.

Beginning then, with those things most essential to the fitting of saws, the first thing to provide for the filing room is A. Filer, since the best equipment on the market is worth no more than scrap iron in the hands of a man who does not know how to use that equipment intelligently.

Many employers look upon the filing room as "one of those necessary evils" which attend the process of manufacturing any article of commercial value, and are content to entrust their money and profits to the hands of a \$2.00 a day filer, who in all probability does not really know the brazing tongs from a toothstop.

The Man in Charge and the Tools

When we have hired a man to do our filing, whom we know to be a good mechanic, we next should consult with him in regard to tools for the filing room, remembering at the same time to get those tools which are really needed, no more, and most certainly no fewer, than the work actually requires.

The heart of any filing room is, in our opinion, the saw gummer or grinder and too much care cannot be exercised in the selection of this important article. There may be the best of rolls installed (we take it for granted that the old time hammer artist has beaten his last tune and hung up his hammers, except for touching up small spots), the finest of swages and shapers, the keenest of grinding wheels, but with a grinder that does not grind square, is not free from vibration, and does not leave each succeeding tooth in the place its predecessor occupied, and above all one that does not operate smoothly both going into the gullet and also in raising over the backs of teeth,—unless the gummer has all these good points, our heartfelt prayer is "God Help the Poor Filer," his troubles will date from then until he leaves, is fired, or a new gummer is installed.

The following guide may be safely used when the question of purchasing a gummer arises; first, be sure to get a machine which will allow the saw to be hung around it: in other words, get a machine of the same hand as the saws. There are several reasons for this, but the most important one is, that the burr from the grinding wheel will then come on the inside of the saw blade, and will not tend to rub on the material as it is passing through the saw, because any rubbing of material on the blade tends to heat the saw and cause snaking.

Another reason is to conserve floor space, and we think most filers will agree with us that the majority of filing rooms do not have an over-abundance of unoccupied space. We might almost say as the poet did: "We ain't got room to cuss a cat, we have to back out of here to change our minds." It is also better to get a grinder a little

larger than necessary, for by so doing there is a little more body and weight to the machine which will help to do away with any vibration when power is applied. This question of vibration is certainly an important one. Lack of vibration gives us a nicely shaped and balanced tooth with the proper tooth form, while any grinder having excessive vibration will make the teeth more or less irregular and certainly will burn the face side of the teeth, causing them to case harden, and either crack off in the cut, or else crumble at the next swaging, and at the same time deform the swage die.

The Advantage of the Single Die

Be sure that the tooth is formed over one die. Some machines are built with two dies, and there is always more or less change in the position of the grinding head when going from one die to the other, which is not a very good feature. It is a great deal easier to set one die than two, to get the required shape, and then again the tooth shape can be kept more nearly correct by the use of the single die, which should be so designed that the grinding head falls easily into the gullet until it rises over the tip of the tooth-point.

The next point in grinder discussion is that of a spring end thrust for the grinding wheel. This should always be provided for no matter how heavy and rigid the machine may be built the tooth spacer will not always place teeth in exactly the same position and if this is not done "blued points" is the result, which, in turn, results in "cracking off" or "crumbling."

Just a word in closing, and we have covered the "Heart of the Filing Room." Keep all lost motion and loose joints out of the machine; fix all worn parts and bearings as soon as discovered, see that all wheel dust is carried away from the machine, and finally, go over the grinder at least once in two months to clean it up and see that all parts are "up to snuff."

Timber Limits on St. Anne Change Hands

The Canada Paper Co., Limited, of Windsor Mills, Que., have purchased the timber limits, No. 1 to 6, on the St. Anne River, which were formerly owned by William Power and Hiram Calvin. The area of the limits is about 200 square miles, and not a stick has ever been cut on them. There is a large quantity of white pine and spruce on the property, and the Canada Paper Company feel certain that in acquiring this timber land they are assured of an unlimited supply of pulp wood for very many years. The Canada Paper Company will adopt modern methods in cutting and reforestation. F. J. Campbell, who is general manager of the company, is also President of the Canadian Julp and Paper Association.

Five Thousand New Houses Wanted

The Toronto Building Trades League sent on a number of suggestions regarding the housing problem to the Board of Control, Toronto. They suggest that the city take steps to provide for the financing and erection of 5,000 six-room detached houses on lots at least 25 feet wide and 150 feet deep, to cost approximately \$2,750 each. The Ontario Government's Housing Scheme is recommended as a source of financing the scheme.

They also suggested that a large public hall, with seating capacity for 10,000 people, be built in the vicinity of College and Yonge streets, to be named Victory Hall, in honor of the downfall of Kaiserism. Erection of pavilions in the parks, and more public lavatories in the city, is also suggested.

Honest Clay Engines

Built for Dependability

Combining every improved mechanism of the modern gasoline engine, with the reliability of the steam engine. The Clay does the heavy duty speedily and efficiently, and may be operated economically on gasoline, kerosene or distillate. Especially adaptable for tugs or stationary work in the lumber camp. Send for descriptive booklet.

Honest Clay Engines have been on the market for twenty-one years, and most of the first engines put out are still in service.

The British Paper Markets are Your Opportunity

Establish a market for your paper stock now and it will be a great asset to you in after war trade with Great Britain. We can make very advantageous contracts for Canadian paper of all kinds and especially newspaper stock. This is a big opportunity for Canadian mill men. We are the largest paper makers' agents in Great Britain and will be glad to hear from manufacturers interested in export trade.

Write us to-day.

Canada Can Supply Timber Demands

Brigadier-General White Asserts that All Depends Upon Push and Aggressiveness to Capture European Business

The demand for lumber in France and England will be tremendous, said Brigadier-General J. B. White, D.S.O., director of Canadian forestry operations in France, in an interview with a representative of the "Canadian Lumberman." Brigadier-General White, who is manager of the woods and saw mills department of the Riordon Pulp & Lumber Co., Limited, Montreal, is home on leave.

The General went on to say that not only have the forests of England and France been depleted, but there has been practically no construction or renewals during the war. This work will have to be started now. It will all depend upon the aggressiveness and push of Canada lumbermen as to what share they will get of the trade. He is satisfied that Canada can supply any demands on her, provided the necessary bottoms are available, as we have the equipment and lumber to fill the requirements.

"One thing, however, must be borne in mind—we must live up to our contracts. If we promise to deliver certain grades of lumber we must do it; Canadian lumbermen have done so in the past, and must continue to do so, if we are to successfully compete with Norway and Sweden. We are now in a better position to do this than formerly, because those countries will not get labor at the former low wages," declared General White.

He could not insist too strongly upon the necessity of going after the European trade in an enterprising fashion. England has cut down many of her forests, thus depleting the domestic source of supply. Further, unless one has been over the devastated areas in France and Belgium and also other parts of these countries which have been in the hands of the Germans, he has no idea of the complete ruin which has been wrought by the Huns and of the necessities of France and Belgium in the way of structural materials.

The General's advice is to find out exactly what Great Britain, France and Belgium require, as he is convinced that Canada can supply the bulk of anything in the way of lumber that Europe wants.

The Canadian foresters have done by far the largest amount of forestry work in France. The Imperials and the French have done a goodly share, while the Americans have had a considerable force of foresters. The amount cut per man of the Canadian foresters was more than that of any other forestry units with the British and French armies, for the reason that the Canadians were better acquainted with forestry operations. Our men have produced over two million tons of lumber in France alone. There were 58 lumber companies on lumber production, in addition to eight companies building aerodromes for the Royal Air Forces. Six of the forestry companies and the eight aerodrome companies worked right up with the armies at all times.

Big Meeting of Forestry Association

The annual meeting of the Canadian Forestry Association will be held in Windsor Hotel, Montreal, on Wednesday and Thursday, January 29 and 30. The programme prepared is a most interesting one and it is hoped there will be a large and representative attendance. The proceedings are as follows:

Wednesday Morning, January 29th.—Annual Business Meeting Canadian Forestry Association.

Wednesday Afternoon.—Dual address by F. J. Campbell, President Canadian Pulp and Paper Association, and W. Gerard Power, President Canadian Lumbermen's Association.

Address by Major Barrington Moore, of New York, a well known American forester, recently returned from France.

Address by a Canadian forester, with overseas experience.

Address by Hon. W. R. Brown, (Brown Corporation), giving the results of clear cutting and selective cutting on the company's limits. Motion pictures.

Wednesday Evening.—Annual Meeting Quebec Forest Protective Association.

Thursday Morning and Afternoon, January 30th. (Auspices Quebec Forest Association).—Address by E. C. Hirst, State Forester of New Hampshire, on "Lumbering in Scotland."

Address by Lieut. Lewis, R.A.F., on "Aerial Photography."

Address by Lieut. Biggar, R.A.F., on the value of the Aeroplane in forest protection.

Address by J. W. Swaine, (Entomological Branch, Ottawa), on slash disposal in reference to protection to timber from insects.

Address on the feasibility of shash disposal.

The annual report of the Woodlands Section of the Canadian Pulp and Paper Association will be brought in and discussed. Motion pictures of aeroplane building, etc.

Thursday Evening.—Annual Meeting Canadian Society of Forest Engineers.

CANADIAN WOOD PULP

**We are the
LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

One hundred and forty thousand shell boxes, worth approximately \$138,000, were reported at Ottawa to have been turned over to the civic wood yard for fuel purposes, gratis, by the Imperial Munitions Board.

The Fesserton Timber Company, of Toronto, have sent out to the trade a unique and attractive calendar which bears a reproduction of J. L. Jerome Ferris' historical picture "Her Weight in Gold." The nuptial scene and environs are magnificently executed.

Terry & Gordon, of Toronto, have sent out to the trade one of the largest and most convenient office calendars that has been received. The figures are strikingly clear, while the printed matter in red and black stands out impressively.

Thos. Pink Company of Pembroke, who recently purchased the McFarlane-Neill plant at North Devon, N.B., intend making the same line of lumber tools in that factory as they have been turning out for years in Pembroke. The company also make whiffletrees, neckyokes, hames, threshing machine teeth and forks for unloading hay.

The following promotions will be gazetted shortly: Brigadier-General Alex. McDougall, Director-General of Timber Operations in England and France, to be Major-General; Col. Hepburn, M.P., his second in command, to be Brigadier-General; and Col. J. B. White, who commanded the Forestry detachments which did most of the timber work in France, to be Brigadier-General.

The Union Lumber Company of Toronto are loading a schooner at Halifax, N.S. with a half a million feet of white pine, which is being shipped to South America. This is an indication of the resumption of former trade activities and the release of more ships for export business. It is two years since the Union Lumber Company disposed of any merchandise in South America and much interest naturally attaches itself to the first consignment, which, it is hoped, will be the forerunner of continued expansion.

A charter has been granted to the Kyrö River Improvement Company with a capital stock of \$20,000 and headquarters in Port Arthur, Ont. The company is empowered to improve and develop the navigation of the Current and McIntyre Rivers and their tributaries and headwaters in the district of Thunder Bay and, for that purpose, to construct and maintain reservoirs, canals, dams, piers, booms, etc., in order to run, drive, boom, sort and raft logs and other timber in the rivers. Among the incorporators are Wm. K. Kyrö and M. Rissanen of Port Arthur.

Sir Joseph Flavelle, Chairman of the Imperial Munitions Board, in connection with his gift of 134,000 shell boxes to the City of Ottawa, states that a similar course is being adopted in regard to other cities and towns throughout the Dominion. At the present time there are surplus supplies of boxes at different points, ranging in number from 200 to 150,000. All these will be presented to the municipalities in which they are located. Sir Joseph said there would be no demand for these boxes now that all munition manufacturing in Canada had ceased, and that to store them was out of the question.

Judgment by consent has been entered by Justice Middleton of Toronto in the action brought by Hon. Peter McLaren, of Perth, Ont., against Col. A. G. Peuchen, of Toronto. Defendant agrees to pay plaintiff the sum of \$50,000 and costs fixed at \$1,250. Plaintiff sued defendant for \$158,385.45, principal and interest of a promissory note for \$141,000, dated August 11th, 1914, in connection with an alleged agreement to purchase certain timber limits and merchandise in the Province of Alberta for the sum of \$461,300. Defendant claimed that he had paid plaintiff, and claimed a large sum as a set-off for shortages and deficiencies, etc.

Eastern Canada

J. P. Dupuis, 592 Church St., Verdun, P.Q., is in the market for a sawmill with engine 60 to 70 h.p., also large log saw, double edger with accessories, etc.

The Riverside Mfg. Co., of Three Rivers, recently incorporated, has taken over the sawmills at Cap Madeleine, known for many years as the Burrill Mills. The mills at present are closed down, but will recommence manufacturing about June next.

A very handsome calendar has been sent out by the Fassett Lumber Company, of Fassett, P.Q. It is a beautiful piece of scenery, entitled "The Oaks at Sunset, Santa Ynez, Cal." and is a reproduction of Coutts famous painting.

The Eagle Lumber Company, Montreal, has issued a dainty and unique calendar entitled a Venetian Palace, being a reproduction of one of the finest canvasses from the brush of Sir Thos. Moran that master of color who spent many years in the ancient city of Doges.

It is announced that Price Bros., and Co., intend installing another paper-making machine in their large plant at Kenongami, Que., which will make five machines in all and afford a production of newsprint of over three hundred tons a day.

The T. G. McLaurin Co., Limited, Montreal, has been granted a federal charter with a capital stock of \$20,000, and among other things is empowered to buy, sell and deal in logs, ties, poles, posts, boxes, box board, wall board, pulp and paper and other products.

A federal charter has been granted to the Gravel Lumber Co., Limited, with head office in Montreal, and a capital stock of \$50,000 to carry on the business of manufacturers and dealers in logs, timber, pulp wood, railway ties and other products of the forest and to acquire, own and construct paper mills, saw mills, roasting plants, etc.

The Kipawa Fibre Co. Ltd., 335 Beaver Hall Square, Montreal, P.Q., have awarded contracts for the erection of their sulphite mill and power house at Temiskaming, P.Q., the cost to be \$3,106,000. C. B. Thorne, care

of company, is the manager of manufacturing, and Geo. A. Fuller Co. Ltd., 45 St. Alexander St., Montreal, are the general contractors.

The Pinder Lumber & Milling Co., Ltd., has been incorporated with head office at Pinder, N.B., and a capital stock of \$49,000, to purchase, acquire and take over the lumber, mill, mercantile and farming business now carried on by J. K. Pinder and G. T. Pinder of Pinder, N.B., and to conduct a general lumbering business in all its branches. James K. Pinder and George T. Pinder, of Pinder, the chief incorporators.

The Hampstead Lumber Co. Ltd., has been incorporated with capital stock of \$12,000, and chief place of business at Hampstead, N.B., to construct, establish or otherwise acquire, own, maintain and operate mills and factories for the manufacture of timber, lumber, pulpwood and any and all articles capable of being manufactured from the products of the forest. Among those interested are W. L. McAdoo of Kars, N.B., and G. R. McKean of St. John.

The Belgo-Canadian Pulp & Paper Company of Shawinigan Falls, P.Q., suffered a heavy loss by fire on January 3rd. It is estimated that the damage will reach \$100,000 and is covered by insurance. The blaze broke out in the large shed which is used for storing paper, preparatory to shipment and is thought to have started through a defective electric wire. There were some fifteen cars loaded with pulp and paper in the shed at the time and these along with the building were totally destroyed. The entire plant was threatened for a while.

The O'Brien Power Pulp & Paper Company, Ltd., has been incorporated with head office at Montreal, P. Q., and capital stock of \$2,500,000, to carry on in all its branches a lumber, timber and pulpwood business and to manufacture, produce, buy, sell and deal in timber, logs, lumber and wood of all kinds and for all purposes and the products and by-products, thereof; to construct and maintain and operate lumber and sawmills, etc. Among the incorporators are L. A. Cannon, King's Council, G. Parent, King's Council, and L. Casgrain, advocate, all of Quebec, city.

A federal charter has been granted to the Gravel Lumber Co., Limited, with head office in Levis, Que., and a capital stock of \$600,000. Among the incorporators are Sir William Price, Henry E. Price and Arthur J. Price of Quebec, and Alfred S. Gravel and Louis G. Gravel of Levis. The company will take over the business of the A. Gravel Lumber Co. of Levis. Wide powers are conferred on the new organization in the way of acquiring, owning, and operating sawmills, shingle mills, rossing plants and pulp and paper mills as well as buying, selling and dealing in the products thereof.

The Coburn Lumber Company Ltd., has been incorporated with head office at Ripples in the Parish of Sheffield in the County of Sunbury, N.B., and capital stock of \$48,000, to purchase, acquire and take over the lumber business heretofore carried on by Frank C. Coburn and Ernest M. Coburn, under the partnership name of F. C. Coburn & Son, at the Parish of Sheffield in the County of Sunbury, and generally to carry on and operate a lumber business in all its branches, including the logging, driving, sawing, manufacturing, shipping and selling of lumber and lumber products, etc. Among those interested are F. C. Coburn and E. M. Coburn, lumbermen of Sheffield, N.B., and A. R. Slipp, barrister of Fredericton, N.B.

Western Canada

The Pioneer Lumber Company, Leader, Sask., recently lost their lumber yard by fire.

The Jewell Lumber Co., Caithness, B.C., recently lost their lumber mills by fire. The loss is estimated at \$25,000.

The Shawnigan Lake Lumber Co. Ltd., Shawnigan Lake, B.C., recently suffered a serious loss by fire to their lumber mill and dry kilns.

A disastrous fire resulted in the complete destruction of the mill and dry kilns of the Shawnigan Lake Lumber Co., Ltd., on the east side of Shawnigan Lake. The loss was heavy, as the mill had a capacity of 60,000 feet per day.

Hon. T. D. Pattullo, Provincial Minister of Lands, states that the Government is obtaining surveys of Queen Charlotte Islands water powers with a view to assisting the establishment of a large new pulp and paper industry there.

The B. C. Stave and Heading Co. Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$25,000, to carry on business as coopers and manufacturers of barrels, kegs, casks, tubs, vats, tanks, buckets, pails, staves, veneer, headings, etc.

The Virginia Lumber Company, Ltd., has been incorporated with head office at Coombs, B.C., and capital stock of \$60,000, to carry on business as timber merchants, sawmill, shingle mill and pulp mill owners, loggers, lumbermen and to buy, sell, export, import and deal in saw logs, timber, piles, poles, lumber and wood of all kinds.

The Seabird Shingle Company, Ltd., has been incorporated with head office at Agassiz, B.C., and capital stock of \$25,000 to carry on the business of timber merchants, sawmill and shingle mill owners, loggers, lumbermen, and to prepare for market, import, export and deal in saw logs, shingle bolts, timber, lumber and wood of all kinds.

The Timberland Development Co. Ltd., has been incorporated with head office at New Westminster, B.C., and capital stock of \$1,000,000, to carry on business as box makers, woodworkers, timber merchants, lumbermen, loggers, sawmill, shingle mill, pulp mill and paper mill proprietors, and to deal and trade in lumber of every description.

Baskin and Stedman's new electric sawmill at Granite, B.C., is now running full blast. About 50 men are employed. They are at present working on a contract of 50,000 ties for the Canadian Pacific railway, which are being cut from white pine. Construction is nearly completed on the camp buildings, including the bunk house. Electricity is used for lighting purposes in the bunk house and boarding house.

It is the intention of the Masset Lumber Co. to erect a large pulp mill at Masset Inlet, B.C., in order to take care of the low-grade timber that has to be logged in their extensive spruce logging operations. The company are taking out between eight and ten million feet a month. A large wharf, four hundred feet long to which ocean-going vessels can tie up, has been built at Buckley Harbor, Masset Inlet. The company have recently installed a radial mill which is of the latest type and are erecting permanent homes for their workmen.

The Coppus Turbo Blower

Works wonders in producing the maximum of heat from waste or moist refuse fuel, even when the moisture content runs as high as 50%. No change in boiler setting necessary.

The Coppus Turbo Blower Will Double Your Boiler Efficiency Where Refuse is Burned

EDGEWATER SAW MILLS CO.
TAMPKINSVILLE, N. Y.

Sept. 30, 1915.

Gentlemen:—

Replying to yours of the 27th inst., regarding the Coppus Turbo Blowers, which we have purchased from you at different times since 1912, are pleased to say that the machines have operated quite satisfactorily and we consider them an essential part of our furnaces, when burning wet wood refuse.

Yours truly,
EDGEWATER SAW MILLS COMPANY,
JOHN MILLER, Manager.

The Reilly Multicoil

Has proven its claim as the most compact and efficient Feed Water Heater on the market, by its universally successful service under all conditions during the past fifty years. Its accessibility, non-sealing qualities, and the readiness with which it can be repaired are important factors in boiler house efficiency. The Reilly Multicoil is a paying investment because it is

**GOODHUE
BELTS**

“Acme Waterproof” Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with “Goodhue Belts” and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won’t stretch.

Do Not Take Our Word For It

The following are a few opinions of the trade regarding

Plibrico Jointless Fire Brick

for Furnace Linings, Dutch Ovens, Woodburners, Dry Kilns, etc. Photos of originals will be sent
on request. PLIBRICO FIRE BRICK can be installed by your own men and is being used from
Halifax to Vancouver for all purposes instead of Fire Brick and Fire Clay.

THE BALDWIN LUMBER CO., LTD.

RED CYPRESS

Baldwin, La.,
November 1, 1918.

To Whom it May Concern:—

We wish to state that we have for the
past year used Jointless Fire Brick mat-
terial furnished by Chas. Gruneberg &
Co. We have found this Brick a very
great service, as far as arch building is
concerned. It is especially good for patch
work. We have never been able to equip
completely any one furnace in order to give
it a thorough trial, because all of our fur-
naces were built before we started using
Jointless Fire Brick. Therefore, our ex-
perience has only been in replacing torn
out places with this fire brick and it has
given success.

With kindest regards, we are,
Yours truly,

THE BALDWIN LUMBER CO., LTD.
J. Allen Barrett,
Sec.-Treas.

J. M. BRIDGES

Manufacturers of

YELLOW PINE LUMBER

P.O. Pleasant Hill, La.
(Box 103)

November 11, 1918.

Gentlemen:

Replying to yours of the 5th inst. in re-
gard to the merits of your Jointless Fire
Brick.

I have been using it in constructing my
Dutch Ovens for more than a year now,
and find that there is economy in using it,
and can heartily recommend it to anyone
for that purpose.

Yours very truly,
J. M. BRIDGES.

JOHN E. DUBOIS

Manufacturer of

Yellow Pine and Hardwood Lumber

Home Office, DuBois, Pa.

Reply to Lake Mississippi,
November 6, 1918.

Gentlemen:—

Your letter of the 5th, asking about our
experience with Jointless Fire Brick, re-
ceived. We have used this brick for re-
pair work on our Dutch ovens and are well
pleased with the result. Some of the work
has now been about one year and is still in
good condition.

We expect to use more of it.

Yours very truly,
JOHN E. DUBOIS,
By J. E. Welch.

VACHERIE CYPRESS CO.

St. Patrick P. O., La.

November 6, 1918.

Gentlemen:—

In reply to yours of the 5th inst. asking
our opinion of the merits of your Jointless
Fire Brick, beg to say, that as far as we
have used this material, we are highly
pleased with the results.

We find it very easy to apply, any one
even not a brick layer can use it with best
of results. We have used it only to do re-
pair work on our furnaces, but are certain
that it would be a good thing for new work
and would outlast ordinary Fire Brick by a
large majority. If we are considering the
building of new furnaces, we should cer-
tainly try this material.

Very truly,
Vacherie Cypress Co.,
Geo. N. Tibbitts, Supt.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

PROCTOR SERVICE

We do not lose interest in Proctor Dryers immediately after selling and installing.

Once each year we aim to send an expert to inspect every Proctor Dryer in operation. If the dryer isn't right he MAKES IT RIGHT before leaving. We want every Proctor Dryer to be O.K. all the time.

Naturally, this service is of great value to the user and is appreciated, and this is one of the reasons why owners are always so willing to recommend Proctor Dryers.

Yes, it pays to install a Proctor Dryer from the service standpoint alone.

In addition we offer minimum floor space, minimum labor requirements, minimum heat and power consumption, maximum capacity, absolute constancy of temperature and humidity conditions and highest quality product.

Tell us your drying problem in detail. There's Proctor Dryer for every drying need.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of

Chapman Double Ball Bearings

—IN—

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

More Lumber Mill Testimony

"Extra Power" in Splendid Shape

After Three Years of Use

IN practically every line of industrial endeavor belt buyers are learning the merit of Extra Power Belting by testing it on the hard and troublesome drives.

Now comes a verdict from the far west. Mr. S. Thorp of the Forrest Mills of British Columbia tested an Extra Power Belt on a difficult drive.

This belt runs on the edger engine — under conditions as severe as can be found anywhere. The load is jerky and heavy. The belt speed is high—6050 feet per minute. A heavy tightener, set close to the drive pulley holds the belt down. An idler pulley also holds the belt down on the driven pulley.

"Your Extra Power Belt," he says, "which is 10-inch, 7-ply, has run on the edger for three years and has not given one minute's trouble, and at the present time doesn't look 10 per cent worse than when it was put on."

In selecting belting for your plant, remember that it does not pay to be sceptical. Get in touch with the nearest Goodyear belting man. Let him relate to you how the steam and water in pulp and paper mills; the slow, heavy pulls and the shifting pulleys in shell factories and machine shops; the high speed machines and heavy tighteners in lumber mills; the multiple pulley drives in textile mills; the exposed work of quarries, mines, cement plants and brick plants—all have been belted economically and well by Goodyear Extra Power.

ARROW HEAD SAWS

VANADIUM STEEL

Solid Tooth Circular Saws
Chisel Tooth Circular Saws
Gang Saws

Why is it that every lumberman using "ARROW HEAD" VANADIUM STEEL SAWS will use no other?

QUALITY is the answer.

This saw will make more logs than any other saw on the market.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Saw mill Machinery for either Band or Circular Mills.

LINK-BELT

FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed," we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show two types of Link-Belt here. Our catalogue shows many others. Send for a copy.

CANADIAN LINK-BELT COMPANY, LIMITED
Wellington and Peter Streets, Toronto

MADE AND CARRIED IN STOCK IN CANADA

They Said—

"We want to reach the Canadian Lumber Field by working along the line of least resistance. What would you recommend?"

We Said—

"The **Canada Lumberman and Woodworker** is the medium for you to use. It is the national lumber paper of the Dominion and covers thoroughly the Industry from coast to coast. An excellent medium, indeed, to reach the Canadian Lumber Industry."

Are you interested? If so, why not have us forward our advertising rates?

Canada Lumberman and Woodworker

347 Adelaide St. W., Toronto

The "108" in the Philippines

As installed in the plant of
Go Tamco, a Chinese
Manila, Philippine Islands

Wherever mouldings are to be made; especially where a machine is needed which is so sturdily built that it will run year in and year out with few or no repairs,

The No. 108 Open-Side Moulder

is the "Invariable Choice of the Man Who Knows." Besides its sturdiness and dependability, it has many labor saving features to commend it. All adjustments convenient for the operator. Knives ground and jointed on machine, set-ups quickly and easily made; these are but a few of the many things you will appreciate in the "108." Send for free illustrated circular.

HAMILTON, ONT. CANADA
U. S. PLANT: BELOIT, WISCONSIN

Lath Machine and Bolter

This machine is a combination of our No. 2 Bolter and No. 2 Lath Machine mounted on a single frame. The lath machine is made the opposite hand to our single machine. The illustration shows the lath machine side of the combination. In mills where the floor space is limited and the output must be large this machine is an ideal combination. The details of construction found in our No. 2 Lath Mill and No. 2 Bolter apply to the combined machine.

When you overhaul your mill get in touch with us about new equipment.

We have the following on hand ready for shipment.

one Portable Saw Mill outfit with Right Hand Saw Frame and Carriage—set of track timbers, also the following items:

No. 1 Log Jack with foot wheel and idlers.

No. 7 Log Jack with foot wheel and idlers.

10 inch by 42 ft. Steam Feed—furnished with vertical or horizontal valves.

Double acting set works in No. 1, 2 and 3 sizes.

We have one second hand plain slide valve engine, right hand, side crank, 9 x 15, suitable for a small sawmill plant.

Write at once for information regarding the above or any other machine you may need.

Nothing About Machinery Just About Ourselves—

Criticising one of our advertisements the other day, a member of a well-known advertising agency brought up the following point:—

“Here,” said he, “is a nice looking cut of a man piling lumber, and the words ‘Sawmill Machinery’ strung across it. That’s fine. So is the copy that tells me you furnish complete machinery and power plants for Portable, Medium and Heavy Sawmills, and so forth. At the bottom are the words, ‘Waterous Engine Works, Brantford, Canada.’ ”

“Did you ever stop to consider that you are telling the public absolutely nothing about yourselves?”

“You say you build Sawmill Machinery, but some firm with no experience or organization could put their name to that ad. and it would apply equally well.”

“You know, and I know, all about your firm,—but does the general public?—Do the men you are trying to reach with this, know that you have been in business for over 75 years?—That you are the largest Manufacturers of Sawmill Machinery in Canada?—That the first bandmill manufactured by you in 1890 *is still running to capacity?*—That it was the Waterous Engine Works Co. who made the double cutting bandmill a success?—That you have equipped over 60 per cent. of the largest mills in the country?—If they don’t know, why don’t you tell them?”

After he had left, that “Why don’t you tell them” kept bothering us so that we sat down and wrote what you have just read.

Then we walk over to the Sales Manager and let him read it. This is what he said:—“The public don’t want to know about us, they want to know if we build what they want to buy—they won’t read that stuff.”

Well, maybe so. Twenty-three issues out of the twenty-four a year we try to tell you about our Edgers, our Band mills, that we specialize in heavy carriages and so forth. Perhaps this will be a change.

Waterous

BRANTFORD, ONTARIO, CANADA

\$5,000,000.00

worth of mixed metal
sold annually.

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c. per lb.; West of Fort William, 68c., delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

FIRST IN QUALITY

American Model 5-77A Planer & Matcher

Everything is in this machine that is desirable in a High Speed Planer & Matcher. The Automatic Belt Release and Tighteners; the built-in Cutter Head Knife Jointers for both top and bottom heads; a system of Feed Roll Gearing where there are no chains and sprockets or immediate gears; quick and accurate adjusting and positive locking Matcher Legs; micrometer adjustment of Feed Rolls and Platen, are features that put the Model 5 ahead of all competitors.

American No. 34-C Inside Moulder

The general design and form of construction of the frame; the direct and simple system of Gearing; the massive Bed Plate supporting the Matcher Legs; the Side Clamping Boxes quickly removable for change of heads; the accurately fitted and easy adjustments throughout, are all features that make this the most up-to-date inside moulder on the market to-day.

Long-Bell Branded Lumber Nationally Advertised

In order that the public may become familiar with the uniform high quality of Long-Bell branded lumber, we have inaugurated a large national advertising campaign. Consumers will be told that

Long-Bell

is "The Mark On Quality Lumber."

Each advertisement refers the consumer to the retail lumber dealer. Such magazines as The Saturday Evening Post, Literary Digest, Review of Reviews, Scientific American, Country Life and architectural, building, engineering, manufacturing, railway and farm publications will carry advertisements impressing readers with the fact that Long-Bell branded lumber is lumber of quality and that every piece is trade-marked.

Long-Bell, nationally advertised, trade-marked lumber will satisfy your customers and increase your sales. Place your orders now.

The demand for Hardwood Lumber will undoubtedly be extremely large as soon as business gets under way on a peace basis.

Production is about 50 per cent. of normal and will remain so for a year or two at least.

few months of normal business will take every stick of dry hardwoods in the market.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 39

Toronto, February 1, 1919

No. 3

Canada's Opportunity to Extend Her Export Lumber Trade

The full realization of the tremendous possibilities of the export trade in forest products is dawning forcibly upon the mind of the manufacturers and wholesalers of the Dominion. They appreciate the fact that the door of opportunity is open and they intend to gain an entrance by impressing upon the mind of the buyers, brokers and consumers in the Old Land that the Dominion stands in the forefront in regard to supplying their lumber requirements. The producers are aware that quick action is necessary. The decision which was reached recently to send a capable and vigilant representative to the Mother Country to conduct a broad publicity campaign in the interest of native wood commodities, particularly those from Ontario, is one that strongly commends itself and should be productive of fruitful results. The Ontario Government is co-operating with the industry in this important and far-reaching step and will assume all the cost and provide all the facilities at the disposal of the administration with the exception of the salary, which will be borne by the lumbermen.

It is felt that by concerted action and well directed advertising and educational media that the uses of white pine and other woods may be vastly enlarged. It is believed that not only can the export of the standard products, which went forward before the outbreak of the war be greatly increased, but that by enlightenment through the medium of intensive propaganda work, additional thicknesses, sizes and grades may be included in requisitions from abroad.

Other countries are alert and seeking to capture huge portions of the business, and it is pleasing to read that, all things being equal, there is every disposition to favor the products of the Dominion. This attitude on the part of the Mother Land is well known and is forcefully presented in a recent editorial in the "Timber Trades Journal," of London, which advocates the importation of Canadian instead of Russian or Scandinavian woods.

Here is what is said on the subject, and the references will be

read with timely interest and appreciation. It is now up to the Canadian lumbermen to do their part and by united, aggressive action make Canada one of the greatest lumbering exporting countries in the world.

When timber importers and merchants talk about returning to the old ways, they must not overlook facts which will make such a return impossible for several seasons to come. Before the war, our largest source of supply for soft woods was Russia; the three chief ports in Russia were Archangel, Petrograd, and Riga, and during the coming season there is not the faintest chance of any of these places shipping a really appreciable quantity of timber. We shall certainly secure something from Archangel—probably not a quarter of her pre-war export—but as to Riga and Petrograd the prospects are very poor. On the other hand, the United States and Canada have been preparing during the war for a great expansion of their export trade; and for several reasons it is likely that Canada will, during this and the following season, assume a position as regards timber far more important than that she held before the war. Before the General Election the Premier announced his acceptance of the principle of Colonial preference, and, having been returned to power with an overwhelming majority, Mr. Lloyd George will now be in a position to put his ideas into practice. The difference between the import cost of Canadian and Scandinavian wood has never been great, because the woods have had to compete in the same market, and lately Scandinavian wood has risen in price more than Canadian. Were a preference given to imports of wood from our Colonies by means of an import duty on wood from neutral countries, a great impetus would be given to the Canadian industry, which would have lasting effects. In the distant future the vast resources of Russia will ensure that country the position of the chief wood-exporting nation, but this cannot be yet, and timber merchants, dealing with matters of the moment, will do well to turn their attention more to the Canadian products, and to accustom themselves to that market.

Stimulate Home Building By Well Directed Local Advertising

With the opening up of the spring season and the bright prospects for building operations the enterprising retail lumberman will not sit down in his office and expect business to come his way. The fact that he has been established so many years, has a well-equipped stock and delivers commodities promptly is not enough to attract trade. He must not think that because a better and bigger state of affairs is being ushered in that he naturally will get his share of it through force of circumstances or the natural law of average. The dealer who is going to have the largest turnover this year and keep pace with the times in development and results, is he who is planning now for spring structural operations and by a logical publicity campaign sees that the desire to build which many people have in mind, is cultivated and strengthened in every way.

There is no doubt that advertising is a tremendous force, a productive agency and too little attention has been given to it by the retail yardman. This is the reason that the "Canada Lumberman" from time to time has so much to say upon the absorbing topic. It has been pointed out that advertising of the right kind is just as potent to create the desire for a new house, a barn, a granary, a garage, a sleeping porch, a verandah, or other structure, useful or ornamental, as it is to incite the desire to own a new automobile or a new piano. The more publicity of a well directed, thoughtful and helpful character that can be put out by retail lumbermen concerning the home, its comfort, beauty, attractiveness, associations and delights, the larger will be the returns. These are features that cannot be played up too strongly. All that the alert lumber merchant has to do is to pick up some of the well-known weekly publications or write certain lumber associations and he will see that the home is the one big, central theme and around it has been built an appeal and sentiment which would

make any householder think of erecting a new house for himself or kindle the hopes of one, not already mated, to build a nest along the lines and ideas that are portrayed. This kind of advertising may be criticized by certain practical, matter-of-fact lumber retailers, but there can be no doubt that it arrests attention, stirs the imagination and translates thought into action.

The prospective is the most interesting in the affairs of life and imagination plays a conspicuous part along with sentiment and the rearing of ideals. Anything that can be done by the vigilant dealer to stimulate a desire for a home will prove in the end effective and remunerative. It has been asked how much money should the retailer spend for advertising, and while no hard and fast lines can be laid down, as much depends upon his stock, the community in which he resides, the possibilities for expansion, etc., certain facts may prove helpful. It must be remembered, however, that advertising should be continuous and planned with care and discrimination—not undertaken in a haphazard or hit and miss manner. It requires as much supervision and study as buying, selling or general merchandising.

Here is some data that should be of assistance to the members of the retail lumber trade. At a recent meeting of retailers engaged in various lines the subject of what proportion of sales should be spent for advertising was discussed at length, the prevailing opinion centering on 2 per cent. as a proper normal basis, to be increased under special circumstances. One dealer said that his method was to appropriate 3 per cent. of the last preceding year's sales, plus 3 per cent. of the expected increase for the ensuing year. From this it will be seen that in most retail lines 2 per cent. of gross sales is regarded as a conservative basis of advertising expenditure. Probably $2\frac{1}{2}$ per cent. would be nearer the average among live merchants. On the basis of 2 per cent. a lumber retailer whose annual sales amount to \$50,000 would be justified in advertising to the extent of \$1,000 a year, while one whose sales reach \$100,000 could appropriate \$2,000 without exceeding the average limit prevailing in other lines of business. Probably the lumber retailers who spend less than $1\frac{1}{2}$ per cent. for advertising are more numerous than those who exceed that amount.

Read what the "Lumber Co-operator" suggests that every yard man should have inserted in his home newspaper:—

Don't wait to build or repair—If you, like others, have been holding off—waiting for the cost of labor and materials to drop—take our friendly advice and postpone no longer.

We, like you, have been hoping that costs would drop, but the best information we can get points the other way. For instance, labor organizations have gone on record that wages shall not be reduced. In New York the building trades have reached an agreement with the contractors that wages shall be neither increased nor decreased for ONE YEAR. What is done in New York sets the pace for the State.

The Steel Corporation has announced a stabilized price—no reduction this year. Other building supplies follow steel.

The object of this announcement is to place before you what we know about the situation and to point out to you what, in our opinion, will happen, namely—there will be little, if any, change in building costs for at least a year.

If you have building to do or repairs to make nothing will be gained by waiting. Might better go ahead and get it done, have the use of it or save the destruction that lack of repairs entails.

This is a new era with new price levels. The sooner we accustom ourselves to the new conditions the better chance we have to come through.

How Leading Lights in Lumber Arena View Immediate Future

The attention of the lumber industry is now directed to the meeting of new conditions which have been created by the close of the war and gauging the requirements of the year 1919, in both the domestic and foreign arena. In a recent issue the "Canada Lumberman" presented a comprehensive review of conditions as outlined by leading manufacturers in divers parts of the Dominion, who pointed out, in no

uncertain manner, that so far as they could discern, present prices would prevail, if not be advanced; that production from various causes would not be as large as last season, and that, with operating costs at such a high level and an increased demand, owing to an anticipated industrial revival, there was basically every reason for confidence, prosperity and fruitful results.

There is no doubt that the world is calling industry to new endeavor and greater exertion and in this constructive programme, the exponents of the products of the forest will answer the call. The retrospective is always interesting, but the prospective is decidedly more so, particularly at this juncture. It is ever refreshing to learn the views of others. President W. Gerard Power, of the Canadian Lumbermen's Association, in a recent message to the industry, stated that there were many after-war problems to be faced, but there were none greater than many others that had been met and successfully solved by the Canadian lumberman. A period of unprecedented prosperity was opening up, and if the industry in Canada has the courage to go after the export business in a large, broad-minded spirit and on a co-operative basis, the period of transition and readjustment will be splendidly overcome and adequate preparation be made for the enormous trade, which will gravitate to the Dominion from war-torn Europe.

A message of a somewhat similar character and spirit has been sent out to the trade across the line by J. H. Kirby, President of the National Lumber Manufacturers' Association. It is interesting to note that it is redolent of the same high purpose that co-operation will bring prosperity and that the duties and responsibilities of the industry are commensurate to the vast task confronting the people on this side of the Atlantic. Mr. Kirby further says: Profiting by the experiences and sacrifices of a long war, the nations have come to a new understanding of their mutual obligations. As a great industry you will be called upon to share in these responsibilities. Out of the experiences of war you have learned that great things are accomplished today through organization and in your effort to find in the future prosperity for yourself you will know that your prosperity is dependent not upon the ruin of your neighbor but upon your willingness and readiness to share with him the fruits of a greater prosperity that will be for both.

The organized efforts of the lumber industry have been rewarded with uncommon success during the last year. The association of lumbermen represent the best thought and ability and the highest ideals of the industry. You will wisely follow that leadership and accept those high business ideals as your own, and you will contribute more generously and with greater interest and devotion to the activities of your various associations, upon which depend their success.

From far and near have come interviews and opinions of all branches of the trade on present conditions, outlook and prices. One that stands out clearly and forcibly in the atmosphere it breathes, the attitude adopted, the message conveyed and comprehensive summing up, is from W. M. Ritter, of Columbus, Ohio. It is so striking in character and so admirably portrays the present and future that the following excerpt will find a responsive echo in the heart of every progressive and patriotic leader of the industry.

"I believe the future is bright and full of promise and a great opportunity awaits the lumber industry as we enter the new year and the new and definite era of peace; and we should prepare for it with absolute confidence that it is coming. Nothing else will more effectively hasten its advent.

"But do not let us miss some of the lessons that the war has taught us. One of these that stands out in bold relief is that in co-ordination and co-operation lies industry's greatest strength and through this its greatest gains may be achieved. Unrestricted competition and bitter rivalry are destructive, wasteful, unnatural and uneconomic and should be eliminated. Industry owes it to itself to see that such laws are wisely enacted as are necessary not only to make legal but to encourage organizations and combinations, with, however, intelligent governmental supervision and regulation to prevent unfair monopoly. And the combined power of all lumber trade associations should at once be directed to securing the enactment of such laws.

"Again, we have learned from the war the lesson of humanity.

If this war has taught us anything, it is that the time for the pursuit of any kind of business or industry, with purely selfish, sordid motives, has passed. Absolute justice must be done to all parties in industry—the producer, the consumer and labor. Employers must be educated to a higher standard in their business methods, and to a better vision of their duty and responsibility to each other and their employees. Fair conditions and reasonable wages for labor should always be provided. Labor is entitled to receive sufficient compensation to insure a decent living under improved conditions, that will encourage progress and development of ability and efficiency. On the other hand labor must be expected and required to do its duty and deal fairly with the employer; and the principle must always be recognized that the

less efficient should receive less and the more efficient receive more than the average. The aim and desire of both should be mutually of service, upon the principle that the most useful and valuable servant of society, whether individual or industry, is the one able and willing to render the most efficient service. And the same mutuality of service must obtain between the producer and consumer. The rights of both must be preserved on a broad basis of justice and equity.

"Only by application of these principles shall we achieve the best results and establish that assurance of mutual trust, esteem and consideration which will result in the success and permanent prosperity of all."

Some Editorial Short Lengths

It was once said by a noted statesman that the 20th century belonged to Canada, and it looks from present indications as if the year 1919 would stand out as the great export era in the manufacture of wood products. The foreign field never presented as inviting a proposition as it does to-day and by going right after this business the lumbermen of the Dominion are showing a spirit and confidence which refuses to droop or falter just because things may be a little slow at the present time.

It may be asked what the average retail lumberman is doing to create building activity in his own community. Is he calmly waiting for business to come to him or is he getting out and meeting the public and doing all that he can by way of advice, interest and assistance to develop the go-ahead spirit of the centre in which he should be a live factor? The average yardman must remember that it is only by persistently hammering home the theme that now is the time to build and that wood is the best material to use for every purpose where wood is suitable that expansion will result. If the lumber industry is to share in the degree that it should in the era of prosperity that seems to be right at hand, there must be persistent pushing on the part of the retailer by every means in his power to see that no opportunity is neglected and that other industrial and commercial interests do not steal a march on the timber trade.

It is easy to cut prices. Any individual with less than an average amount of mentality can dispose of a product at a sacrifice, but it takes selling ability, courage and confidence to close a transaction in a regular way and get the prevailing figure. The wholesale lumbermen as a unit are not worrying over present quotations, but are fully confident that they will get for their stocks in hand every dollar that the merchandise is worth. The retail dealer should have the same stamina and decision. He has no excuse for cutting prices. If a bill figures \$22 and the customer says, "If you will make it \$20 I will give you the order and will not figure anywhere else," right then is when you need your "nerve" and salesmanship. \$2 sounds small, but it is ten per cent. of the amount of the bill, which is a good profit in itself that he is asking you for.

Are you a member of the lumber organization in your district, county or province? If not there is no time like the present to link up with your fellows in the trade. In most business propositions if the investor gets a little more out of them than he puts in he is thoroughly satisfied. In Association work, however, he gets much more than he gives. Do not hold aloof and selfishly denounce organization for some little shortcomings that it may have, but seek to lend it your support, co-operation and sympathy in order to make it as virile and active as possible. In educational work, in civic life, in public spirited bodies and trade bodies, as well as many other avenues of human endeavor there are too many people standing outside criticizing and knocking instead of getting in and working. It is a comparatively easy thing to tear down, but it is not so simple to construct. Be a builder and not a destroyer, a "boomster" instead of a "blighter." Attend the

first annual meeting of the Ontario Retail Lumber Dealers' Association, which will be held at the King Edward Hotel, Toronto, on Tuesday, February 11th. Come out and rub shoulders with your fellows. It will make you a bigger man in every way, mentally, morally and commercially.

During the first eleven months of 1918 there were 8,922 fires in Ontario, compared with 9,681 during the whole of 1917. The damage done up to December 1, 1918, was \$14,237,813, as against \$10,365,539 the previous year. Insurance covered \$9,129,523 of the loss during 1918. Matches were the largest individual factor in causing fires, being responsible for 82 outbreaks. Fire Marshal Heaton in his report recommends action by the legislature to prevent children and others from using the "strike-anywhere" match.

The public mind is being quickly educated to the point of demanding redress and satisfaction from those who cause fires by carelessness and culpable neglect.

It is understood that the Canadian Trade Commission, of Ottawa, in regard to the purchase of lumber for Great Britain have sent out a letter in which it is stated that the Imperial Government will not make any purchase direct of lumber and timber in Canada. While the exact method of purchasing and the manner in which it will be carried out cannot be definitely stated, the information in the possession of the Canadian Trade Commission is that the Timber Controller in Great Britain, is to ask all timber brokers and importers in the United Kingdom to purchase a definite quantity of Canadian timber which in turn will be distributed by them. By this means brokers and importers in the United Kingdom will be made familiar with and have direct dealings with Canadian producers. The Canadian Trade Commission will furnish lists of Canadian lumbermen desirous of engaging export business and the Canadian Trade Commission is assured that every producer will be afforded an opportunity of competing for the business.

An important deputation representing Northern Ontario interests, waited upon the Federal Government at Ottawa recently, and urged the canalization of the French River between Georgian Bay and Lake Nipissing. The lumbering, mining, pulpwood, paper making and other interests were represented, as well as Boards of Trade and various municipalities. It was pointed out by the principal speakers, one of whom was A. J. Young of North Bay, head of the Young Lumber Company, that the proposed canalization would cost in the neighborhood of \$16,000,000, or annual interest charges of \$720,000 at 4½ per cent. interest. These interest charges would be met by an estimated yearly revenue of \$750,000 from water powers. It was stated that the total cost of this great undertaking would be liquidated in eighteen years by additional customs receipts due to increased traffic and the saving in freight rates along by the shorter route available would in four years meet the cost of construction.

Ontario Lumbermen Going After Export

Enthusiastic Meeting Held and Aggressive Representative Will Be Sent Abroad By Provincial Government to do Educational Work

It is the intention of the lumber manufacturers of Ontario to place the wood products of the Province on the map so far as export trade to Great Britain is concerned. Definite, aggressive steps will be taken by means of an educational campaign to expand the general knowledge regarding Ontario forest products and by this method, it is hoped to secure a larger proportion of the business accruing in Great Britain as a result of the closing of the war.

It is felt that the intrinsic merit, varied uses and superior quality of white pine especially, are not widely enough known in the Old Land and, in order, to afford this particular kind of wood the prominence and prestige which it deserves, a competent and thoroughly trained representative will be sent abroad to conduct effective publicity work. Such a representative will not act as a sales agent, but will conduct a vigorous educational propaganda. It is recognized, to use a colloquial expression, that "Ontario has the goods."

The representative of the Ontario lumbermen will receive the official endorsement and credentials of the Ontario government, who will see that the necessary office facilities are provided. He will enjoy the full prestige of a direct appointee of the Department of Lands, Forests and Mines. Hon. G. Howard Ferguson, provincial minister, is acting in co-operation with the lumber manufacturers and the Ontario government will defray all the expenses in connection with the work and publicity campaign, except that the salary will be paid by the lumbermen.

At a well attended meeting of the lumbermen of Ontario, at which all parts of the province were represented, the important step, already outlined, was taken. The gathering was held at the Queen's Hotel, Toronto, on January 17, and the proposition discussed from every angle. W. E. Bigwood, of Graves, Bigwood & Co., presided, and among those who gave the delegates many pointers on the foreign market and the splendid opportunities which awaited the wood products of the province was Brigadier-General J. B. White, D.S.O., who recently returned from overseas on three months furlough. Brigadier General White, who, for many years, has been woods manager of the Riordon Pulp and Paper Co., had charge of the work of the Canadian Forestry Corps in France during the past two years and possesses a practical, intimate knowledge of the export market.

The Line of Action Pursued

After thorough consideration the following resolution, which fully explains itself, was adopted, being moved by W. J. Bell of the Spanish River Lumber Co., and seconded by Hon. George Gordon, of George Gordon & Co.

WHEREAS the Hon. G. H. Ferguson, Minister of Lands, Forests and Mines, under date of November 12th, 1918, addressed a letter to the Ontario lumbermen regarding the advisability of the Ontario lumbermen sending a representative to Great Britain to represent their interests, but who should be attached to the Ontario Government.

AND WHEREAS the lumbermen assembled to-day have fully discussed the subject, therefore, be it resolved: that it is the sense of the meeting that the Ontario Government send a man to Great Britain who is well trained in the technique of the business to represent the lumber industry of Ontario.

2. That this representative should be nominated by the lumberman.

3. That the duties of this representative shall be in a general way those of a Trade Commissioner, to promote, by suitable publicity, the common knowledge of the intrinsic merits of Ontario timber products, and increase their favor with the consuming public; to develop by all suitable means Ontario's right to share in British trade preference; and in all ways to emphasize the importance to British dealers and consumers of Ontario as a reliable source of timber supply; to enlarge the common knowledge of grades, thicknesses and styles of manufacture of Ontario products that new lines of use may be developed.

4. That this meeting recognizes the value of existing channels of conduct in the export trade, and that it is the idea in this appointment to aid and develop existing channels

and also the extension in all possible ways of the use of Ontario timber products.

5. That this representative be attached to the staff of the Ontario Government in Great Britain and supplied by them with the necessary credentials and office facilities to the end that he may enjoy in full the prestige of the Government in this relationship.

6. That the salary of the representative be met by the Ontario Lumbermen, but all other expenses be defrayed by the Ontario Government.

7. That the details of any arrangement be left to the following committee: J. R. Booth, W. C. Edwards & Co., McLauchlin Bros., Gillies Bros., Pembroke Lumber Co., Geo. Gordon & Co., Spanish River Lumber Co., Graves Bigwood & Co., McFadden & Malloy.

On motion of H. J. Bartlett of the Bartlett Lumber Co., seconded by J. S. Gillies, of Gillies Bros., a committee of Chairman W. E. Bigwood, Gordon C. Edwards, of W. C. Edwards & Co., and Hon. George Gordon, was appointed to name the committee to carry out the details of the arrangement. The firms whose names appear at the end of the resolution, will act with full power in the matter.

After the business proceedings were concluded the lumbermen visited the office of Hon. G. Howard Ferguson, Minister of Lands, Forest and Mines, where they were cordially received. The Minister promised them every support and encouragement, and congratulated them warmly on the progressive move that they had made which, he felt, would prove of great benefit to the province in general and the lumber industry in particular. He promised that the Government would do all in its power to facilitate the work and educational propaganda of the Ontario lumbermen and was pleased that such prompt and unanimous action had been taken in the important matter of developing the foreign timber trade of the province.

Mr. Manbert Named as Representative

In regard to the representative who could in every way qualify for the position, the name of A. C. Manbert, President of the Canadian General Co., Ltd., Toronto, was endorsed. There was complete unanimity regarding the wisdom of the selection. Mr. Manbert, who is widely known to the lumber industry, needs no extended reference in the columns of the "Canada Lumberman." He has had a life-long experience in the merchandizing end of the business and the general technique of the industry. He is a director of the Wholesale Lumber Association, Inc., Toronto; Chairman of the Lumbermen's Section of the Toronto Board of Trade, and a partner in Graves, Bigwood & Co. Previous to coming to Toronto, eleven years ago, Mr. Manbert was one of the leading figures with the firm Graves, Manbert, George & Co., in Buffalo, and on the formation of the Canadian General Lumber Co., Ltd., in Toronto, 1918, he was made President. Not only is he eminently fitted for the important duties from his long association with the merchandizing branch, but in publicity plans he is equally at home. An organizer and staunch advocate of the benefits of association work and the advantages of co-operation he stands in the front rank.

Speaking at the meeting Mr. Bigwood stated that he was, indeed, grateful for the many appreciative references made to his partner, Mr. Manbert, and thanked the proposers kindly for their words of praise of that gentleman. Mr. Bigwood added that he did not know whether Mr. Manbert could be spared from the firm, as there are only three executive heads in the company now to look after the work which had been formerly carried out by five. This, however, was a time when serious consideration should be given to economic problems of the day and some personal sacrifices made. The matter would, be fully and carefully weighed.

The Importance of Ontario Woods

In connection with the white pine industry it may be said that the annual output in Ontario is from 600,000,000 to 700,000,000 feet, b.m. Previous to the war white pine was exported to nearly every country on the globe. It is estimated that there are probably thirty mills in Ontario which are in a position to do an export business.

In the past the British consumer has taken three inch thickness with a comparatively small portion of the thinner lines. It is believed, by the educational work which will be carried on through

well directed mediums in Great Britain, that not only will the standard sizes bought in the past be purchased in large quantities, but that the demand will be increased to take in other thickness, sizes and grades produced by the Ontario mills.

In regard to the marketing of white pine and other wood products abroad, as pointed out in the resolution adopted by the Ontario lumbermen, the value of the prevailing channels is recognized. It is merely the intention of the representative of the lumber interests to aid and develop these existing sources in all ways possible. The appointee of the industry will in no sense act as a selling agent, but will devote his entire time and attention to making known in all available fields the intrinsic merit of Ontario wood products.

The Firms that Were Represented

Among those present at the meeting were: Hon. Geo. Gordon, North Bay, (Geo. Gordon & Co.); W. J. Bell, Sudbury, (Spanish Mills Co.); J. R. Stover, Blind River, (Eddy Bros.); H. H. Bishop, Nesterville, (Bishop Lumber Co.); G. W. Mitchell, N. Tonawanda, N.Y. (Hope Lumber Co.); J. J. McFadden, (Spragge, McFadden & Malloy; Geo. D. Jackson, Bay City, Mich., (Little Current Lumber Co.); Henry J. Bartlett, Orillia, (Skillings, Whitneys & Barnes); E. H. Walker, Midland, (Herman H. Hettler Lumber Co.); B. W. Arnold, Albany, N.Y. (Spanish Mills Co.); F. N. Waldie, Toronto, (Victoria Harbor Lumber Co.); C. N. Carney, Thessalon, (Hope Lumber Co.); M. T. Raymond, Cutler, (Spanish Mills Co.); R. L. Blackburn, Ottawa, (Hawkesbury Lumber Co.); Gordon C. Edwards, Ottawa, (W. C. Edwards & Co.); Walter M. Ross, Ottawa, (J. R. Booth); J. S. Gillies, Braeside, (Gillies Bros.); D. J. McLachlin, Atnprior, (McLachlin Bros.); W. R. Beatty, Pembroke, (Colonial Lumber Co.); E. A. Dunlop, M. L. A.; Pembroke, (Pembroke Lumber Co.);

Brig.-Gen. J. B. White, D. S. O., Montreal, (Riordon Pulp & Paper Co.); Walter C. Laidlaw, Toronto, (R. Laidlaw Lumber Co.); C. W. Wilkinson, Toronto, (Union Lumber Co.); A. C. Manbert, Toronto, (Canadian General Lumber Co.); W. E. Bigwood, Toronto, (Graves, Bigwood & Co.). Among others present, as visitors, were W. Gerard Power of St. Pacome, P.Q., president of the Canadian Lumbermen's Association; Geo. H. Belton, London, (Geo. H. Belton Lumber Co.), and C. H. Belton, Sarnia, (Laidlaw Lumber Co.), and Mr. Bailey, (Alger-Smith Co., Duluth, Wis.

Letters of regret at their inability to be present, but heartily endorsing the project of sending a representative abroad, were read from George B. Nicholson, M.P., of Austin & Nicholson, Chapleau, and H. H. Hettler of Herman H. Hettler Lumber Co., Midland.

Mr. Manbert Accepts the Post

At a meeting of the committee, held in Toronto on January 28, to carry out the details of sending a representative to Great Britain to conduct a propaganda campaign on behalf of the wood products of Ontario, the project was unanimously endorsed. A. C. Manbert, president of the Canadian General Lumber Company, whose name had been suggested at the general gathering on January 17, as the most competent and best qualified man available, was appointed to go overseas at as early a date as possible. It is understood that Mr. Manbert, with the consent of his associates in the Canadian General Lumber Company, Toronto, and Graves Bigwood & Company, Byng Inlet, Ont., will leave about the middle of February for the Old Country. The announcement that Mr. Manbert will take up the duties of the responsible position is one that will be received with much satisfaction on the part of the Ontario lumberman.

Railways Again Bring Up Stop-Off Service

They Would Double the Present Tariff and Impose Other Exactions—Lumber Manufacturers Are Opposed to Proposed Changes

It appears that the railways are entering upon a very aggressive campaign at the present time and that each week sees some new demand made upon shippers. It will be remembered that last spring something was heard of the proposal to increase the stop-off charge so far as dressing lumber in transit is concerned, from 1c. to 2c. per hundred lbs. and to raise the minimum charge per car from \$5 to \$8. The lumber companies put up vigorous opposition at the time, pointing out the injustice of the proposition and showing conclusively how it would effect certain mills adversely. The matter was then dropped and it was not supposed that the question would come up again, but with the ushering in of the new year, the proposition once more presents itself. This has caused S. B. Brown, assistant manager of the Canadian Manufacturers Association, Toronto, to send out notice to various lumber manufacturers in which it is asked that they voice their objections to the regulations in such a form that the transportation department may readily determine exactly what effect the exactions would have on the movement of traffic and to furnish details of any extra charges or costs which would result from the adoption of the new order of things.

A meeting of the lumbermen will be held this week and steps taken to lay before the Dominion Railway Board the objections to the proposed regulations going into effect. The arguments being set forth by the wood product manufacturers are that the recent freight increases have been sufficiently heavy without this additional tax being brought to bear. It is also stated that the service furnished by the railways has not been up to the mark. The new charges it is contended would bear heavily upon the small wholesaler and sawmiller, who have not a planing mill service at their disposal and the trade would in many other respects be hampered by irksome and non-essential rules and handicapped so far as the distribution of the products of many mills is concerned.

A Resume of the Restrictions.

The notice sent to the lumbermen, under date of January 22, by the Transportation Department of the C. M. A. reads in part as follows:

You will remember some time ago the carriers proposed to make certain changes in their regulations regarding the stopping off of lumber for dressing, kiln drying, resawing or sawing, and after several meetings with the carriers the matter was apparently dropped.

The Grand Trunk Railway have again sent another draft of proposed regulations which they desire to put in effect. We are advised that the other Canadian lines, Fort William, Port

Arthur, Westfort, Armstrong, and east, namely the C. P. R., Canadian National Railways, T. H. & B., Michigan Central and the various other lines, intend to adopt the same regulations.

The chief changes appear to be as follows:

1. An increase in the stop-off charge from the present 1c. to 2c. per 100 pounds, and in the minimum charge per car from the present \$5 to \$8.
2. Inclusion of a list of what will be considered by the railways as hardwood and softwood.
3. Inclusion of note that the arrangements will apply only on lumber and not on other commodities shown in the lumber tariffs.
4. Rearrangement of regulations under heading of "Dressing, Kiln-drying, Resawing or Sorting" as shown in Regulation "B."
5. Bill of lading requirements making it necessary to show number of feet and kind of lumber, that is, spruce, maple or birch, etc.

In addition to the above, whilst the charge for haul out of direct line remains at 1c. per ton per mile, minimum 20 miles, the clause requiring that the short line mileage must govern competitive traffic has been eliminated. Regulation "H" should also receive careful consideration.

The Railway Regulations Outlined.

The draft of the proposed regulations as sent by the railway is:

A. To be entitled to this arrangement, original shipping order, bill of lading and way-bill must clearly show the following information:

Measurement in feet.

Kind of lumber, i.e., whether spruce, maple, birch, etc.

Purpose of stop-over, i.e., whether for dressing, re-sawing, kiln-drying, must also show consignee and final destination.

If change in destination is required, request must be made by shippers prior to arrival of car at stop-over point.

B. Waybilling to stop-over points.

Agents will in all cases waybill inbound cars to stop-over point at carload rate, actual weight, subject to tariff minimum weight.

Waybilling from stop-off point.

Lumber must in all cases be re-shipped from stop-off point by same party to whom the material was originally consigned, and to

the same consignee and destination shown in original shipping order and bill of lading.

Dressing Kiln-drying, Re-sawing or Sorting. On re-shipment the car will be billed at balance of rate, actual weight, after deducting percentages authorized in paragraph G, subject to tariff min. weight, and surplus weight over and above percentages shown must be charged at local carload rate, applicable stop-off point to final destination, such surplus weight may be used in making up the C. L. minimum weight.

Where surplus weight is added at stop-off point, shippers have the privilege in lieu of payment of local carload rate from stop-off point on excess quantity, of surrendering for cancellation an additional expense bill from same point of origin and for same destination. Such additional expense bill must be cancelled in its entirety.

Transit privilege will not be applied on expense bills covering lumber originally consigned to stop-off point for local consumption, such shipments must be charged as provided in item "B."

C. If stop-off point is not on the direct run, a charge of one (1) cent per ton per mile (minimum 20 miles) for haul out of the direct run, will be made in addition to stop-off charge.

D. Stop-off charge and charge for haul out of direct run, if any, will be based on inbound weight to stop-off point. Where additional expense bill is surrendered, as provided for in item "B" stop-off charge will be assessed on weight of inbound tonnage cancelled.

E. Original receipted expense bill, covering inbound shipments, must be surrendered for cancellation at time of reshipment, and outbound billing must show reference to inbound waybill.

F. If cars are required to be switched to the tracks of a connecting railway at stop-off point, switching charges both inbound and outbound of such connecting lines, will be in addition to through rates.

G. Where dressing, re-sawing or kiln-drying in transit is performed the outbound weight upon which transit privilege is granted must not exceed the following percentages of the weight shipped to stop-off point:

85 per cent. when re-sawn and dressed.

90 per cent. when dressed only.

85 per cent. when kiln-dried.

95 per cent. when re-sawn in the rough.

No deduction when sorting only is performed.

H. When lumber is shipped to stop-off point for sorting, etc., and is reconsigned to another delivery in the same terminal, the published local switching charges will govern from such dressing mill or sorting yard to final delivery.

63. Lumber, C. L., for dressing, kiln-drying, re-sawing or sorting and reshipment.

Shipments of rough lumber, carloads, originating in Canada at Westford, Armstrong, Ont., and east thereof, for dressing, kiln-drying, re-sawing, or sorting and re-shipment (for time limit see Note) may be given the benefit of through rate, original shipping point to final destination, in effect at the time of shipment from point of origin, plus stop-off charges of 2 cents per 100 lbs., minimum \$8 per car ((subject to item C) under the following conditions:

Time allowed
after arrival
stop-off point.

Only one stop-off will be allowed.

When reshipped to points in Canada for Domestic consumption: 30 days

When reshipped to points in United States for Domestic consumption:

When dressed, resawn or kiln-dried: 30 days

When sorted: 6 months

When reshipped for export: 6 months

Dressing—(See Notes)—

This privilege will apply only to rough lumber that is to be surface planed or tongued and grooved, and will not apply to lumber that is worked into shape, which comes under the heading of "Joiner's Work" in the Canadian Freight Classification.

Re-sawing—(See Notes)—

This privilege will apply only to lumber re-sawn the full length of the board.

No Substitution Will Be Allowed.

Note 1.—The stop-off privilege will apply only to straight car loads of hardwood, or straight car loads of soft wood, not on mixed cars of hardwood and soft wood, i.e., soft wood lumber must not be substituted for hardwood or vice versa, nor can one kind of soft wood be substituted for another, or one kind of hardwood for another; for example: pine substituted for spruce; oak for maple; pine for oak or maple, etc. Neither is it permissible to substitute United States lumber for Canadian lumber.

To prevent substitution, and for the information of agents, a list of softwood and hardwood lumber is given below:

Hardwood—Ash, basswood, beech, birch, butternut, chestnut, elm, hickory, maple, poplar, oak, whitewood.

Softwood—Balsam, cedar, fir, hemlock, pine, spruce tamarac.

Note 2.—This privilege will apply only to lumber and not to other commodities shown in the lumber tariff.

Note 3. Where there is any substitution of lumber, current tariff rate will apply from stop-off point.

Note 4.—On shipments destined to points on connecting lines, the connecting lines are to be allowed in re-billing their proportion of the through rate from original point of shipment to final destination based on the outbound weight from re-shipping point. If the balance of the rate from stop-off point is not sufficient to meet connecting lines' revenue, the difference required is to be waybilled as a foreign prepay and agents will make application to freight claims auditor for clearance of the amount so billed.

Note 5.—On shipments of lumber originating at stations on one line and stopped in transit at stations on another line, the following rule will govern the adjustment of charges. In re-billing from stop-off point the weight on which the transit privilege is granted will be charged the through rate point of origin to final destination in effect at the time shipment was forwarded from the point of origin; such charges will be divided on established percentages point of origin to final destination. The difference between the weight at original point of shipment and the weight on which transit privilege is granted from stop-off point will be charged at the joint rate in effect point of origin to stop-off point; such charges to be divided on established percentages point of origin to stop-off point.

Newsy Briefs from the Busy East

Properties of the Swedish Canadian Lumber Company in Richibucto, N.B., were sold by auction in the court house, recently. It was one of the biggest sales of lumber properties by auction ever held in that country, and many leading lumbermen were in attendance. H. A. Powell, K.C., of St. John, was there in the interests of the creditors, and to act in an advisory capacity. The properties were bid in as follows: Lots 1724 and 1725 at Bartibogge, 5 square miles, by W. D. Gunter of Fredericton, for \$1,250. Lot 2360 to lot 2366, nineteen and one-half square miles at Blackville, by Archie Alcorn of Blackville for 2,150. The balance of the Swedish Canadian Lumber Company property, consisting of a mill at Rexton, a mill at Richibucto and all other properties such as lands in Kent County, a number of farms in the county of Kent, and all the wharves and scows, etc., were bid in by W. D. Gunter for \$6,700.

Information received at the department of lands and mines in Fredericton indicate that the cut of lumber on crown lands in New Brunswick this winter will equal that of last year. This is contrary to the expectation at the first of the winter season, when influenza made such inroads in the crews in the woods. The labor situation has also remedied itself, due to the ending of the war and the subsequent discharge of soldiers. Hon. E. A. Smith, Minister of Lands and Mines, is pleased with the prospects of the cut, which is expected to approach the average.

A heavy movement of manufactured lumber out of New Brunswick will take place in the spring. It is expected that a portion of the order of the British Government will be filed in this province. There will also be a heavy shipment to the States and overseas.

Senator N. M. Jones, general manager of the Nashwaak Pulp & Paper Mills at Union Point, St. John, speaking to a representative of the "Canada Lumberman," said that the proposal to remove the mill from St. John to Marysville is a business deal and has been under consideration for nearly three years. The timbers for the erection of a dam, he said, had been gathered some time ago and taken to Marysville. Regarding the output of the new mill the Senator said that eighty tons of finished product would be turned out daily, compared with fifty from the mill in St. John. The new mill will employ from 200 to 250 men. New machinery will be installed, as much of the equipment of the old mill at Union Point is antiquated. Already about 10,000,000 feet of pulp wood is lying at the mouth of the Nashwaak or in about the streams and along with this winter's cut will ensure raw material for two years.

Piano manufacturers in the Maritime Provinces have been having difficulty securing sounding boards for their instruments owing to the great demand for clear spruce, which was made by the government for the construction of airplanes. Sounding boards and airplane beams call for the same quality of stock and now that the great demand for the later will be lessened owing to the cessation of hostilities, the piano men will be able to secure the desired wood.

Newcastle, N.B., is beginning to be recognized as one of the large lumber manufacturing centres. A large mill is being built there by James Robinson of Millerton. The new structure is over 200 feet long and 65 feet wide and is to be equipped with machinery of the most modern type. The mill will have a capacity of 60,000 feet a day and will give employment to a large number of men.

How Capt. Robt. Dollar Went "Over the Top"

From Chore Boy in an Ottawa District Logging Camp He Has Become One of the Greatest Figures in Lumbering Industry—What He Faced and Learned

The early days of logging and lumbering in the Muskoka and Georgian Bay districts are vividly recalled by two recent incidents and the reminiscences related will be perused with more than passing interest.

One of these incidents is the receipt of a letter from J. S. Thompson of the Badger Box and Lumber Co., Grand Rapids, Wis., a pioneer lumberjack, by Monteith Brothers of Rosseau, Ont. The other is the graphic and racy sketch of the picturesque career of Captain Robert Dollar, one of the foremost figures in timber operations on the American continent, from the pen of B. C. Forbes in the "American Magazine".

In a communication to the "Canada Lumberman," Monteith Brothers, who are widely known lumber dealers and manufacturers, state that, during the past summer one of the guests at the Monteith House, in the course of a casual conversation, mentioned the name of a relative, who came from the vicinity of Barrie, Ont., and knew the Monteith family in the old days. Monteith Bros. immediately wrote to this gentleman, J. S. Thompson, of Grand Rapids, Wis. His highly interesting reply follows and fully explains itself:

December 31st, 1918.

"Your communication is almost like a letter from home. Years ago, so many that the writer, who still believes himself a young man, hates to think of them having gone into the discard, chased around Muskoka and the Georgian Bay in various pursuits in connection with lumbering. I recall when Gravenhurst was the end of the line and Bracebridge, Huntsville, Rosseau were only accessible by boat or on foot. Waubaushene, Penetang, and Midland, Muskosh and Victoria Harbor all cut up millions of feet of the kind of white pine that now one only reads about. Byng Inlet, Parry Sound and the French River also did their share of it; then we moved West and Spanish River, Cooks Mills, and various other Georgian Bay points kept up the slaughter. I wonder how much there is left:

"I swamped and run the caboose for "Bob" Dollar near Baysville. By the way, the current issue of the "American Magazine" has a write-up of Dollar, that is worth anyone's while to read, who knew of his Bracebridge and Muskoka days; and the kind of a genuine decent Scotchman he was. He has become a very big man in this country. I do not believe any of his old friends will begrudge him his success; I knew his whole family of brothers, John, Bill and Joe, also the whole cab-oodle of his foremen, Archy Graham, Jack Brennan, Sandy Cameron, and dozens of others of them.

"I knew H. H. Cook when he was cock-of-the-walk at Midland, and for whom Dollar was boss of timber operations. I knew Cook Brothers and was with them when they drove the first pile for their mill at Serpent River, now I believe called Sprague. Orillia, Barrie, Collingwood and Owen Sound were familiar playgrounds when work got too much on one's nerves and recreation was needed; Lindsay and Peterborough also got their share of attention, but my really and truly hang-out was Midland.

"Thirty years ago, or perhaps thirty-five, the people in that burg or within 100 miles of it, who did not know "Jack" Thompson, had failed to get an education along his lines of least resistance; possibly to their advantage, but be that as it may, he survived, and for a long, long time has never had the pleasure of meeting or hearing from any of the old gang, who used to make things hum. Now he is paying up for past rolling stone proclivities by being happy and contented, the dad of a dandy son, who has just been mustered out with a Commission after three years' service in the American Army; a daughter with two of the finest kids a grand-dad ever fussed over, and a business, that while not the biggest on earth, is yet fairly representative in its class and which, so far, under his management, has succeeded in keeping the wolf from the door, and is gathering some of the moss that did not get a chance to stick, when the 24th of May was the Fourth of July and "God Save the Queen" his National Anthem. Of course, I know this screed has not interested you, but for all that it has served its purpose. It has given me a chance to look back and recall old times and old acquaintances and I believe it is true that later associations never quite replace the memory of those which have gone before."

The Career of a Wonderful Scotchman

And here follows the story of the trials and triumphs of Captain Robert Dollar as narrated by B. C. Forbes, who presents in detail the

sterling qualities, indomitable will, sound common sense, indefatigable energy and remarkable vision of the distinguished lumberman, who is not only well and worthily known in Canada, but all over the civilized world:

"Success is largely a matter of foresight."

"But how can foresight be cultivated?"

"Think for yourself, think hard and think ahead. Then prepare for your next move. The man or nation that is fully prepared has the advantage. Germany's wonderful initial successes were due wholly to her foresight and her preparations for war.

"Clear vision comes from clear thinking, and clear thinking can come only from accurate knowledge. To gain accurate knowledge don't go by hearsay. Before you make any vital decision investigate all the facts and circumstances for yourself. Go to the spot, no matter where it is, and see things with your own eyes. Gather all

Captain Robert Dollar

the data you can at first hand. Of course, listen to what others tell you and examine whatever statements they submit. But do your own thinking, based on your own knowledge of the facts, and make your own decisions. Shape your own course. You can arrive at a better judgment than anyone else could make for you, since you are the one mainly concerned and you are likely to give it more painstaking thought than anyone else.

"In time, by zealous application, foresight becomes sort of intuitive. You feel whether your judgment is likely to turn out right or wrong. For example, I had a 'hunch' that an upheaval was coming in 1907, and we put our business in order in all parts of the world to meet it. When the terrible panic of that year broke it found us prepared, solid, and we weathered the storm successfully."

Our speaker is Robert Dollar, the foremost business man on the Pacific, creator and owner of the famous Dollar Steamship Lines, a penniless lumberjack who became a "lumber king"; the man who has done more than any other human being to promote friendship and commerce between the yellow races and the United States, and whose reputation for integrity and ability is such that he was recently commissioned by the United States Government to arrange a thirty-million-dollar shipbuilding contract with the Chinese Government, and was made the depository for receiving these millions without even being asked by either nation to put up a bond!

How came Robert Dollar to attain such conspicuous success in business and such a superlative reputation for ability and integrity?

He says others can do more than he has ever achieved because the opportunities at this time are greater, the facilities are better, and the difficulties are less.

"Tell me how you did it!" I exhorted.

"You are very familiar with my whole career," he countered.

"I'm not so fond of talking as I am of acting. You know how I went about it—and surely no boy ever had a poorer start or less encouraging experience as a youth than I had."

"Will you tell me," I asked, "how you are exercising foresight now?"

"Well," he replied, "every long-headed business man is not only doing everything he can to help in winning the war, but he is figuring upon after-the-war conditions and opportunities. Great Britain has no fewer than thirty-seven organizations getting ready to cope with after-the-war problems of every conceivable kind. Every nation in Europe is getting ready. We are the only nation that is lagging. We are doing practically nothing yet."

"Our own company, for one thing, is spending several hundreds of thousands of dollars in building new docks and other shipping facilities at one port alone in the Orient. We are also making extensive preparations at other Far Eastern points. Some of these facilities may not be actually needed for years, and they strike certain people as foolish, as a waste of money. True, the half-mile of docks we are constructing at one place may seem unnecessary at this stage of world development; but we are laying broad foundations for the future. We know they will be needed; as a national asset, we know they will become immensely valuable, for a correct reading of the history of the human race enables us to see what is coming. Always the nation that has the greatest fleet of ships has commanded first place in the world. And always the centre of commerce moves westward. It is destined next to pass to the Pacific. America will have the greatest number of merchant ships ever possessed by any nation. Trade must be found for them. The greatest field in the whole world for commercial development in China, with its population equaling one-third of the world's total inhabitants. The nations on the Pacific, notably America, China and Japan, are to become leading nations hereafter. That is why our company is laying plans for expansion at both sides of the Pacific."

The Foresight of the British

"Years ago the American Government possessed a large concession site in Shanghai; but it did not have enough far-seeing business gumption to hold on to it, and two years ago had to pay three hundred thousand dollars for what they formerly had for nothing. The British looked ahead, and retained a beautiful site of fifty acres for their consulate right in the heart of this growing commercial city. This is an illustration of foresight."

"The young man in any walk of life shouldn't find it hard to cultivate the forward-looking habit. I don't see how he can avoid developing it if he enjoys his work and concentrates his mind on it."

"Hindsight, properly utilized, promotes foresight; that is, a careful study of past causes and effects is likely to throw at least some light on future possibilities and probabilities. But before deciding on action, fortify and enlighten yourself with all procurable facts, and post yourself on probabilities, trends, undercurrents, et cetera. Be sure your facts are facts. Having got them straight—and all you can get of them—and having surveyed the whole outlook as discerningly as you can, then decide and act."

"And when you act, act wholeheartedly. Don't be timid. Don't tread gingerly. Have confidence; have self-reliance; have courage; have nerve; have faith. Don't let obstacles or hardships worry you—a goodly share of difficulties and hardships have the same effect upon the right kind of young man as blows have upon a piece of steel that is being tempered. Setbacks train you to fight better. The 'Black Friday' panic of 1873 bankrupted me just after I had made my first start in business, when twenty-eight, and I will recall an older man then saying to me, by way of consolation, 'Happy and lucky is the man who fails when he is young.' I can better appreciate the wisdom of his words to-day than I did then. Age and experience, you know, teach one many homely lessons."

Born in Scotland in 1844, Dollar was reared in a humble abode above the office of a lumber yard where his father worked; but his mother's death set his father to drinking; unemployment followed; Robert was taken from school at twelve and put to work in a machine shop at sixty cents a week, and emigration to Quebec was decided upon when the lad was fourteen. After filling various rough jobs, the young, hard-up immigrant was engaged as "chore boy" for a lumber camp in uncivilized territory a hundred or more miles above Ottawa. His chief duties were assisting the cook, and when the food was not up to the mark—which was often!—the uncouth lumberjacks not infrequently revenged themselves upon the helpless cook boy. He was made cook two years later.

How He Started His Education

The semi-savage life of the lumber camp had almost completely rubbed off the superficial schooling he had received in Scotland; but the conviction overtook him, when he was nineteen, that if he was to make headway in the world he must start educating himself. One day after finishing his work he was practicing how to write and figure on a piece of birch bark—the only writing "paper" he could obtain—

when in popped the manager and the treasurer of the company. "What are you up to? Is that all you've got to do?" they asked as he tried to conceal his writing materials. On inspecting the cook-house and finding everything shipshape, they questioned him less gruffly, and then left. His industry was rewarded by promotion the following year to the position of clerk to the foreman, although the clerking had all to be done nightly after a full day's lumbering.

This life, which he continued for years, latterly as a foreman, taught him resourcefulness, self-reliance, doggedness, frugality. As foreman of a large camp he had to set broken legs, pull teeth, stitch and dress bad cuts, prescribe for the sick and cure "night blind," a malady which struck victims stone-blind nightly from sunset to sunrise, and which was caused by a constant, unvaried diet, month after month, of salt pork, flour and peas—nothing else. (The favorite cure was to eat a piece of cheese or drink milk for five or six days, when such medicines could, by hook or crook, be procured.) He had to know how to keep under control a gang of none-too-gentle huskies; how to build new waterways and make untried rivers navigable for logs—he was the first to bring logs over the Chaudiere Falls and past the city of Ottawa; how to sleep when necessary on frozen ground without freezing to death; how, in short, to live a Robinson Crusoe life in wild, inhospitable, remote regions.

When He Operated in North Ontario

All this time he read and studied, taking with him each year a library of standard works. Also, he saved almost every penny he earned, and was owner, jointly with his brother, of an unmortgaged farm before his wages had risen above twenty-six dollars a month.

This stern training fitted him to seize opportunity. Opportunity came to him—or, rather, he went after it—in the form of new territory which the Canadian Government opened north of Toronto. He had capital enough to form a partnership to purchase timber on virgin farms. They cut thousands of logs, borrowed money to carry them until the following summer in the hope of securing big prices, branched out bravely, had rapidly growing visions of clearing up a modest fortune, when—crash! Jay Gould and other gladiatorial speculators were caught in the notorious gambling frenzy which exploded when gold fell with a sensational bang on "Black Friday," as it ever after was called. Financial wreckage strewn the United States and Canada. Robert Dollar lost his all, and found debts of twenty-five hundred dollars hanging round his neck.

While struggling as a wage-earner to repay his creditors, a struggle which took three years, he married, "And from this time," he says, "my success in life began, as I was fortunate in getting a good helpmate who counseled me, spurred me, tended me, and aided me." Before long he had started eight camps in the Muskoka district. But this did not satisfy his ambition or his pioneering instincts. He invaded an island in the Georgian Bay, near Parry Sound, where giant logs were obtainable. This camp was accessible only in the summer months, as the whole zone was frozen over all through a long winter. The camp ran short of fodder, and Captain Dollar personally undertook to convey supplies over sixty miles of treacherous ice.

"We started off over the ice," he says, "with four teams of horses and four loads of feed. We soon came upon wide cracks which we had to bridge over with planks which we had taken the precaution to carry with us. Before night a terrific snowstorm and hurricane came without handclap of warning. It was so violent that one team was swept off its feet. We formed a hollow square with the loads, and men and horses huddled together in the center. But nobody believed we could survive the night in this exposed place. My chart showed we were far out of sight of land, but indicated a small island or rock about a mile directly to windward, and, armed with an ax, I started to find it, in the hope that we could obtain some degree of shelter."

Clothes Frozen as Stiff as Iron.

"Before I had gone a quarter of a mile I was driven back by the wind. But I couldn't find the teams in the blinding storm. As it was impossible to stand still, I lay down and yelled with all my might on the chance that the men might hear me. I began to choke. Rising, I was driven along at the mercy of the wind—which had shifted, thus mystifying me. One moment I would be spinning and falling over slippery ice, the next I would be floundering in water. The bones of my hand were broken by the ax handle; my clothes began to freeze as stiff as iron; I fell repeatedly, and knew my strength was giving out. One particularly vicious gust knocked me over, and my head hit the ice so hard that I was stunned."

"Snow driven against my face revived me. But I felt I was doomed and that I might as well curl up and die. Soon, however, I felt a little rested, and I determined to try once more. Raising myself on my elbow, I saw with astonishment and delight land not fifty feet from me. It was barren, inhospitable and uninhabited, but it seemed Paradise to me. I survived the night, which was away below zero—and so had the men, by using a load of hay to keep a fire going."

"But all our provisions were lost, except bran mash without salt."

The men refused to proceed farther; but somehow I managed to persuade them to persevere—they knew they could not find their way back without me. After other adventures we at last found the camp. By this time the ice showed signs of breaking up, so I ordered the men to return at once with the teams before it should be too late. They point-blank refused to go without an Indian guide. I was ill and sore all over, scarce able to move a muscle. But to avert disaster, I consented to have them get me out of bed and into a sled. On the return journey nothing more serious happened than the horses falling through the ice into the water several times. Of course it took me several months to get over the effects of my experiences."

Fortune could not long refuse to smile on a man with such grit, with such qualities of leadership, with such heroic determination, with such enterprise. His business grew, he looked further afield. Why not export lumber to Britain? To send consignments all the way from Western Canada across the ocean was a task then beset with difficulties. But he would blaze the trail.

Bought Timber Lands at \$1.25 Per Acre.

So rapidly did his operations extend that he foresaw he must move to a center where there could be harvested a wealth of giant trees suitable for export trade. After journeying to various districts and examining prospects with his own eyes, he bought large tracts of Government lands in Michigan at \$1.25 an acre, and was soon despatching a lumber-laden ship every month to England as well as supplying American with millions of feet of lumber a year, which was manufactured at the new mills at Dollarville, Michigan.

At forty, the immigrant who at eighteen could neither write nor figure with facility, had become a lumber king! But he sat on no gilded throne of ease. From his unbroken diary, which he has kept for fifty years, we learn that in one year, 1887, he travelled 31,141 miles—29,100 by water, 1,050 by rail and 991 by horses, or more than enough to circle the earth. In addition, he covered hundreds of miles on foot, often through forests—lumber men have told me that Captain Dollar, even at seventy, could walk most lumberjacks off their feet.

"I began to survey the world's potentialities," said Captain Dollar, speaking of this stage of his career, "and, looking to the future, I analyzed that the vastest undeveloped market for lumber was the Orient, particularly China. Before making a final decision I went twice to China and looked over the whole ground.

"How could this trade best be handled?" I next asked myself. I was inland. Moreover, Michigan's supplies of big lumber were nearing exhaustion. Clearly, San Francisco was the natural, the ideal location; besides, California had rich supplies of redwood. So I moved there in the late eighties. We found by and by that it was easier to get lumber, and to get customers, than it was to get vessels.

The Famous Dollar Line of Steamships.

"I investigated. I discovered that ships were making abnormal profits at the high freight rates charged. There was obviously only one thing to do—acquire ships. My first ship paid for itself within the first year. We did not merely carry over to China and Japan our own cargoes of lumber, but industriously sought return freight, going after it wherever it was to be found, and making three-legged voyages, if necessary, to insure full ships homeward.

"The creation of commerce between The States and the Far East then became one of my major aims. I visited China eighteen times and made it my business to form as many friendly connections as possible between the two nations. We found both the Chinese and the Japanese most dependable people to do business with—in fact, we have never been swindled out of a single cent in all our dealings with these peoples, a thing I wish I could say about our own and other white nationalities. Of course the most exacting care had to be taken on our part to live up to the very letter—to every dot of an 'i' and stroke of a 't'—of all our agreements."

A Pacific lumber man once told me, in this connection, that oftener than once Captain Dollar has gone aboard one of his ships loading lumber for the Orient and, on finding that the lumber did not exactly tally with the order, has ordered every stick of it unloaded. To protests that the lumber was distinctly better than contracted for, he would reply: "When the Chinaman orders a certain thing, he expects to get that identical thing, and nothing else. He is entitled to get what he wants. Give it to him—and never depart from this rule."

"Do no business on Sunday, or in the evening at home. It was decreed in the Book of Wisdom, 'Six days shalt thou labor and do all thy work.' Man is not meant, he is not constituted, to work seven days a week. Work up to the limit for six days, but not a stroke on the seventh. It won't go. It doesn't pay. Relax completely every Sunday. Then you can and will tackle your job on Monday morning full of new vim. You will feel eager and fit. By the way, I always read a passage from the Bible every morning and, among other things, attribute much of my success to the teaching derived from this reading.

"Let no young man seek a soft snap. Glass cases develop frail

plants. Avoid the easy, lazy job. Shun the position that calls for little or no exertion, that does not keep you constantly on tiptoe in an effort to fill it well—better, in fact, than it was filled before. Don't run away from difficulties, from hard work, from hard knocks, if need be. Hammering hardens and strengthens a young man. It tests his mettle. It develops him. It teaches him self-reliance, self-confidence, grit. It drums out cowardice or timidity, and makes him unafraid to stand up and fight until he learns how to win out.

"By 'real job' I don't mean a big, responsible position. It was a real 'job' felling trees and floating logs down difficult rivers and

"Avoid the easy, lazy job. Shun the position that calls for little or no exertion, that does not put your powers to the test, that does not keep you constantly on tiptoe in an effort to fit it well—better, in fact, than it was ever filled before. Don't run away from difficulties, from hard work, from hard knocks, if need be. Hammering hardens and strengthens a young man. It tests his mettle. It develops him. It teaches him self-reliance, self-confidence, grit. It drums out cowardice or timidity, and makes him unafraid to stand up and fight until he learns how to win out."—Captain Robert Dollar.

over rapids—I more than once almost lost my life and once had three of my men drown right in front of my eyes. The truth is that most jobs can be made 'real jobs' if they are filled by a real fellow, who wants to put all he can into it, not merely to get all he can out of it.

"The growth in this country's business has been so much greater than the growth in population that there are, relatively, a greater number of big jobs to fill than there used to be. To-day the only way to get men is to make them."

Pembroke's Lumberman Mayor Gets Second Term

W. R. Beatty, Pembroke, Ont.,
Re-elected Mayor for 1919

W. R. Beatty, secretary-treasurer of the Colonial Lumber Company, Ltd., Pembroke, Ont., was re-elected mayor of that progressive town for another term, at the recent nominations. This makes the second year that Mayor Beatty has been appointed to the highest position in the gift of the ratepayers and each time so implicit was the confidence in him that he was chosen by acclamation. He entered the town council in 1914 and in 1917 was elected reeve. He has always possessed public spirit and believes in devoting a share of his time and talent to the interest and welfare of the community. His Worship has been for three or four years one of the governors of the Cottage Hospital Board, served on different committees and taken a deep concern in local patriotic fund work

and in Board of Trade affairs. Mayor Beatty is a native son of Pembroke, where he was born in 1882. He left school in 1900 and started out by obtaining a position as junior clerk in the office of A. & P. White, lumber manufacturers. Five years later this concern sold out to a syndicate and formed the Colonial Lumber Company, Ltd. Mr. Beatty has been engaged with this organization ever since its inception, first holding a clerical position and in 1910 being appointed secretary-treasurer of the company. He is also a director of the Petawawa Lumber Company, Ltd., and of the Canada Lumber Company, Ltd., of Toronto and Weston, and managing director of the Pembroke Transportation Co., Ltd.

Captain Edward Oric Perley died in Fredericton a few days ago. He was formerly in command of tugboats employed by Glaziers and the St. John Log Driving Company. He was sixty-three years of age.

A report from Augusta, Me., says that there will probably be no logs of the Kennebec drive manufactured below Augusta during the coming season, for the first time in the history of the lumber business on the lower Kennebec.

They Handle Wood Products and Make Laws

The Men Who Are Rendering Public Service in the Upper Chamber—An Outline of Their Activities in Political and Lumbering Arena of Dominion

There are several lumbermen legislators in the Senate of Canada—men, who have had life-time identification with the lumber and timber industry, and have also fought many a strenuous political battles. Prior to their elevation to the Upper House they were accustomed to giving and receiving hard party blows, but in the more peaceful and permanent sphere of public service—the Red Chamber—they are not as frequently heard as in days of yore on the hustings during election campaigns, or in nominating conventions. They are, nevertheless, doing their bit in a legislative and administrative capacity and their power and influence is manifested in the direction of national affairs. The weight of their counsel and ripened judgment in deliberations on leading issues and outstanding problems is still felt, even if their utterances and attitudes on certain questions do not command as large a share of public attention as those who occupy seats in the House of Commons.

To use a colloquial expression, the Senate is perhaps not as much "in the spotlight" as the Commons, but in spite of criticism aimed spasmodically at the former, that body continues to do useful and effective work. Many progressive measures have emanated from within its walls. Unmindful of the knocks received at the hands of both political parties every now and then, the Upper House has been steadily doing business since Confederation. There is no reason to suppose that it will not be as active and watchful of the public interest and national welfare for another half century, as it has been in the past.

The "Canada Lumberman" is publishing group portraits of the lumbermen legislators of the Dominion from Coast to Coast. This makes the third installment of the series, which has aroused much interest. The portraits of members of the Senate who are connected with the timber and lumber industry of Canada are shown on another page, and a brief outline of the political and business career of each honorable gentleman will prove both timely and instructive. The group pictures of the lumbermen members of the House of Commons and the remaining provinces of the Dominion will appear in subsequent editions. The lumbermen legislators of Ontario and also of the Maritime Provinces were featured in recent issues of this paper.

Hon. Joseph Bolduc, Speaker of the Senate, is a seasoned political warrior, representing Beauce, P.Q., in the House of Commons, from 1876 to 1884, when he was summoned to the Senate. He ran a remarkable election in 1882 against Sir Francois Lemieux, as in that fight, in his own parish and in the two adjoining parishes, only two electors registered their votes against him. Hon. Mr. Bolduc has been the presiding officer of the Upper House since June, 1916, and is a representative, broad-minded French Canadian, who has always been favorable to the Bonne Entente between the different nationalities of Canada. He is a former mayor of his parish, a former warden of the county of Beauce, as well as a school trustee and a member of other local bodies,—agriculture, telephone and railway. Senator Bolduc is a lumber merchant, a farmer and a notary by profession, and resides in St. Victor de Tring, Que. In politics he is a Conservative.

Hon. Nathaniel Curry has had an extended and outstanding business career. He resides the major portion of the time at 581 Sherbrooke St., Montreal, while his country residence is at Tidnish, N.S. He has been a member of the Senate for the last six years. The activities of Hon. Mr. Curry are numerous and varied, and he has always taken a deep interest in educational, religious, charitable, athletic and other pursuits. He is president of Rhodes, Curry Co. Ltd., Canadian Car & Foundry Co., and several other companies, holding the position of presiding officer in no less than twelve organizations and being a director of thirty. Naturally he is a very busy man. He has been intimately associated with the lumber business all his life and consumes a vast amount of wood products in connection with the operations of the progressive concerns which he has the honor to direct. Senator Curry was born in King's County, N.S., in 1851, and previous to establishing the large enterprises in Amherst, N.S., which have flourished under his direction, he spent some years with railway and mining companies in the United States. He is a past president of the Canadian Manufacturers Association and a Conservative in politics.

Hon. James J. Donnelly, previous to stepping in the larger sphere of political activity, was reeve of Greenock Township for two years, and a member of the Bruce County Council for four years, being warden of the county in 1902. Senator Donnelly is both a lumberman and a farmer, and has been a member of the Upper House for the past six years. He sat in the House of Commons for several years as a member for South Bruce. Senator Donnelly, who is a Conservative, resides in Pinkerton, Ont., and was summoned to the Senate in 1913.

Hon. W. C. Edwards, of Ottawa, needs no extended reference to his busy and aggressive career. He is a national figure in the lumber arena, having been associated with the industry for over fifty years and great plants have been built up at Rockland, Ont., and the junction of the Rideau and Ottawa rivers in the Capital city of Canada. Senator Edwards founded the business which bears his name, away back in 1868, and the golden jubilee of the mill at Rockland was celebrated last fall. Senator Edwards takes a deep interest in many lines of activity and usefulness outside of the lumber business. Agriculture, stock raising, power development, cement, banking and other interests claim a large share of his time and attention. The Senator is now in his 75th year, but is as alert and vigilant as many men at half his age. He was summoned to the Senate sixteen years ago, and previous to that, sat in the House of Commons as the Liberal representative for Russell County, being returned at the general elections of 1891, 1896 and 1900.

Hon. George Gordon is a big figure in the lumber arena and a former president of the Canadian Lumbermen's Association. He commenced his career as a clerk and culler for Booth and Gordon, lumber dealers of Kippawa and began business for himself in 1900. He is president of Geo. Gordon & Co. Ltd., Cache Bay, a director of the Strong Lumber Company, Cache Bay, the Bartlett Lumber Company, Sheldrake, Mich., president of the Expanse Lumber Company, North Bay, and a director of the Young Lumber Company Ltd., North Bay, the Abitibi Power & Paper Company, as well as other organizations, including the Petawawa Lumber Company, Pembroke. Senator Gordon first entered the House of Commons by being elected for Nipissing county in the Conservative interests in 1908. He sat in that body until 1912, when he was made a senator. Senator Gordon resides at North Bay and is a frequent visitor to Toronto, Montreal and other points by reason of his large business connection.

Hon. George G. King is a veteran lumberman and parliamentarian, being now in his 83rd year. He is head of the King Lumber Company Ltd., of Chipman, N.B., and has a son, G. Herbert King, who occupies a seat in the New Brunswick Legislative Assembly. Senator King was warden of Queen's County in 1877 and the following year was elected to the House of Commons, where he sat until 1886. He was then out of public life for one term, but came back in 1891 and was also returned in 1896. He was elevated to the Senate in December of that year, and is active and alert for a man of his advanced years. He is a great traveller and spent the larger part of last summer in the West, going as far north as Skagway, Alaska. Senator King is a Liberal.

Hon. Alexander McCall resides at Simcoe, Ont., and is a well-known lumber merchant of United Empire Loyalist extraction. His first entry to public life was in 1908 when he was returned as the Conservative member for Norfolk County. Five years later he was created a senator. Hon. Mr. McCall comes of a historic family, his great grandfather, Donald McCall, being a Highland soldier who was engaged in the capture of Quebec, under Wolfe, and also fought on the King's side in the American Revolutionary war. The family settled on the Lake Erie shore in the County of Norfolk, in 1794, where the subject of this reference was born.

Hon. Peter McLaren is one of the first citizens of the historic town of Perth, the county seat of Lanark. There he has resided all his life and taken much pride and interest in the development of the substantial "Stone Town." For 28 years Hon. Mr. McLaren has been a member of the Canadian Senate. He is interested in timber limits and holds large areas of wooded and iron lands in Virginia. He also

Lumbermen Legislators in Canadian Senate

Hon. Valentine Ratz,
New Hamburg, Ont.

Hon. Jos. Bolduc,
Speaker of the Senate.

Hon. Nathaniel Curry,
Amherst, N.S.

Hon. Jas. J. Donnelly,
Pinkerton, Ont.

Hon. W. C. Edwards,
Ottawa, Ont.

Hon. Geo. Gordon,
North Bay, Ont.

Hon. Alex. McCall,
Simcoe, Ont.

Hon. Peter McLaren,
Perth, Ont.

Hon. Geo. G. King,
Chipman, N.B.

Hon. F. P. Thompson,
Fredericton, N.B.

Hon. Irving R. Todd,
Milltown, N.B.

has extensive lumbering and timbering interests in Western Canada. Senator McLaren's home is one of the most hospitable and attractive in Perth, which place is noted for its many solid, well built residences.

Hon. Wm. Mitchell, who resides in Drummondville, P.Q., has been interested in the lumber business for many years. He is President of the Drummond Lumber Co., and also has large outside affairs, being general manager and director of the Drummond County Railway, president of the Drummondville Bridge Co. and a director of Richmond, Drummond and Yamaska Fire Insurance Company. Senator Mitchell is a Liberal and has been an occupant of a seat in the Upper House for fifteen years. Of Irish extraction he was born in the township of Durham in 1851. He is a successful business man and has always evinced much interest in education, serving as chairman of the Protestant Board of School Commissioners.

Hon. Valentine Ratz, who resides in New Hamburg, is still interested in timber limits to a large extent, but is out of the manufacturing line at the present time. Mr. Ratz is president of the South River Lumber Company, and was first elected to the House of Commons in 1896. He was defeated at the general election four years later, but came back strong in 1904, and was summoned to the Senate ten years ago. Hon. Mr. Ratz was born in St. Jacobs, Waterloo County, in 1848. He has been ill ever since last April, but his many friends will be glad to learn that he is improving. The Senator is a Liberal in politics and a Methodist in religion.

Hon. F. P. Thompson, who hails from Fredericton, N.B., is interested in the lumbering and milling business and has had an industrious career. He was a member of the York Council for six years and warden for three years. Thirty-one years ago he was elected to the Provincial Legislature, where he sat until 1885, when he was appointed to the Legislative Council, from which body he resigned in 1891 to contest York County for the House of Commons in the Liberal interests. He was again elected to the Provincial Legislature in 1899, of which body he was a member until summoned to the Senate in 1902. Senator Thompson is president of the McFarlane-Neill Mfg. Company, managing director of the N. B. Telephone Company, and interested in a number of other important concerns.

Hon. Irving R. Todd, who was made a senator in March, 1918, is still interested in timber limits. He spent several years in the lumber business, from which he retired after a successful career. He was born in 1861 in Milltown, N.B., and has always been a broad-minded, progressive man. At the time of his selection as a member of the Upper House it was distinctly stated in the press of his native province that his appointment was based on merit, service and public spirit, rather than on party affiliation or political influences. Hon. Mr. Todd has already created a good impression in legislative circles at Ottawa.

Ocean Freight Rates Are Being Reduced

Ocean freight rates have been reduced on commercial traffic, and the British Government is releasing a certain amount of space for commercial cargoes. These two facts are the first indications of a return to normal in transatlantic shipping.

Rates all round show a considerable reduction, and the indications are that by the time the season opens again in the port of Montreal, freight rates will have been materially declined. Three months ago the rate on general cargo was \$6.50 per 100 pounds. After two months at this rate it was reduced to \$4.75 per 100 pounds, and recently there was a further reduction, and it now stands at \$1.50 per 100 pounds.

Shipping men state that there was no embargo on commercial traffic, and that the reported embargo only concerned the Government shipments on exports and imports, and in no way affects the regular commercial business of the country. The Government authorities have placed many temporary embargoes such as this upon exports and imports in order to clean house themselves before sending any more goods forward.

Will Saw Fifteen Million Feet This Season

That the Victoria Mills, Fredericton, N. B., will be operated at full capacity during the entire 1919 season was the statement made by Mr. Donald Fraser, of Plaster Rock, one of the principals of Fraser Limited, owners of the big milling property and other extensive lumber properties throughout Eastern Canada. Mr. Fraser stated that the owners were arranging for the necessary supply of logs to keep the Victoria Mills in operation throughout the whole season, as at least 15 million feet would be available. The figures for the 1918 output of the local mills were not as yet complete, he said, but would probably be about the same quantity as mentioned for 1919 manufacture.

Lumbering conditions on the Tobique were not unfavorable at the present time, Mr. Fraser said, there being between 15 inches and two feet of snow, while there was plenty of snow in the Quebec woods, too, so that the company will be able to get out about their usual cut of logs this winter, and this they will probably do, as the labor situation has already commenced to ease off and many men who were employed on munitions are now going back to their former employment.

It is understood that a considerable quantity of lumber which the Fraser Company now have manufactured and which is piled in their yards in Fredericton, as well as elsewhere is already sold and this same situation is said to refer equally to the 200 million feet or more now piled on the North Shore.

Some shipments of lumber to foreign markets are now being made from New Brunswick, including Great Britain, Europe, South America and some to South Africa, but charters remain very high, recent quotations from South American ports being from \$60 up to almost \$70 per thousand.

Number of Accidents Show Big Increase

In the fourth year of the operation of the Ontario Workmen's Compensation Act, just closed, the number of accidents and the amount of compensation awarded considerably exceeded the figures for the previous year. The number of accidents reported during 1918 was 47,848. The amount of compensation awarded was \$3,514,648.47. The number of accidents reported during 1917 was 36,514. The amount of compensation awarded was \$2,913,085.81. Of the total of 47,848 accidents, 440 were fatal.

A notable feature of the accident calendar for 1918 was the exceptionally large number of railway accidents during the early part of the year, largely owing to the very severe winter weather.

A large part of the increase in the amount of compensation is accounted for by the increased wages, the general principle of the act being that the workman receives 55 per cent. of lost wages.

Turkish Bath for Canadian Railway Ties

How to lessen the drain on Canadian forests by using scientific means to preserve railway ties was the subject of an address delivered before the Canadian Railway Club, in Montreal, by Mr. H. E. Wicksteed, Assistant Engineer of the Canadian Northern Railway, Toronto.

The main point brought out by Mr. Wicksteed was the growing scarcity of good timber for railway ties, and the necessity of finding some means whereby less valuable woods could be utilized for this purpose. The system he advocated was "a species of Turkish bath," which opened the pores of the wood, and then a thorough drying, which left the wood practically clear of all material that might lead to decay. Timber so treated, he believed, was practically indestructible, save by fire, and as a waterproofing a heavy oil bath had been found to answer perfectly. The dried-out ties were simply dipped in the oil bath, and then given a dose of a sand blast to make them easy to handle. The results of this treatment, he said, had been found very good with Canadian Northern, to such extent that woods ordinarily considered unfit for ties had been utilized with valuable effect, lasting for years.

To what extent this would save the forests Mr. Wicksteed showed when he stated that the Canadian Northern alone needed more than four million ties a year, while the ordinary life of a tie was only six years. The total needs of the Canadian railways he figured at 15,000,000 ties a year, a drain which the Canadian forests could not stand for any length of time.

Sudden Death of Adair Lockman

Adair Lockman, vice president of the Germain Co., lumber, timber and ties, Pittsburgh, Pa., passed away recently after only one week's illness from influenza and pneumonia. He was thirty-four years of age and was born in Houston, Texas. After completing his education he entered the Kirby Lumber organization and was later sales manager of the Thompson-Tucker Lumber Co. and also for the American Lumber Co. at Merryville, La. He became associated with the Germain Co. in 1913, as sales manager, and for the last two years had been vice-president. During 1917 and part of 1918, Mr. Lockman was in charge of western sales in the Chicago office and enjoyed the confidence and esteem of the trade. He leaves a wife and one daughter, besides his parents residing in Houston, Texas, and other relatives.

The Canada, first of the wooden 1,500-ton steamers being built in British Columbia for the French Government, was launched from Lyal Shipyards, Vancouver, B. C. Twenty of the ships are being built in Vancouver and twenty at Victoria.

New mill of the Timberland Co., Ltd., looking north across Fraser River, with City of New Westminster in background

New Timber Mill Erected in Record Time

Plant of Timberland Lumber Co. Now Operating On Fraser River Possesses Splendid Location and Every Modern Manufacturing Facility

Erected and fully equipped in less than six months, the new sawmill of The Timberland Lumber Co., Ltd., on South Westminster waterfront, was started December 23. It is now being pointed to with pride by every citizen of the Royal City as the latest notable addition to their expanding industries, the total investment in plant land and timber limits being over the million mark. The site comprises 65 acres with 2,000 feet of water frontage, and 32 acres of foreshore rights for booming grounds—approximately 100 acres in all.

The main building is of very heavy type of construction, the dimensions being 52 x 280 feet, two storeys, the upper being the saw floor. The mill has been specially designed and equipped to handle heavy dimension and timbers up to 100 feet in length with speed and economy of operation, and has a capacity of 100,000 feet in ten hours. The planing mill has adequate facilities for dressing heavy timbers and smaller stock, while the size of the timber dock, 100 x 350 feet, is a guarantee that there will be no congestion of material at any time, no matter how hard the mill may be driven when cutting "rush" orders. The power plant consists of a battery of 72 in. x 18 ft. boilers supplying steam to powerful engines separately operating the front and rear ends of the mill.

Shipping arrangements made through the British Columbia Electric Railway Company give Coast rates and direct connections with five trans-continental railways — Canadian Pacific, Canadian Northern, Great Northern, Northern Pacific and Chicago, Milwaukee & St. Paul. It cost the mill company a lot of money in the way of trackage, two miles of heavy steel having to be laid from the main line of the B.C.E.R. The trackage is arranged so that it affords exceptional facilities for the quick handling of shipments. A good wagon road parallels the railway line. The mill was erected under the direction of Louis Livingston, of Winlock, Wash., a builder

well known on the Pacific Coast. His work throughout has been extremely satisfactory to the company, and creates a time record for construction of a plant of this size. Commenced on June 25 last, the mill was in shape to run Dec. 23. A number of neat cottages to house the workmen have also been constructed. They are so located as not to interfere with the company's plans for future expansion, which cover the erection of another sawmill and large box factory.

Has Large Area of Noble Timber

The timber supply will be brought from Vancouver Island, where the company last year acquired several thousand acres of very choice limits now being opened up by their logging superintendent, D. E. Stewart. His task includes the construction of several miles of standard gauge logging railway, which he hopes to make the best stretch of logging road in the province. The steel is 60-lb. and heavier, and rails of similar weight will be used for track extensions. The rolling equipment will comprise a 70-ton Climax loco., standard logging cars; fitted with air brake, and a considerable number of heavy disconnected trucks to be used in taking out long timber sticks. The railway is so built that timber up to 135 feet in length can be handled with ease. Deliveries to the mill will start in February and in the meantime booms will be purchased in the open market.

J. G. Robson, president and managing director of the Timberland Lumber Co., Ltd., and Paul E. Murphy, general superintendent and assistant manager, naturally feel considerably relieved now that their new mill has reached the operating stage. The company's sawmill at Craig Station, Fraser Valley, cutting 50,000 feet daily, had cleaned up the adjacent supply of timber on Dec. 12, after a steady run of eight years, so that only a few days elapsed between the closing of the old plant and the starting of operations at the new one. The former is now being dismantled preparatory to the sale of the equipment.

President Robson informed the "Canada Lumberman" representative that he does not propose to manufacture finish lumber at the new plant. The company will specialize in heavy dimension and timbers, the side lumber being moved in the form of boards, ship-lap and small yard stock. The management feel confident the trade will realize that in this way a higher grade will be supplied for general construction work than would be possible if the clears were being saved for finish purposes. It will be the aim of the company to build up a very high reputation for the new mill on the line of quality and service.

We are fortunate when we consider the quality of our trade papers. There is not a number that is issued which would not be cheap from an educational standpoint at the cost of an ordinary book. Questions are discussed by experts on different lines, men who make a careful analysis and study of the subjects; thus may be obtained knowledge in general of the lumber business, inspection and grading rules, peculiarities or characteristics of the different kinds of lumber, purposes for which the kinds are suitable, salesmanship, accounting (particularly opinions as to cost systems, etc.); in fact, all lines are discussed ably and pointedly.

View looking downstream showing part of the Timberland Lumber Company's fine booming ground

Personal Paragraphs of Interest

Alfred Read, of Read Bros., Ltd., Toronto, is now on an extended business trip to the Pacific Coast.

J. I. Bennett, of the Bennett Lumber Co., Ltd., Montreal, wholesale and export lumber dealers, is on a business trip to England.

A. E. Clark, of Toronto, was in Chicago recently attending a board meeting of the National Hardwood Lumber Association, of which organization he is a director.

Clark Allen, of Terry & Gordon, Toronto, has been elected president for the coming year, of the Toronto Triple Link Club, I.O.O.F., in the work of which he has always taken a deep interest.

Gordon C. Edwards, of Ottawa, and W. Gerard Power, of St. Pacome, Que., were in New York recently attending a meeting of the Board of Trustees of the National Wholesale Lumber Association.

Stewart F. Rutherford, of William Rutherford & Sons, Co., Ltd., Montreal, has been elected an alderman for the city of Westmount, heading the poll.

T. Z. Pariseau, of Pariseau Freres, Ltd., box makers and lumber merchants, has been elected an alderman of the city of Outremount, Province of Quebec.

C. I. Adcox, who for several years has been salesmanager of the Canadian Western Lumber Company, Fraser Mills, B. C., has taken a similar position with the Reynolds Timber & Trading Company, Vancouver, and has entered upon his new duties.

George Petry, who was formerly associated with J. P. Johnson and Son, has taken a position as assistant to R. G. Chesbro of Toronto, who represents the Allen-Stoltz Lumber Company, of Vancouver, and the Prince Rupert Lumber Company, of Prince Rupert.

J. B. Knox, of Knox Bros., Ltd., Montreal, is paying a visit to the leading mills in B. C. J. M. McNeil, of the Toronto office of the firm, is in Montreal for some time while T. M. Lewis, of Toronto, is looking after their interests in Ontario.

Coolidge & Carlisle, forest engineers, Bangor, Maine, are now in partnership and are widely known to the timber interests of the east. At present Mr. Coolidge is in Newfoundland, where he is engaged in some important work. The firm of Coolidge & Carlisle make a specialty of furnishing timber estimates and maps and also plans for logging operations.

E. F. Foster, late of Michigan, has been appointed manager for the Holt Timber Company, at Bolger Bridge, Ont. Mr. Foster has been associated with the company for a number of years. He takes the place of Geo. W. Taylor, who has gone to Florida to discharge important duties in connection with other large enterprises with which Mr. Holt is associated.

The death occurred recently of Archibald McEachren, of Millerton, N.B., who was outside manager for the Miramichi Lumber Co. He was in the woods in the interests of his concern when stricken with influenza, and was brought home, but died three days later. Mr. McEachren was well known and well thought of and his passing caused wide regret in eastern lumbering circles.

W. Gerard Power, St. Pacome, P. Q., president of the Canadian Lumbermen's Association, spent a few days in Toronto recently on business connected with the 1919 convention in St. John, N. B. Mr. Power, who was accompanied by his wife, expects the gathering on February 5th and 6th to be the most representative ever held in the history of the Association.

At the annual meeting of the Toronto Board of Trade the elections for members of the Council for the coming year aroused much interest. C. W. Wilkinson, vice-president of the Union Lumber Company, who was nominated by the Lumbermen's Section of the Board of Trade for a seat in the Council, was one of those who were successful. He succeeds J. L. Campbell. John B. Reid, who was nominated as a representative on the Canadian National Exhibition from the Lumbermen's Section, was defeated. Mr. Reid, who has served for a number of years on the Exhibition Board, rendered faithful service.

L. B. Beale, Lumber Commissioner of B. C., to the British Isles, has been appointed British Trade Commissioner in Western Canada. He will have the territory from Winnipeg to the Pacific Coast under his jurisdiction, and will possibly make his headquarters in Winnipeg. Mr. Beale has been in London for a considerable period and his wide experience and thorough knowledge of the lumber industry well qualify him for the duties of his new post. Mr. Beale will return to Canada in February, and will spend some time in the office of G. T. Milne, H. M. Trade Commissioner, Montreal, and later will visit Toronto, where he will be associated with F. W. Field, H. M. Trade Commissioner, after which he will proceed to Winnipeg.

Details of Big Order Still Uncertain

Will the reported big order of a billion feet of Canadian lumber for the British Government materialize? This is the question which stares the lumber trade of the Dominion in the face, so far as official Ottawa is concerned.

The situation at present, as summed up in a nutshell is: While the Canadian Trade Commission received an inquiry which did not contain sufficient instructions, and knew generally that there was a possibility of Canadian lumber being purchased by the British Government, it had not official, definite instructions.

As near as anyone can describe things at present, since the despatches appeared, the business in Canada is in "statu quo."

Divergent views regarding what has happened have been expressed by responsible persons. One tends toward the effect that a Canadian Government official went to the Timber Controller in England and apparently got some satisfaction that a big order would be given to the Dominion. From what was presumed the British Timber Controller was to distribute the billion feet between nine or ten dealers in the Old Country, giving it out in blocks and asking them to absorb it.

The real fact as the information from the Canadian Trade Commission stands is, that they received an inquiry, which did not contain sufficient information. They cabled back asking for details.

The upshot was that after a week or ten days a reply was received putting the question of supplying bottoms up to Canada. Hon. A. K. MacLean, acting Minister of Marine, took the proposition up with the result that another message to England was sent putting the matter of shipping up to the British Admiralty to deal with.

At the date of writing, says the Ottawa correspondent of the "Canada Lumberman," there were no specifications, no orders given, no allotments, nor did the Canadian Trade Commission in the Capital know definitely what was wanted, or how transportation was to be arranged.

The general view taken by parties interested in the placing of the order is that if the whole business in Canada were placed to-morrow, there would still be many obstacles in the way. Shipping is one of them, sizes, widths, and grades is another, but perhaps most important to certain interests is that the business if it is going to be done, goes through the ordinary channels and trade reverts to pre-war times.

Since the press despatches the Canadian Lumbermen's Association have taken the matter up and have evidenced a great deal of interest. It is their idea that the business should go through the ordinary grade lanes, through established houses, and that preparation for the handling, examining, and grading of the stock to be shipped has to be previously arranged for.

Finally Revised Figures on Lumber Industry

A census of the lumber industry in Canada has just been completed by the Dominion Bureau of Statistics, embracing 2,879 operating concerns, of which 52 were in Alberta, 251 in British Columbia, 29 in Manitoba, 255 in New Brunswick, 462 in Nova Scotia, 603 in Ontario, 60 in Prince Edward Island, 1,151 in Quebec and 16 in Saskatchewan.

The total capital invested in the industry, including land, buildings and plant, machinery and tools, stocks in process and supplies, and working capital is given at \$149,266,019.

The number of employees on salaries was 2,874 males and 285 females, who received a total of \$3,554,097. The average number of employees on wages was 25,516, engaged in logging operations, and 28,820 in the mills, and their combined wages amounted to \$34,412,411.

The aggregate value of production in 1917 was \$115,884,905. The census covered 29 kinds of lumber, 11 of shingles, 10 of lath, 6 of pulpwood and 10 of miscellaneous products, including cooperage stock, veneer, ties, poles, posts, dressed lumber, etc.

The principal kinds of lumber by species of wood used, were spruce, 1,466,558 m. ft., white pine 791,609 m. ft., Douglas fir 706,996 m. ft., hemlock 322,722 m. ft., cedar 149,999 m. ft., red pine 119,321 m. ft., balsam fir 102,373 m. ft., and all other varieties including custom sawn lumber 483,293 m. ft.

The total quantities and values of lumber, lath, shingles and pulpwood cut, and of miscellaneous products were as follows:

Lumber, 4,142,877 m. ft., \$83,655,097; Lath, 616,949 m. ft., \$1,828,018; Shingles, 3,020,956 m. ft., \$8,431,215; Pulpwood, 988,444 cords, \$10,543,630; Miscellaneous products valued at \$11,436,945.

The new Government steamer, Canadian Voyageur, which was completed recently, has sailed from Quebec for Halifax. She will be handed over to the control of the Canadian National Railways at Halifax.

Great Gathering of Ontario Dealers

Annual Meeting of Retail Lumbermen will be Held in Toronto
Tuesday Feb. 11—Important Trade Matters

Everything is now in readiness for the big Retail Lumber Dealers Convention, which will be held in Toronto, at the King Edward Hotel, on Tuesday, February 11th. There will be two sessions for the election of officers, the receiving of reports, and general discussion on the many matters of moment to the retail lumber merchants. The morning session will start at 10 o'clock, and the afternoon at 2 o'clock.

In the evening the visitors will be tendered a banquet at the King Edward Hotel, by the wholesale lumbermen of Toronto, and arrangements are being completed for the success of the dinner.

On Monday, February 10th, there will be a general meeting of the Board of Directors, at the King Edward Hotel, and a full attendance is requested.

It is just a year ago since the Ontario Retail Lumber Dealers Association was instituted and now that body is strong and promising. Much good work has been carried out, but there is a great deal more to engage the attention of the members. The success of the general meeting held in Toronto during the progress of the Canadian National Exhibition, in September last, is still fresh in the minds of those who were fortunate enough to be present. It is expected that the forthcoming occasion, Tuesday, February 11th, will be the greatest get-together assembly of lumber retailers that the province has ever seen. Not only are members of the Association cordially invited, but all dealers will be made welcome. There will be much to interest, instruct and stimulate. Let the first annual conclave be a hummer from beginning to end.

Some of the questions to be considered and dealt with are: Workmen's Compensation Assessment, some shortcomings and suggested amendments; Proposed changes in Mechanics Lien Act, Cost Accounting System, Advertising, Standard plans, etc.

The regular sessions will open, as stated, on Tuesday morning, February 11th, at 9 o'clock, with registration of members. At 10 o'clock President Patterson, of Hamilton, will call the meeting to order and deliver his address. Then will follow the reports of other officers and committees, after which will come the presentation of resolutions, general discussion, new business, election of officers, etc., all of which will provide a busy and important meeting.

The present officers of the Ontario Retail Lumber Dealers Association are: President, Thos. Patterson, Hamilton. Directors: A. G. Rose, Ottawa; E. M. Barrett, Ottawa; W. M. Tupling, Orillia; J. A. Laberge, Sudbury; Howard Hesson, Sault Ste. Marie; A. S. Nicholson, Burlington; K. J. Shirton, Dunnville; J. C. Scofield, Windsor; B. F. Clarke, Glencoe. Secretary-Treasurer, H. Boulton, Toronto.

New Interests Operating in Brockville Plant

The Brockville Lumber Company, Ltd., of Brockville, Ont., which has been in liquidation for several months, with H. W. Going as liquidator, has practically closed up its lumber business and sold the plant, land and buildings to new interests, who have reorganized the concern. They will carry on an up-to-date lumber yard along aggressive lines under the name of the Brockville Lumber Company. John Caruth, who has been with the organization for over 30 years remains with the new owners and will have charge of the yard end, selling and delivery. Miss Grace Joy, formerly secretary-treasurer of the old company remains in charge of the office and financial end. The planing mill to take care of all work for house building and a modern box making shop will look after boxes and shooks.

Mr. MacLaurin Discusses Export Outlook

Alex. MacLaurin, manager of the St. Maurice Pulp & Paper Company, Limited, Three Rivers, Que., in a recent interview, said that the European buyers would have to pay more for their lumber than they did last year. Wages have gone up from \$20 to \$30 a month, and prices must ascend to keep pace with them.

Mr. MacLaurin is of the opinion that there is not a billion feet of lumber in the eastern part of Canada if the order calls for immediate delivery, in which case the market will have to search for the material as far west as the Pacific coast. Even with the Pacific coast market included, it is doubtful if there is a million feet of lumber available for anything like immediate delivery, he said.

"Contrary to popular opinion," Mr. MacLaurin added, "the province of New Brunswick has been almost cleaned out of lumber supplies. There is very little cut lumber in that province awaiting shipment. The province of Quebec is in a similar position. There is no very large amount of lumber on hand. We have about 3,000,000 feet, and a couple of firms in Quebec, I understand, who are not mill

operators, have purchased several cuts, and have a quantity on hand ready for the market.

"Undoubtedly if this order for a billion feet of lumber is confirmed it will be the biggest boon to the lumber industry that Canada has experienced during the last half century, but we lumbermen must get a reasonable price, and in addition to that we must get the labor to get the lumber out.

"For the past few years the annual cut in the province of Quebec as well as in New Brunswick has been steadily decreasing. This is due to the fact that the large sticks are being quickly culled out, and that to-day the lumber operators must cover a much larger area than before in order to obtain sticks of the proper size.

"The cut of the season has been practically completed in the province of Quebec, and from now on hauling will take up the attention of the lumber operators, after which the spring drives will be at hand."

It Is Now The Irvin Lumber Co., Limited

W. C. Irvin, Toronto
Head of the Irvin Lumber Co., Ltd.

Wm. C. Irvin, of Toronto, who was elected chairman of the Lumbermen's Credit Bureau for the coming year at the recent annual meeting, has been a staunch supporter of that organization since its inception. It was largely through his instrumentality and influence that the Builders' Supply Dealers joined forces with the Lumbermen's Credit Bureau a couple of years ago, thus increasing the work and worth of the latter institution, a seat on which will cost \$100.00 after April 1st next in addition to the regular fees.

Mr. Irvin, who has been actively identified with the lumber and sawmill business all his life, is now the head of the Irvin Lumber Company, Ltd., the style of the firm of Gibson, McCormack, Irvin Company, Ltd., being changed this month to the Irvin Lumber Company, in which the subject of this reference has been the central figure for seventeen years. Mr. Irvin has always taken a deep interest in the work of lumbermen's associations and is a member of the O.R.L.D.A. His father, John Irvin, was a mill man and in 1867, the year of Canadian Federation, launched a mill near Hornby, Esquimaux township, Halton County. There Mr. Irvin, Sr., conducted business for many years, sawing all timber in that neighborhood, and later removing to Brampton, established a retail lumber yard in that town while mills were operated in Pontypool, Durham County, and Dundalk, Gray County. On leaving Hornby Mr. W. C. Irvin located in Pontypool, where for eleven years he conducted a successful lumbering business. After all the white pine in that section was converted into the finished product, he removed to Dundalk where he carried on a sawmill established there by his father for seven years. It was in 1902 that he came to Toronto and formed a partnership with the late R. L. McCormack and R. E. Gibson. This organization was known as the Toronto Junction Lumber Company Ltd. In 1909 the style was changed to Gibson, McCormack, Irvin Company, Ltd., and the latest development is the new title of the Irvin Lumber Company, Ltd. In 1908 a large planing mill and sash and door factory were erected on Vine Street, West Toronto. The company, which deals in lumber, builders' supplies, and coal, has three branch yards located at 1114 Bathurst Street, Main Street, Weston, and 2410 Dundas Street. Mr. Irvin has three sons, one of whom, Charles Irvin, is secretary-treasurer of the Irvin Lumber Company, and, another John C. Irvin, is manager of the Weston branch. During the long period that he has been connected with the organization which now bears his name, Mr. Irvin has built up a growing business, and is highly regarded by the trade, being at all times a genial, obliging and sincere member of the retail lumber ranks.

Most Complete Book on Lumbering Tools

The Canadian Warren Axe & Tool Company, Ltd., St. Catharines, Ont., have issued an admirably illustrated and neatly printed catalogue of their axes and lumbering tools. The handsome and convenient catalogue is most complete and supersedes all former issues. The company announce that their factory is equipped with the most modern machinery and under the supervision of men of long experience, and that their product in the shape of Sager axes and Soo Line of logging tools, the favorite of practical lumbermen throughout Canada, will still evidence the highest quality and workmanship.

Canadians Attend Buffalo Gathering

New York State Retail Lumber Dealers Listen to Inspiring Talks and Enjoy Many Social Functions

Dr. Wilson Compton
Secy.-Manager of National Lumber Manufacturers' Association

The 25th anniversary convention of the Retail Lumber Dealers Association of New York was held at the Iroquois Hotel, Buffalo, on January 21st, 22nd and 23rd. The gathering was in every way successful and enjoyable and many practical addresses along the lines of confidence, reconstruction and expansion were delivered by leaders, not only in the lumber business, but in allied industries. The social features of the gathering were also particularly attractive. The "Prosperity Smoker," given by the Niagara frontier lumbermen, on the evening of January 21st, being the most ambitious and varied undertaking in its line ever attempted.

Among those present from Toronto were W. F. Oliver, H. Brooks, Maurice Welsh, D. C. Johnston, A. E. Gordon, W. G.

Paynes, W. C. Laidlaw, J. K. Muir, F. H. Horning and H. Boulton.

The New York State Retail Lumber Dealers Association has about 400 members and there were, along with the visitors fully 600 persons in attendance. One striking feature of the conclave was a building material service exhibit, which was open to all visitors and aroused much interest. It was announced that the association cost accounting system was there for inspection and the committee together with the cost council explained the details to anyone desiring to know them. Two or three effective announcements in connection with the final invitation sent out are particularly appropriate to all convention work.

These were: "We have Won the War. We face the uncertainties of readjustment and the opportunities of peace. To determine our future position in the field of business is our present talk. Come—it will pay you big dividends and better business."

"Non members are welcome at our sessions. If you have such a competitor bring him with you and warm him up with the real association spirit. We will make him welcome."

"If you have an idea spring it. Do not leave the convention without striking some brand new idea from the flint and steel of give and take."

Among the speakers was Dr. Wilson Compton, secretary-manager of the National Lumber Mfrs. Association, Chicago. His theme was "Can the Retail Dealer now Expect a large Expansion of Business and Why?" Dr. Compton spoke quite hopefully concerning the future and gave an outline of a conference held recently in Washington between the government and the representatives of the N.L.M.A., and the retailers. It was the original intention of the U. S. administration to dispose of the large quantity of war lumber and timber which was left on their hands, to the retail dealers. It was represented that this would flood the market and upset conditions generally. In the first place the retail merchants would not be in a position financially to handle this enormous quantity. After full consideration of the subject the government will clear the supplies on hand through the wholesalers and manufacturers at present market quotations. This will not undermine present conditions and will give stability and permanence in the distribution and consumption of wood products. Dr. Compton outlined the prospects for building, the shortage of houses, the repatriation and settlement of returned soldiers and incidentally referred to the labor unrest and other problems which would have to be watched and handled very carefully.

Attorney A. Senior, of Utica, told of the work done last year in the campaign to have a new Mechanics Lien Act passed by the State Legislature. It embodied all the desirable features which the retail lumber trade wished to have incorporated for their protection. Although the measure had gone through the house it was later defeated owing to the strong lobby conducted by the banking and building interests. Now another draft has been made and any objections which the banking institutions formerly had, have been removed, so that there is a fair prospect of the amended measure being passed at the next session of the State Legislature. A resolution was passed by the Association which in every way will back up the action of

the lumber dealers to obtain a strong and effective Mechanics Lien Act.

Many other important topics were taken up such as terms of sale and trade practices, and the anniversary banquet, held on January 22, was a delightful event. The address of Dr. Willard Scott, Brookline, Mass., on the "Physician of Good Cheer," was decidedly clever and humorous. Another feature of the gathering was a visit of the delegates, on January 23rd, to the mill of the Beaver Board Companies, at Thorold, Ont.

Are Attending C. L. A. Convention

The eleventh annual meeting of the Canadian Lumbermen's Association will be held in St. John, N. B., on February 5th and 6th, and a most interesting and instructive programme will be carried out. There are several important matters to come up for consideration particularly with regard to export problems and a number of addresses will be delivered by leading representatives of the industry. The St. John committee, who have been making the local arrangements have completed their work and a profitable and pleasant time is assured all the delegates.

Among those from Toronto who will attend the Canadian Lumbermen's Association are J. G. Cane, A. E. Clark, W. E. Bigwood, A. C. Manbert, W. J. Lovering, Maurice Welsh, W. C. Laidlaw, Duncan McLaren, A. E. Craig and G. A. Paxton (Firstbrook Bros.), Toronto; E. H. Walker, Midland; Norman C. Hocken, Otter Lake Station, and others.

Engine that Withstands Every Test

The Clay Engine Mfg. Company, of Cleveland, Ohio, have been building Clay engines for over 21 years. The "Canada Lumberman" is advised that practically every engine this firm had produced, including those shipped out many years ago, is still in operation and giving satisfaction. Clay engines are all of the four cycle, heavy duty type, especially adapted for commercial boats and fishing boats, or wherever a thoroughly dependable, economical engine is desired. They are built in 1, 2 and 4 cylinders from 4 h.p. to 110 h.p., and are constructed also for extremely heavy duty operation. Each part is designed to take many times the strain to be used for towing lumber, supply boats, etc., for the marine installation and the portable stationary engine for hoisting, power plants, etc. On account of their overhead construction they operate economically and their simple design makes them easily understood by anyone having only limited experience with engines. They are so easy to operate that the firm have never found it necessary to issue an instruction book. The purchaser receives an engine that, it is said, will give 100 per cent. satisfaction in operation and which, on account of its rugged construction will provide service for an unlimited number of years with the utmost satisfaction if just ordinary care is bestowed. The engine can be throttled down to very slow and then speeded up without carburetor adjustment, making it operate more like a steam engine than a gasoline one. All the fittings such as nuts, bolts, etc., are standard thread.

Would Regulate Portable Mills by Legislation

Safety of Maine timber lands and farm wood lots demands immediate legislation, declares Forest Commissioner Forrest Colby. Mr. Colby states that the two most serious menaces to the forest growth of this state are the portable mills and the failure of their operators and others to observe the provisions of the slash law.

The portable mill is exactly what its name indicates, a sawmill outfit of small dimensions quickly moved from one place to another. Their owners buy small lots of timber in the organized towns of the state, move their mill there, set up and proceed to denude the land. They take every tree which will make a board three inches wide and up. If they take 200,000 or 300,000 feet of lumber off the lot they are satisfied.

Slash is the waste of the trees cut for lumbering purposes. The state law requires that all operators shall destroy this. In the great lumbering regions of Maine, where the operations aggregate millions of feet annually, the law, states Commissioner Colby, is well observed. There the department has power and funds to work with. This is due to provisions of the law creating the Maine forestry district, which has for its purpose the protection of the forests. Outside the district, while the same law applies, the department has no fund with which to work. The condition is taken advantage of by the portable mill workers, who leave their slash on the ground to dry and become a constant source of danger from fire.

The National Hardwood Lumber Association will hold its Twenty-second Annual Convention, at the Congress Hotel, Chicago, Thursday and Friday, June 19th and 20th, 1919.

Lumberman Welcomed Journalists

Major Arthur Hill of Forestry Corps was First to Greet the Party at Rouen Just Before Aerial Raid

Describing a night aerial raid by the Huns on the city of Rouen, France, which took place when he, as a member of the Canadian newspaper party, visited the front, Frank Carrol, of Quebec city, who is a well-known traveller and journalist, says in a recent issue of his paper:

It was dark when we entered Rouen, and it was only by the tramway track that we were made aware of being in the city, for everything else was in complete darkness. We had considerable difficulty in reaching the Hotel de la Poste, about nine o'clock. Entering a shuttered door, we were greeted by Major Arthur T. Hill, of Quebec, who is attached to the Forestry Corps, about forty-five miles away.

Major Hill is a brother of J. K. Hill of the Radcliff Saw Mfg. Co., Toronto, and is well known to the Canadian lumber trade. He operated a mill at Belle River, Ont., and was for several years with Price Bros., & Co. of Quebec. We were begrimed with dust, and our faces looked like those of coal heavers, but the pleasant sight of a cozy lounge, filled with Canadian soldiers and a sharpened appetite after our lengthy motor ride of over 125 miles, made us relish a supper of omelettes, for which this hotel is justly famous.

Shortly after midnight the firemen rushed through the streets warning the citizens of the presence of enemy air raiders. The electric lights went out just as we were half way up the last of the four flight of stairs and we had to climb to get to our room. Half-dressed maids were flying around the passages, placing little spirit lamps in the halls, and then making a quick descent to the rotunda. Permanent guests followed, but few of the members of our party ever moved from their rooms, or awoke from their slumber. We descended to the ground floor because there had been a mistake in our room key, and there found a gathering of guests and help all wearing a rather doleful appearance. We enquired what all the excitement was about, and we were told that the Germans were bombing the town. We went out into the street to see the commotion. Here the people were rushing out of the buildings and making for the cellars. It was a fine, clear moonlight night, and away up in the sky was a huge sausage dirigible balloon, which, we were informed, was a friendly one searching for enemy planes. We remained out-doors for over half an hour, watching the sky for the approach of the Bosche, but they never succeeded in breaking through the barrage, which we heard in the distance, on the outskirts of the city, making a fearful uproar. Then we heard the firemen sound the alarm that the danger was all over, and everybody went back to rest again. Such was our first experience of a city night raid. The majority of our party never knew what happened until the next morning, while others thought that something had gone wrong with the electric lighting system, and quietly helped themselves to the spirit lamps in the passages, to light them to bed.

Next morning we visited the old Cathedral of Rouen, and the immortal spot near the market, where Joan of Arc was burned at the stake. Then we drove through some very narrow streets, having a good view of the long lines of people standing in front of the bread stores, waiting for their turn to be served with their allowance cards. Otherwise, Rouen, one of the most interesting cities of France, was much the same as usual. The tram cars were being run entirely by women.

This city is the Clearing Record Depot for the Canadian Army, which department is in charge of Colonel Lorne Hamilton, formerly of Quebec, who, unfortunately was in London when we were there. A record of every soldier going to the front has to be filed here, a copy of which accompanies him through all the different stations and places which he may pass until he returns home.

We had barely reached the outskirts of the city when we met a long procession of ambulances, probably several hundred, loaded with wounded going back from the Rheims-Soissons offensive, which had started a few days previously. Even the maimed Tommies were full of good spirits, and responded to our salutations of recognition of their valor and good luck.

Then for hours we passed camps of Hindu Cavalry, Canadians, Australians and English. They were all under canvas, along the roadway, interspersed with hospitals.

Big Forestry Scheme Planned for France

Norway intends to help out the restoration of the devastated part of France, in the front zone, by planting a belt of Norwegian forest trees. Much enthusiasm has developed for the scheme, and it is intended to begin this spring. It comprises the planting of 250 acres annually, for five years, and the money is streaming into Consul Heiberg, at Christiania. The idea is to send a forestry party of about

fifty Norwegians, fully equipped with trees, tools, tents and stores, so as not to impose the slightest burden on France. The tentative zone for planting the belt of trees is from Adrennes toward the Belgian frontier, behind Arras, where there formerly was fine forest, but action will be taken in accordance with the desires of the French.

High Honor for Major A. B. Gillies

Major A. B. Gillies, who was recently made an officer of the Order of the British Empire, is widely known in both lumbering and military circles. He has rendered splendid service overseas, and comes from a family which has played a leading part in the recent war. Major Gillies graduated from the Royal Military College, Kingston, in 1905, and later was, for several years, at Gillies Depot, near Cobalt, Ont., in connection with the lumber operations of Gillies Bros. Ltd., whose headquarters are at Braeside, Ont., where they have been established since 1873. In March, 1915, Major Gillies, who is a son of David Gillies, President of Gillies Bros., Ltd., joined the artillery branch of the service and crossed overseas in February, 1916, in command of the 30th Battery, 8th Artillery Brigade. In July, 1916, he went to France in command of this Battery and was in charge of it for several months, taking part in the actions at Vimy Ridge and on the Somme. He was shell shocked and invalided to England. Later he acted as brigade major of the First Reserve Brigade of Canadian Artillery at Whitley and Borden Camps, and was recently made a general staff officer.

Two other members of Gillies Bros. Ltd., have also served overseas with distinction. Capt. Allan R. Gillies, of Clover Bar, Alta., went over in September, 1914, in the first contingent, with the 3rd Battery, and served two years in France, at the end of which time he was invalided home. His brother, Lieut. Clyde C. Gillies, was a mining engineer on the Rand, South Africa, when the European strife broke out and shortly after returned and served in France with one of the pioneer battalions until he was wounded and sent home to Canada.

Major A. B. Gillies, Braeside, Ont.

Fixing the Salary of Mill Manager

According to information given in Supreme court in Vancouver, in support of a motion to fix the remuneration of J. P. Walsh, the liquidator of the Giscombe Lumber Company, says a press despatch, managers or superintendents of milling companies or lumber concerns generally are paid attractive salaries, ranging around \$10,000 a year. It was stated that L. D. Rogers, a Portland lumber expert, had refused to undertake the management of the Giscombe Lumber Company for less than \$10,000 a year.

The evidence was adduced in support of a motion to fix the salary of the above liquidator, who, it was stated, was acting in the dual capacity as liquidator and manager of the company, at \$600 a month, while the mill was operating in full, and at \$300 while the planing mill was closed down. The inspectors in the liquidation had recommended this payment, as had the creditors, with one exception.

Mr. O'Dell, for the disputing creditor, opposed the motion. He said there was no good reason for the fixing of the remuneration at this time. It had not been shown what the liquidator had done; what he had collected or disbursed. It was more than the liquidator of the Dominion Trust was paid.

Mr. Justice Macdonald adjourned the matter, but in the meantime would make an allowance of \$1,500 as an interim allowance.

The Quebec Shipbuilding and Repair Company, of Quebec, are clearing out their ways preparing for the construction of two large schooners, the work on which will be started soon. As soon as the timber, which has been ordered for the vessels, arrives, there will be no delay in starting the work.

Regarding the British Government's programme of 500,000 houses, Sir Eric Geddes declared recently that 160,000 had already been arranged for, and it was hoped that the remaining 340,000 would come along very fast.

Export Outlook for Red Cedar Shingles

H. R. MacMillan Before the Congress in Seattle Declares the Prospects are Not Encouraging

At the second annual Red Cedar Shingle Congress, held recently, in Seattle, Wash., some practical subjects were discussed, which included export outlook, grading, inspecting and advertising. One of the principal speakers at the profitable conference was H. R. MacMillan, of Prince Rupert, B.C., who was formerly provincial forester for British Columbia, and is at present assistant director of the Imperial Munitions Board. He discussed the possibility of increasing the export trade in red cedar shingles. Regarding the outlook for foreign business in the shingle line, he did not consider it very bright or encouraging at present.

It will be remembered that a few years ago Mr. MacMillan was sent by the Dominion Government on an extended tour of the world for the purpose of gathering information looking to the extending of the market for British Columbia forest products. He admitted there was some possibility of developing the export shingle business but in countries with similar climate to this country, like England and France, Australia, New Zealand and South Africa, he found an absence of wood coverings for buildings. In the countries mentioned iron and slate and other "substitutes" are used for roof covering and the real advantages of shingles must be shown. A most natural

H. R. MacMillan, Prince Rupert, B.C., one of the speakers at the Red Cedar Congress in Seattle.

P. D. Roe, Port Moody, B.C., President of the B. C. Lumber & Shingle Association for 1919.

field to cultivate is Australia and New Zealand, where originally hardwood shakes were first used, and then followed galvanized iron and plates. Not more than 2,000,000 shingles have ever been exported annually to Australia and they went practically all to Sydney. He found that it cost at the time he visited Australia, \$7.20 to cover a square of roof with galvanized iron; \$10.80 for tile and \$16.80 for shingles, which were then selling on Puget Sound at \$1.85 a thousand and freight was not over \$1.50 a thousand. Shingles were retailed at Sydney for \$9 a thousand which cost the dealer laid down \$5.50, and on which he obtained a profit of \$3.50. One reason that shingles are expensive to use in South Africa is that solid lumber sheathing has to be put under them there, and lumber sells for from \$60 to \$70 a thousand feet there.

Those regions were originally settled by English who were accustomed to tile roofs. He noticed, however, that in Australia with the advent of motor cars people are now living farther out in the suburbs, and the redwood manufacturers of California put up a sample bungalow of redwood partly sided with shingles, which was serving a good purpose in creating an interest in more comfortable and artistic homes. He spoke of the prejudice in that country against using water coming off of shingle roofs and also told of the great expense in laying shingle roofs, which, however, could eventually be overcome to some extent.

Mr. MacMillan was personally of the opinion that there would not be much of a demand in Europe for shingles for rebuilding after the war because of the large amount of demobilized labor that must be employed and would be put to work in making slate and other roofing. To develop an export shingle business would need an organized campaign and he was of the opinion that there are countries or States in this country that will use more shingles than could be sold in all the foreign countries of the world and that the same

effort and expense would get greater results in this country than in foreign markets in promoting a greater use of shingles.

Officers Elected by B. C. Lumbermen

A most successful and enjoyable banquet was held recently at the Hotel Vancouver, Vancouver, when a number of important matters were discussed by the B. C. Lumber and Shingle Association and the B. C. Loggers Association. Among the matters considered was that of the government orders for lumber, but no definite steps were decided on in the latter instance, the members deciding it was better to await positive information.

The election of officers for the two organizations has taken place, P. D. Roe, of Port Moody, having been elected president of the lumbermen, and N. S. Loughheed, of Port Haney, of the loggers.

The officers of the B. C. Lumber & Shingle Association for 1919 are: President, P. D. Roe; vice-presidents, E. C. Knight and F. R. Pendleton; Directors, J. D. McCormack, G. R. Hackett, L. A. Lewis, E. J. Palmer, A. L. Hendry and D. McLeod.

The officers of the B. C. Loggers' Association for 1919 are: President, N. S. Loughheed, Abernethy & Loughheed Limited, Port Haney; vice-president, F. C. Riley, Bloedel, Stewart & Welch, Limited; secretary, W. B. W. Armstrong; assistant-secretary, Geo. F. Rofe. Directors: T. A. Lamb, Lamb Lumber Co., Limited; G. G. Johnston, Capilano Lumber Co., Limited; M. D. Rector, International Timber Co.; L. H. Weber, Brooks-Scanlon-O'Brien Co., Limited; A. E. Munn, Gordon Development Co., Limited; J. M. Dempsey, Dempsey Logging Co., Limited; E. G. English, Nimpkish Lake Logging Co., Limited; F. R. Pendleton, Straits Lumber Co.; P. A. Wilson, Wilson-Brady Limited; J. R. McDonald, of P. B. Anderson.

Freight rates on regular steamships plying between Canada and the British Isles have dropped to \$1.50 per cubic foot. This announcement by shipping companies is accepted by Montreal shippers as indicating that in the next few months space will be seeking cargoes. The rates before the war were thirty cents per cubic foot.

Mr. Barclay Finds Coast Men Optimistic

L. D. Barclay, Toronto, manager of the Toronto office of the Canadian Western Lumber Company, Fraser Mills, B.C., returned recently from an extended visit to the Coast and to his parents in Edmonton. He goes west once a year to spend several weeks and get a line on the general outlook. Mr. Barclay reports that there is a distinct feeling of optimism prevailing throughout B. C., and that mill men are looking forward to a large export trade. An order of 100,000,000 feet for B. C. fir will be placed by the British Government just as soon as the transportation facilities are arranged. It is understood this consignment will be mostly for stock stuff and consists of boards, sheeting, flooring, ceiling, general house trim and small dimension which can be filled from the ordinary yard supplies. The prices named have been accepted by the British Timber Controller and the order will be filled as soon as the Admiralty provides the necessary ships. Mr. Barclay looks for prices on various lines to stiffen somewhat and says there is a brisk demand for shingles. Since the embargo was taken off them at the close of the war a lively market has developed across the border, and shingles, which have declined from 40c to 50c., are now commanding their regular figures. Fully 80 per cent. of the shingle mills are in operation.

P. J. McCormack, who has been associated with Mr. Barclay for the past two years and went west with him, will not return to Toronto. He is now with H. J. Mackin, assistant manager, and will have supervision of the sales department. During his residence in the east, Mr. McCormack, by his courtesy, geniality and attention to business, made numerous friends, who will wish him every success in his new sphere of activity.

National Association Will Meet in March

An important meeting of the Board of Trustees of the National Wholesale Lumber Dealers' Association, at which W. Gerard Power, of St. Pacome, P.Q., and Gordon C. Edwards, of Ottawa, were present, was held in New York on January 15th. Many matters of weight and interest were brought up and it was reported that the membership of the Association is to-day 455, which is the largest on record.

There was considerable discussion as to the time and place of holding the next annual meeting of the Association. Invitations were received from several cities and the trustees unanimously voted to meet in Philadelphia on Wednesday and Thursday, March 19th and 20th. This will be the twenty-seventh annual meeting of the Association and the growth of the organization indicates that the convention this year will be one of the most successful in the history of the Association.

Boom and Improvement Companies

Officers Elected for the Coming Year and Good Reports
Presented on the Past Season's Operations

The annual meetings of several organizations of Ontario lumber manufacturers operating in the Georgian Bay district were held in Toronto at the Queen's Hotel on January 15, 16 and 17, and considerable important business was transacted. Everything in connection with the business of the different concerns was reported to be satisfactory considering existing conditions, and the reports of the year's work revealed the excellent effects of cooperation in the matter of handling logs and in carrying out various improvements in driving and rafting.

The French River Boom Co., Limited, which handles all the logs

Hope Lumber Co., Thessalon; J. J. McFadden, McFadden and Malloy, Spragge, and W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet.

The Spanish River Improvement Co., Limited, presented an interesting report on the improvements carried out on the Spanish river. The officers for 1919 are: President, W. F. Bigwood; vice-president, George R. Gray, Spanish River Pulp and Paper Mills, Sault Ste Marie; Secy.-Treas., Charles McCrear, M.L.A., Sudbury. The directors are W. J. Bell, J. J. McFadden and F. N. Waldie.

The Sable & Spanish Boom and Slide Co. of Algoma, Limited, which handle the logs out of the Spanish river, elected W. E. Bigwood, President, and W. J. Bell as Secretary-Treasurer. Directors, W. J. Bell, J. J. McFadden, George T. Jackson, Little Current Lumber Co., Little Current, and J. A. Ferguson, Spanish Mills Co., Massey.

F. N. Waldie, Toronto, Secy.-Treas.
Mississauga River Improvement Co.

W. J. Sheppard, Waubashene,
President, French River Boom Co.

W. J. Bell, Sudbury, Sec.-Treas. Sable and
Spanish Boom and Slide Co. of Algoma.

A. E. Beck, Thessalon, Member of Management
Committee, Log Picking Association.

W. E. Bigwood, Byng Inlet, President,
Spanish River Improvement Co., Ltd.

John R. Stover, Blind River, President,
Mississauga River Improvement Co., Ltd.

of the various owners coming down the French river to Georgian Bay, elected W. J. Sheppard of the Georgian Bay Lumber Co., Waubashene, as President, and W. F. Beck of the C. Beck Manufacturing Co., Penetanguishene as Secretary-Treasurer. The directors for the coming year are F. N. Waldie, of the Victoria Harbor Lumber Co., Victoria Harbor; Wm. Irwin, Peterborough; W. E. Bigwood, Graves Bigwood & Co., Byng Inlet; and W. J. Bell, Spanish Mills Co., Sudbury.

The Mississauga River Improvement Co., Limited, which handles the logs coming down the stream which bears this name and looks after all improvements, elected John R. Stover of Eddy Bros. and Co., Blind River, as President, and F. N. Waldie of the Victoria Harbor Lumber Co., as Sec.-Treas. The directors are C. N. Carney of the

The Log Picking Association, which operates on Georgian Bay, in the matter of the recovery of logs lost in the operation of towing rafts, etc., elected the following committee to look after its affairs during the coming year: W. J. Sheppard, Georgian Bay Lumber Co., Waubashene; F. N. Waldie, Victoria Harbor Lumber Co., Victoria Harbor; W. E. Bigwood, Graves, Bigwood & Co., Byng Inlet; E. Letherby, Chew Bros., Limited, Midland; C. N. Carney, Hope Lumber Co., Thessalon; W. J. Bell, Spanish Mills Co., Sudbury; J. J. McFadden, McFadden and Malloy, Spragge; A. E. Beck, C. Beck Manufacturing Co., Thessalon; George D. Jackson, Little Current Lumber Co., Little Current; H. H. Bishop, Bishop Lumber Co., Thessalon; J. R. Stover, Eddy Bros. & Co., Blind River; W. F. Beck, C. Beck Manufacturing Co., Penetanguishene.

Miscellaneous

Tenders for Timber on Lower French River Indian Reserve

Sealed tenders addressed to the undersigned and marked on the envelope "Tender for Lower French Timber," will be received until noon of Wednesday, the 26th day of February, 1919, for the merchantable Basswood, Elm and Birch timber on the Lower French River Indian Reserve, in the district of Parry Sound, in the Province of Ontario.

Tenderers should state the amount of cash bonus they are prepared to pay for the timber over and above Crown dues payable under sworn returns furnished by a licensed culler. An accepted cheque on any Canadian chartered bank for ten per cent. of the bonus tendered should accompany each tender, the balance of the bonus to be paid within thirty days from date of notification of acceptance of tender.

An annual license will be granted to the successful tenderer, and five years will be allowed for the removal of the timber under the regulations of the Department.

Any further information desired may be obtained upon application to the undersigned, or to Alexander Logan, Indian Superintendent at Parry Sound.

The unauthorized publication of this advertisement will not be paid for.

Sale of Pulpwood Lands in Northern Ontario

The Lake Superior Corporation and Algoma Eastern Railway Company are open to negotiate for the disposal of certain lands

Approximately 682,000 Acres

situated for the most part in that section of Northern Ontario known as the Clay Belt, and comprising the Townships of Storey, Langemarck, Dowsley, Nassau, Shetland, Staunton, Orkney, Magladery, Caithness, Rykert, Doherty, Whigham, Coppel, Newton, Dale, McOwen, Frater.

The lands in question are accessible to the Algoma Central, Trans-Continental, Canadian Northern, and Canadian Pacific Railways, and should be of particular interest to pulp and paper makers, also to settlers, in view of their agricultural possibilities.

General information will be furnished and plans exhibited at the office of Mr. Alex. Taylor, secretary of the Lake Superior Corporation, 1428 Bank of Hamilton Building, Toronto, or at the office of Mr. G. A. Montgomery, vice-president of the Algoma Eastern Railway Company, Sault Ste. Marie, Ont.

BELTING FOR SALE

Review of Current Trade Conditions

Ontario and the East

In a general way trade is quiet at the present time and retail dealers are not buying very much lumber or other building supplies except for immediate use. While considerable discussion is heard with respect to building operations there is one thing to be remembered, and that is, large structural projects do not take definite shape until about the middle of March. There are a number of enquiries being received from contractors and housing companies, but just how many of these will materialize remains to be seen. Those who are disposed to take a conservative view of the situation, believe that the amount of building to be done this year, in conjunction with long neglected repairs and renovations will result in a bigger turnover than in any period since the war. Some house owners, warehouse men and manufacturers may still be holding aloof in the hope that lumber will fall in price, but all economic and administrative points of view demonstrate that there is little foundation for the expressed hope. It is costing much more to get out the timber this year than it did last. One leading firm states that lumber will cost at least \$2 a thousand more than it did in 1917-18 from all the reports that it can gather. Others place the amount as high as \$5.

The mild weather of January did not help logging operations as the roads were impassible, owing to the wet ground and frequent thaws, streams in many cases were not frozen over and hauling the logs was impossible. The warm days caused the lumbermen many anxious moments. The month was the balmiest in many winters which was very welcome to the consumer of fuel, but not at all pleasing to the lumber manufacturer, who sought to catch up in his cut and get out as large a quantity of timber as possible. Owing to the decreased cut of last year and the promising increased demand in 1919—which will, in all likelihood result this season—due principally to the large export business certain firms have felt that they could put on a little more sail, so to speak, and push production to the highest possible point, considering the labor handicap in the early fall.

There is on the whole a quiet confidence prevailing in the trade and at a representative meeting of Ontario lumbermen, held in Toronto, when it was decided to send a delegate abroad in the interests of bigger business, not a discouraging note was heard. Everyone expressed the belief that everything was going to turn out all right in 1919 and the year would see as large a production as did 1918 if weather conditions enable the operators to get out the material. Labor is plentiful at the present time, the number of enquiries is encouraging and so far as the average onlooker can discern, while business may not unfold as rapidly as some ardent exponents expect, still the volume is bound to come. It may be slow in starting, but once on the way it will gather speed and force. There is no disposition to cut prices on the part of the larger firms and the fact that it is now three months since the European chaos has terminated and generally values have held, should prove conclusively that everything is going to come along all right and is basically sound. Any hesitation or caution that may be evidenced at the present time should not be interpreted as want of confidence or a sign of weakness. On the contrary such manifestations are only the natural development of the large economic readjustment through which Canada is passing after the displacement of regular business and market facilities during the last four years. Naturally if a perceptible check has been experienced, it need not create any surprise or prove an indication that something is wrong fundamentally. There need be no apprehension about the future if the trade stand firm and face conditions for the next few months as quietly, calmly and confidently as they have been shown during the month just closed.

Great Britain.

The market for hardwoods remains firm, and there is a considerable amount of activity owing to the Government holdings being offered round the market by the brokers. As the restrictions on private trading have been removed there will doubtless be considerably more competition to secure suitable parcels of American oak, red gum, etc.

In regard to native grown timber the market is generally firm with a fairly good demand. All kinds of home-grown woods are in request, and there are considerably brighter prospects for trade when business begins to settle down after the holidays. As it is likely to be some time before any large quantities of American woods reach

this market, there is every reason to believe that the demand for native timber will continue strong.

The relaxation of the Control regulations has afforded a great sense of relief to the trade. The powers of the Timber Controller may now be enumerated as follows:

- (1) Permission is still required to purchase abroad.
- (2) Maximum prices for home and imported timber remain in force.
- (3) The Pitwood Order fixing areas of supply and maximum prices of pitwood continues to apply.

In plywoods the market has been in rather a "jumpy" state lately, though matters will probably right themselves very shortly. The quantity of plywood in the country is not excessive, and there will probably be a very fair demand for the wood later on for furniture making. The manufacture of furniture has been practically at a standstill for some long time, so there is plenty of work to be made up here. The stocks of plywood available in the country will come in very useful for the purpose, as in furniture making large quantities of this wood are utilized.

There has been a fair demand for South Wales mining timber, and although the imports from France were not so heavy, still collieries were well supplied. Most collieries had good stocks on hand, and were, therefore, in a position to withstand the curtailed deliveries. There was a fair amount of Irish wood received, but the total quantity was not so heavy as was the case during the past few weeks. Deliveries of wood from the adjacent counties has been slow owing to the inclement weather experienced.

The shortage of tonnage continues to be very severe, though when the Government sets free some of the boats that are at present being used for other work the situation should be much relieved. For the transport of troops alone a very large number of tramp steamers are being used. Many of these will shortly be available, owing to the launching of new boats, which is going on every day. Standardized ships are appearing in gradually increasing numbers, and these boats are making all the difference to the freight question. The Canadian shipyards, too, says an exchange, have lately been turning out many new wooden steamers; and although they are mostly of small carrying capacity they will come in most useful in these times. It is gratifying to know, too, that nearly all these Canadian-built boats are being used for timber-carrying. This is very satisfactory, so far as the wood trade is concerned. Other steamers will also probably be given over for the carrying of wood cargoes, though all, of course, will be under the control of the Ministry of Shipping.

United States.

While there are no outstanding features and trade is comparatively quiet, it is the general belief as spring approaches there will be a great deal more business offering. The general condition of the market will depend very largely on export. It is felt that lumber prices will not fall. It could be supposed that the fact that prices for lumber for a multitude of reasons will not and can not come down from its present far from unreasonable levels, for years perhaps, by this time would be universally recognized; but apparently there still are vast numbers of would-be home builders, architects, contractors, even lumber retailers, and other consumers, who believe a decline in lumber prices imminent and who therefore judge it as their duty toward themselves to stay off the market a little longer, until then. The trouble with these people is that they are not properly informed as to the underlying factors that will determine the trend of future lumber prices. They need to be educated on this point, and quickly. The needs of the country are such as to demand a large construction programme, to be started and completed as soon as physically possible. At the "Readjustment congress," recently held in Houston, Tex., an idea was advanced that advertising would start people building. That seems the real solution to the problem. It would have immeasurably valuable results would the dealer when speaking to the people through his advertisements in the community newspaper point out to them the reasons why lumber though higher is likely to go still higher, and why lumber prices can not come down to anywhere near pre-war levels perhaps for years to come, and why, therefore, the wise man builds now.

A further increase in the demand for hardwoods, of practically all the commercial varieties, and in the number of inquiries received is reported from nearly all points in the hardwood belt. It is apparent

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

that a steady though perhaps gradual improvement in the hardwood trade from now on can be expected. Building operations begin to expand, and this is reflected in a heavier call for flooring, ceiling, siding and interior trim. Box interests are actively on the market, taking all offerings of low grade cottonwood and gum. Automobile manufacturers are buying heavily, gathering in all the material possible in preparation for a heavy production of pleasure cars and trucks during the year. Furniture interests also, though as yet uninformed as to the coming season's styles and therefore not yet seriously on the market, are working a little more freely and are purchasing now and then. The export trade is expected to materialize soon into a strong factor, and many manufacturers profess not to see how, with a tremendous domestic demand also awaited, both can satisfactorily be handled. But despite all this there still are buyers who try to force down prices by staying off the market except for hand-to-mouth

requirements; but they meet with little if any success. The manufacturers have too much confidence in the future to consider giving up their fight for fair prices and profits now.

Conditions in the southern pine industry are sound and are rapidly returning to normal, all reports agree. Domestic inquiries and orders continue to come in, in a constantly growing volume as a matter of fact; and some manufacturing centers claim that their mills actually have more than they can do. And this in face of a huge export demand that everything indicates will soon develop. Doubt has been expressed if, when this business materializes, the industry will be capable of satisfactorily meeting all demands that will be made upon it. Under these conditions prices naturally hold very strong, and there remains only one guess as to their future trend. Most of the business at present transacted apparently is direct-with-the-mill trade from industrial and railroad sources.

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

St. John Manufacturers are Moving Some Stocks

The outlook for sales to the British Government of deals from St. John is more promising. The manufacturers feel there is a possibility of getting rid of the old stocks which they have on hand and were sawn in 1918, and probably the new stocks to be sawn in 1919. A few sales of some 20 million feet have been put through during the last two weeks. While the prices are not all that can be asked for, still they are fair for some classes of logs which, in certain cases, are not costing as much as others. Logs that are being cut near the city and have no long drive or expensive rafting to bear, can be sawn up and the manufactured lumber sold much cheaper than the logs which have a long expensive drive from Maine and Quebec coming over the St. John. The present prices being offered by the Munition Board in England do not warrant selling the highest price log lumber, as it will not pay the cost of logs, plus the expense of manufacturing. Deals are being sold at or around \$35 per M. on wharves at St. John. Country sawn rotary deals are bringing around \$30 per M. delivered in St. John, but very few are wanted, as the buyers desire city cut well-sawn deals. The rotary-cut deals are usually inferior both as to size of log and to manufacturer. Stocks of pine boards are bringing fair prices and very little is to be had.

The local building market is not good and factory work is getting scarce. The present prospects are not bright and what the future has in store is quite a conundrum, which no one as yet can answer.

Work in the woods is going on in fine shape and at present writing the hauling is good. Should conditions remain as at present all operations will be able to get their logs to the river banks.

Laths, shingles and short stocks are in poor demand. The mills at St. John are all idle, undergoing their usual winter's repairs. Labor is more plentiful and all men needed for the woods are now available.

Montreal Outlook is Regarded as Encouraging

Trade in Montreal is quiet, and in no department is there any business worth mentioning. For all that, there are expectations of better things; these may not materialize for a couple of months, but with the opening of spring, wholesalers look for an appreciable all-round improvement, especially if the British orders come along.

From the local point of view, the outlook is encouraging. Architects state that they have a considerable amount of work in hand, and there are also many projects held over from the war period. How far this work will be carried out depends to a certain extent on a reduction in prices of material. Already certain classes of material are cheaper. As to labour, the supply is now more abundant, but wages for skilled men in the construction trade are still high, and are likely to continue so until the cost of living is lower.

Wholesalers state that prices asked by the mills in the province are stiff, and that further East the quotations are away ahead of last season—"crazy" one wholesaler termed them, but of course this all depends upon whether a firm is a buyer or seller.

Inquiries from the United States have picked up slightly.

Reports from several points in the province show that conditions are against large cut. Apart from the difficulty of securing labor in the early part of the season, the influenza epidemic hampered woods operations. On top of this, the fall of snow in many districts is very small, thus making it difficult to adequately deal with hauling. Labor, for the woods and manufacturing, however, is more

plentiful, but it comes too late to be of any substantial value to lumbermen. Wages, too, are reported to be on the down grade.

The pulpwood situation continues good. The demand is fair, with prices firm. American and Canadian mills are heavily stocked, having bought freely last year. The conditions are against any large supplies for the present season, owing to operations being handicapped by want of men and climatic conditions.

Ottawa Reports Business Generally Quiet

A very quiet two weeks so far as sales were concerned featured. For the whole month sales and business generally never got within striking distance of the "peak" of the upward curve.

Orders were slow, shipments few, and inquiries were only fair. These adverse indications are more or less noticeable every year about this time, but the opinion generally had an inclination that the symptoms of dull business were more pronounced than with a corresponding period a year ago. The signs of depression mentioned above must not be taken to mean that the bottom has fallen out of things. Quite the contrary was the case. The market for the whole month remained just as firm as to price as it had been. There was simply very little business going on.

Looking ahead and anticipating the future the lumbermen on the whole were a long way from being discouraged. Brighter and better times and conditions they asserted were bound to come, with the natural re-opening of the export trade, following the cessation of war.

Some expected the export trade to open up as early as April, while others did not think that much would be done in the line of sales until the latter part of March. Just where stocks are and what is going to be done with them as to price or selling in big blocks was a matter of some concern.

The wholesalers were buying practically from hand to mouth in a slow period. On the other hand it was reported the manufacturers were not breaking their necks to get rid of any standard stocks they had at a decrease in price. If the wholesalers had to have the stock he usually put up the amount asked or went without.

All retail lines were decidedly slow. The outward signs appeared to be that the manufacturers were not going to cut any prices on the present held stock, believing that with the opening of export that present prices would at least command present levels, if they did not go higher. Consequently it appeared to be a case of sitting tight all around.

Two of the biggest factors in making the trade slower at this season, as compared with last year, was the cessation of the shell box industry and the practical non-continuance of orders going to the United States for war purposes. Transportation and embargoes rather than an abundance of orders, worried the trade last year, but now the reverse reflects the situation—lots of cars, few embargoes—but orders and shipments curtailed.

Taking reports of representative interests all around the conclusion seemed to be that the period of "readjustment" was actually beginning to be felt as between war and peace-time demands. Orders hardly reflected the situation properly, and there seemed to be a deeper feeling to the effect that lumber manufactured and produced at high costs must necessarily be disposed of at some profit at least, if operators were not going to suffer. This, while a theoretical explanation, might easily be the actual one, as lumber was one of the last commodities to advance in price after the war began, and owing

Klim is needed every day in camp

Though far away from cows and milkmen your men can enjoy the flavor and food value of genuine separated milk every day. A supply of Klim is all that is needed. Klim is in powder form ready to be mixed **dry** with flour, sugar etc. in baking and cooking. Whip into water for use as liquid, it makes a delicious nourishing, natural-flavored milk drink. Klim is not boiled nor cooked, the "life" of the milk is not impaired, and the flavor is unchanged.

Klim is economical. Costs less than any other form of milk, cheaper to ship, bulks smaller, weighs less, no waste, will not freeze or sour.

to the nature of the operations—supplying of camps, labor, wages, etc., should correspondingly be one of the last to go down.

The whole issue seemed to be that if the price of lumber kept up, there were going to be fewer buyers and less building operations go on. On the other hand, with the opening of export any fancied surplus of stocks would be removed and demand and supply would draw closer together. In other words it seemed the high cost of production, owing to war conditions, would be ultimately passed on.

With perhaps one exception the woodworking factories were much worse off than a year ago. Some were reported to actually be running at a loss. Operations were curtailed to eight hours, though the scale of wages was not cut. Factory labor was plentiful. The wages of labor, both in the factories and the sawmills, according to reports, will be at a lower scale next season. One operator stated that the expectation was that the general wage for sawmill labor would eventually decline. All building grades (except for repairs), sash and door, shingles and lath, remained slow.

Big Increase Shown in Lumber Exports

A report from Parrsboro, N.S., shows that during the past year 18,651,176 feet (sup.) of boards, deals, planks and scantling were exported to the United States, valued at 438,416.71. The shipments of deals and other lumber to South Africa and elsewhere amounted to 2,642,899 feet, valued at \$84,609.84, making a grand total of 21,294,075 feet valued at \$523,026.55. This is a big advance over 1917, when the total shipments of the same kinds of lumber amounted to 10,001,909 sup. feet, valued at 177,656.95. The exports of piling during the year aggregated 13,404 pieces, valued at \$33,088.00. The figures last year showed 9,605 pieces valued at \$21,652.50. In laths there was a large falling off the total exports being 4,228,000, valued at \$10,810.55, while in 1917 the total reached 7,058,700, valued at \$21,653.75.

How Sitka Spruce Operations Were Conducted

D. M. Hatt, M. A., secretary of the Y.M.C.A. at Moresby Island, B.C., Administration Camp of the department of aeronautical supplies of the Imperial Munitions Board, at Thurston Harbor, Queen Charlotte Islands, who returned to Vancouver when the camps were closed down recently, tells an interesting story of the spruce industry on the Queen Charlottes. Mr. Hatt went up to the Islands in June last year and established Y.M.C.A. headquarters at Moresby Island.

Sitka spruce, which is light and tough and of a fine grain, was cut on the islands for the making of aeroplanes. The ordinary spruce is of a fine grain, but has not the combined qualities of the Sitka spruce, and therefore the latter variety was the only spruce cut. The department of aeronautical supplies of the Imperial Munitions Board let contracts for the cutting of this spruce, the contractors being guaranteed a year's returns for one year, while the expense of placing the mills and camps was also paid by the department.

Two groups of camps were built, one at Masset Inlet, which contained 24 camps besides the ordinary hand-loggers. The other group of camps was at Moresby Island. The Board built a headquarters camp at Thurston Harbor. These camps were established as close to the water as possible. Camps were chiefly on Skidegate Inlet, Cumshewa, Selwyn, Atli Inlets and Sedgwick Bay. The logs were placed in the water and towed to the booming grounds at Thurston Bay. At Thurston Bay large rafts containing 500,000 to 600,000 feet were towed by ocean-going tugs to Prince Rupert, Georgetown, and Swanson Bay, where they were cut by the mills. This was a dangerous practice and during the winter three large Davis rafts, valued at \$35,000 each, were lost owing to rough weather. The Imperial Munitions Board then decided to requisition the sawmill at Buckley Bay and other small mills, one being at Queen Charlotte City, one at Thurston Harbor and one at Cumshewa. Just when these mills were ready to begin sawing the spruce the armistice was signed, and there was no further use for them. Only one mill was running at the time the armistice was signed. The others would have been ready to start within a few days.

The Moresby Island camp had felled 30,000,000 feet at the time of the signing of the armistice, while the other camps had about the same amount.

Organizations of an export combination under the Webb Law under the auspices of the Southern Pine Association is reported to be practically complete. The combination will probably be known as the American Pitch Pine Export Company. The understanding is that approximately 50 mills with a productive capacity for export purposes estimated at about 4,000,000 board feet will be represented.

Retailers Confident Regarding Future

More Representative Lumber Merchants Review Conditions of Past Year and Prospects for 1919

J. R. Eaton & Sons Ltd. of Orillia, Ont., state that during the past three years they have found trade conditions somewhat trying from their standpoint. With the gradual advance in the cost of lumber and wages, and the steady decrease in the amount of building, it has been rather difficult to secure at all times the price which the firm feel their lines should command. During the year the labor situation grew more acute and they found they had to increase wages from time to time and, with higher wages, the lower the efficiency.

The company add:—"In reference to the outlook for 1919, we would say that new work is rather slow in coming out, but under former conditions we have always found that in our particular line the months of January, and February are quiet. The small amount of work under construction last year, and added to this the cessation of hostilities early in November, had the tendency if anything, to make December below that we would have experienced under normal conditions.

Stocks are very slow, but at present while very little stock is moving there is very little if any tendency towards lower prices. In fact, we cannot see how the prices can be reduced on this year's cut. The cost of getting out the lumber was practically all fixed before the signing of the armistice; therefore it now appears that the only possible saving there can be on this season's cut is that which may be affected in the handling of the stock at the mills. This would at present appear to be so small as to not be worthy of consideration.

We cannot expect much new work for the next few months as it will take some little time for the building trade to even become partly readjusted, but we feel that the future is full of good prospects. The planing mill and lumbermen came through the war period much better than they anticipated and since we came through the greater struggle so well, we have every confidence that we will come through the readjustment period equally as well.

Jas. Matthews, of Orangeville, Ont., chairman of the new district association No. 6 of the O.R.L.D.A., reports that business with him was very fair during his past season. Most of the work consisted of small jobs and repairs, but on the whole the outcome was satisfactory. The Dad Knitting Company, of Orangeville, erected an addition to their mill 54 x 75 — four storeys high. This was the largest job which Mr. Matthews secured. He states that the prospects for 1919 are not as bright as they might be, as there appears to exist a general feeling that prices should come down, although there does not appear much prospect in that direction at present. Payments are coming in very good, but Mr. Matthews reports that there are always a few slow ones who require "jogging up."

H. J. Hall & Son, of Kitchener, Ont., say that the only buildings done in that city to amount to anything in the past year, were several factory additions. Although it is yet too early to comment on the outlook for 1919, they are looking forward to better business than the last four years has witnessed.

Has Built New Saw Mill at Lion's Head

Charles Pedwell, of McVicar, Ont., is erecting a new sawmill at Lion's Head, which will be running early in February. The mill has the usual machinery contained in a small circular mill with gunshot feed, carriage, double edgers, trimmers, butting saws, etc. Mr. Pedwell's mill at McVicar will also run next summer cutting a fair quantity of stock. He has three camps in the woods this season. The mild weather has not upset his operations to any extent as the camps only started about December 15th and cutting and skidding will be carried on all winter. A recent light snowfall has been of considerable help. In the past three years Mr. Pedwell has been compelled to curtail production, owing to the large number of his men who went overseas, only a few of the old crew remaining. With the return of the boys from the front Mr. Pedwell expects to carry on operations more extensively.

The War Badger was launched from the decks of the British American Shipbuilding Company, Welland, Ont., the ceremony being witnessed by thousands of citizens. Construction of the vessel was started in May last. She is of 3,500 tonnage, being 261 feet long, 43 feet beam. She will be ready for ocean service early this spring. The boat was christened by Mrs. H. E. Davidson, wife of one of the directors of the British American Shipbuilding Company, which built the War Badger. A sister ship, the War Weasel, was launched early last fall and is rapidly nearing completion. Two more ships 320 feet long are being built by this company in Welland.

Hamilton Lumber Firm Opens New Branch

Wm. M. Findlay,
Hamilton, Ont.

Wm. M. Findlay, who for the past five years has been on the staff of the Long Lumber Company, Hamilton, Ont., covering all parts of Western Ontario and the Niagara peninsula in the interests of the firm, has taken up his residence in Toronto, as manager of the branch which the Long Lumber Company has opened in the city, at 25 Toronto Street, corner of Adelaide Street. Mr. Findlay is well and worthily known to the trade and for a number of years previous to joining the Long Lumber Company was a successful contractor in the Ambitious City, where he served twelve years as a member of the city council and was Chairman of the Board of Works for two terms. He was the first man to introduce the laying of tar macadam roadways in Ontario. Mr. Findlay knows the

lumber business from both the buying and selling ends and his firm handles all kinds of soft and hard woods, B. C. forest products, timbers, ties, shingles, lath, etc.

Lieut. Roy C. Anderson, who was formerly manager of the Consumers' Lumber Company, Hamilton (which is the retail branch of the Long Lumber Company), has returned from overseas service and assumed the duties of Mr. Findlay. Lieut. Anderson was in the Mechanical Transport Division for a considerable time at Camp Borden and later was with one of the tank battalions. He is a brother-in-law of Guy H. Long.

Shipbuilding in the East Likely to Continue

Several large schooners—two of them four-masters—were launched in the vicinity of Parrsboro, N.S., in the latter part of December, but several others that were to have been put afloat last year, were held up by rainy weather and scarcity of labor. However, the mild weather of the last three or four weeks has favored the builders, and some of them have undoubtedly done all they possibly could to make up for lost time. One of the first vessels to leave a Nova Scotia shipyard this year, and perhaps the very first, was a tern schooner of 400 tons register, which was launched at Hantsport on the 2nd instant. Another of 391 tons was put off at Port Greville on the 4th inst., and a four-master of 527 tons register, was launched at Advocate Harbor on the 7th. A tern schooner at Eatonville is ready for launching, and will, if the weather permits, be turned off the next high tides. There have been other launchings since the new year came in—quite a number of them—in other parts of Nova Scotia, but the ones mentioned above were all built on the shores of Minas Basin and its tributaries. There is quite an object in getting the new vessels afloat as soon as possible, for there is a big demand for lumber in South America, and suitable carriers that are ready for sea can get cargoes immediately at profitable rates.

There is at present a great diversity of opinion concerning the future of wooden shipbuilding. Some authorities are decidedly pessimistic and predict a tremendous slump in freight rates and an oversupply of bottoms. Others, while admitting that there must be a big decline in the prices paid for transportation, claim that for a year at least there will be a demand for all the vessels afloat. Some shipyards may close this year, but it is probable that the number of vessels built will not fall far below last year's output. So far as is known at present, all the shipyards on this shore will be working, with the possibility of some new ones being started. At Parrsboro one vessel that was commenced last year will not be completed until next spring. The builders of the big four-master "Governor Parr" have a tern schooner partly in frame and will probably build another before the year ends. No doubt prices will go down, but more vessels are needed on this shore and shipbuilding is likely to continue for years to come.

Shipbuilding News from East and West

The steel shipbuilding department of the Imperial Munitions Board has removed from Ottawa to the Drummond Building, St. Catherine St. West, Montreal.

The construction of two four-masted wooden schooners will soon be undertaken by the Quebec Shipbuilding & Repair Company at its

St. Charles river yards. One of the two vessels will be built along the same lines as the schooner Edgewood, recently launched by this company and now at Halifax after a most successful trip. She will be 170 feet of the keel, 200 feet over all; a moulded beam of 30 feet with a depth of hold of 15 feet. Her tonnage will be 1,240 deadweight. The other schooner to be constructed will be along the lines of the M. P. Connolly, also built by the Quebec Shipbuilding & Repair Company, and will be 223 feet long, with a 42 ft. 6 in. beam and 19 ft. 10 inch depth of hold. Her tonnage will be 2,200 deadweight.

Rumors are current in well informed circles that an extensive building plant will be operated at Oromocto, N.B., and there is every likelihood that in the near future the building of wooden ships will be commenced. New Brunswick and Old Country interests are behind the project.

Twenty-five vessels, eight steel and seventeen wooden, with a gross tonnage of 108,500 tons, represents the product of four Vancouver shipyards during 1918. Of these seventeen are now on the high seas or taking cargo. All the yards are working to capacity. During the year the Wm. Lyall Shipyards were particularly busy turning out eleven wooden steamers with a total of 29,300 gross tonnage. The Western Canada Shipyards turned out six fine wooden steamers for the Imperial Munitions Board with a total gross tonnage of 16,800. Five ships are now under construction for French interests. The Wallace Shipyards, which are the pioneer shipbuilding plant in B. C., have been engaged exclusively in steel shipbuilding. The Coughlin yards turned out eight steel steamers and employed 3,000 men. The payroll was approximately \$6,000,000.

The wooden ships built at Lyall's and the Western Canada yards in 1918 were as follows:

War Budget—February	2800
War Cariboo—April	2800

Making All Kinds of Steel Wire Rope

The Canada Wire & Cable Co., Ltd., are installing machinery for manufacturing a full line of steel wire rope in their plant at Leaside, Ont. They expect to have this plant in operation by March 15th, 1919, and will then be in a position to supply all sizes and kinds of steel wire rope.

Brompton Company Had Good Year

For the year ending October 31st, the profits of the Brompton Pulp and Paper Co. Ltd., East Angus, Que., totalled \$1,051,274.00, as against \$1,073,562.00. After allowing for depreciation and interest, preferred and common dividend, a balance of \$287,274 remains, making with the previous balance a total of \$607,100. Mr. F. N. McCrea, M.P., the president, points out that during the year the Company was confronted with serious manufacturing difficulties, and under these conditions, the statement may be considered quite satisfactory. Referring to the purchase of the Odell Company of Groveton, Mr. McCrea states that the transaction gives the Brompton Company the most diversified output of any pulp and paper company in Canada.

Important Conference on Water Powers

At a conference in Ottawa recently between Provincial and Federal representatives of departments and public organizations concerned with water powers and their development, tentative plans were arrived at for co-ordinating methods of investigation, standardizing field and office methods, and arriving at a common scheme for indexing data with regard to Canadian resources in water powers so that facts and figures from all over the Dominion can be easily collated and made available for general use. It was also decided that Western representatives should meet once a year, and another meeting be held annually of Central and Eastern Canada representatives, with a meeting of representatives from the whole Dominion every two years.

Place War Tax On All Shipments

West Coast Lumbermen's Association Urges Such Legislation Regarding B. C. Manufactures

At the recent annual meeting of the shingle branch of the West Coast Lumbermen's Association, held in Seattle, Wash., a resolution was adopted urging legislation to require British Columbia shingle manufacturers and shippers to pay a war tax on shipments into the United States. This met with the approval of C. E. Merritt, a British Columbia shingle manufacturer, who said that he did not want to have the advantage of his competitors on this side of the line in that way, and did not think that any makers of Rite-Grade shingles in British Columbia desire this advantage.

A. Flavelle, of Port Moody, B.C., and C. E. Merritt, of Vancouver, were elected members of the Advisory Committee, and among the speakers at the gathering were R. D. Hyde, of Vancouver, and C. E. Merritt.

John McMaster, of Seattle, gave some facts about what the association had done. In 1916 it paid out \$38,000; in 1917, \$22,000, and in 1918, \$18,000, a total of \$78,000 for advertising. During the same period it paid out about \$2,650 for preparation of advertising. In 1916 it paid out for plan books, electros, etc. \$7,000; in 1917, \$1,000; in 1918, \$1,000, making a total of \$9,000. In its work in preventing the exclusion of shingles by building codes throughout the country, in its office work and so forth it has expended \$30,000. In the three years of its existence it has raised and paid out \$135,000. It has distributed 400,000 plan books, 150,000 pieces of other literature and given out 2,000 electros. It has planned shingle displays for association meetings and other places and has fought anti-shingle ordinances in sixty different cities having an annual consumption of shingles of 1,200 cars. It has arranged sixteen shingle exhibits at State and regional fairs. All of which, Mr. McMaster thought, spoke well for the activities of the organization during its brief young life.

In Washington there are 1,300 shingle machines, and only about one-third of these belong to the association. He declared the association should have about 80 per cent. of the shingle output of the north Coast; that would give an annual income of \$85,000, with which much could be accomplished.

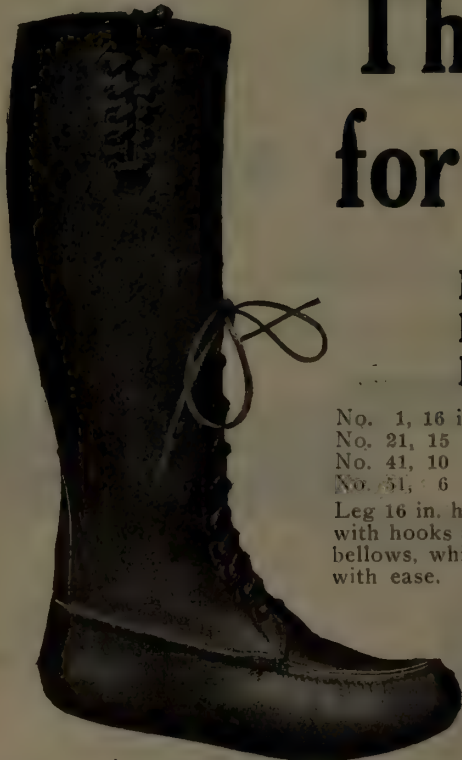

Secretary J. S. Williams presented his annual report, which outlined some of the work he hoped to accomplish. He said that 1918 was an eventful year for the shingle branch. By all the laws of precedent the Rite-Grade advertising campaign should have failed because of the decreased funds available for advertising last year. In spite of this, however, the shingle branch emerged into the new year with a greater prestige and with a distinct tendency of a number of new mills to investigate and come into the Rite-Grade movement and with the prospect of the rejuvenation of the industry for the current year. He said: "There is unanimous opinion that this is destined to be a big building year, but just how big it is going to be is going to depend upon us." Secretary Williams said that the Rite-Grade plan had proved fundamentally sound.

Percy Tyler made an address outlining the advantages of advertising. Referring to the shingle industry he pointed out that the approximate annual output of 7,500,000,000 shingles shows a decrease and indicated that something must be done to stimulate the consumption of shingles throughout the country. He attributed much of the decline in demand for shingles to the forging ahead of the manufacturers of substitutes because of their energy in advertising and up to date methods. They are well concentrated and are concerns that are strong financially and could spend much money in advertising that makes the public believe that there must be merit in their products. They could not have gained the foothold they have if one concern had owned all the shingle mills on the Pacific coast and had taken hold of things with a strong hand and by advertising and other modern methods had held and increased the shingle market. He thought it spoke well for the industry that its advertising has held up as well as it had during the last three trying years. During the next five years, he believes, a great increase in the market for Rite-Grade shingles will be brought about by proper advertising and exploiting of them. This he believes to be the psychological moment for advertising because the world knows the value of and appreciates advertising. He advocated the Rite-Grade advertising the present year to consist of, at least, six full pages in the Saturday Evening Post as well as using space in the leading lumber trade journals and several technical journals.

The annual meeting of the Millwork Cost Information Bureau will be held in Chicago on Wednesday, April 23.

Footwear for the Lumberman

That's the Boot You Want for River Driving

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with full particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

Ontario

J. A. Cody & Sons, Newmarket, Ont., are contemplating the erection of a sawmill at Manvers, Ont.

The Standard Chemical Iron and Lumber Company of Canada Ltd., with head office at Toronto, Ont., have been granted supplementary letters patent to change their name to the Standard Chemical Company Ltd.

The Georgian Bay Shook Mills, Limited, Midland, Ont.; McKinnon Industries, Limited, St. Catharines, Ont.; Marsh Engineering Works, Limited, Belleville, Ont.; and the Seaman, Kent Co., Limited, Meaford, Ont., will exhibit at the Lyons International Fair, France, in March next.

Edward Clark & Sons, Toronto, have removed from 509 Bank of Hamilton Bldg. to 807 and 809 in the same building, where they have very commodious quarters. The private offices of Edward Clark, A. E. Clark and W. A. Walker, accountant, are admirably arranged and most convenient.

According to a letter sent to all the municipalities of Ontario from the Department of Forests and Mines, the Government has now cut and ready for shipment 15,000 cords of wood in Algonquin Park. The wood consists of beech and maple and will be delivered for the cost on the cars.

E. P. Foley, of the Foley-Rieger Pulp and Paper Co., Thorold, has been elected President of the Board of Trade in that town, and Dan Daverin, who is the superintendent of the Montrose Division of the Provincial Paper Mills Co., has been elected Vice-President. The Board is arranging for the opening of suitable club rooms for returned soldiers in Thorold, and will also carry on an agitation for a new post office building.

The Matheson Lumber Company, Ltd., has been incorporated with capital stock of \$40,000, and head office at Matheson, Ont., to carry on business as manufacturers of and dealers in timber and lumber of all kinds; to own and operate sawmills, planing mills, lumber yards, etc. The chief parties interested are W. A. Gordon and F. A. Day, of Haileybury, Ont.

The John Carew Lumber Company, of Lindsay, Ont., have sent out an artistic calendar, entitled "The Path of Dreams." The effect is very pleasing and is a reproduction from an original painting of C. Ward Traver. A fair young girl is seen by the window and the soft cushion on the seat beside her suggests interesting possibilities and perhaps a subject for her maidenly meditation.

The T. E. Bissell Co. of Elora, Ont., will remove to Ingersoll, where they will be granted exemption from taxes for ten years and be provided with suitable premises for manufacturing purposes. The company manufacture farming implements. Another concern which will locate in Ingersoll is the Ingersoll File Co., formerly the Port Hope File Works, which will be given similar concessions. A by-law was recently carried by the ratepayers to secure the two new industries and carried by an almost unanimous vote.

The statement of production of the Abitibi Power & Paper Company of Iroquois Falls, Ont., for the three months ended December 31st, 1918, shows that in the period 16,884 tons of paper, 4,709 tons of sulphite pulp and 233 tons of ground wood pulp were produced. For the full year, newsprint production amounted to 67,402 tons, sulphite pulp 18,131 tons, and ground wood 12,433 tons. It is stated that the company's financial statement is now in course of preparation and will be ready in about a month's time. Results of the year are said to have been satisfactory.

Eastern Canada

The Gravel Lumber Company have obtained a charter with head office at Levis, P.Q.

Capt. Storm is contemplating the erection of a pulp and paper mill at St. Johns, Nfld., on Terra Nova River, at a cost of \$1,000,000.

The Nashwaak Pulp & Paper Company, St. John, N.B., are contemplating the erection of a pulp mill to cost \$400,000, at Marysville, N.S. The general manager of the company is N. M. Jones.

The Fletcher Pulp & Lumber Company Ltd., Sherbrooke, P.Q., are in the market for second-hand board matcher, an open back mailing machine and 1,500 feet of No. 6 weather-proof electric wire.

The office and some stock in the joinery room of the sash and door factory of H. Mathieu & Company, Clarke Street, Montreal, were destroyed by fire on January 9th. The damage was about \$5,000. The company are rebuilding.

The four-masted barquentine T. H. MacDonald was successfully launched at Meteghan, N.S., recently. She is one of the finest vessels built in Nova Scotia during the present shipbuilding season. She measured 220 feet over all and registers 1,088 net tons.

The Bonny River Lumber Co. Ltd. have been incorporated with head office at Bonny River, N.B., and capital stock of \$15,000, to carry on business as manufacturers of and dealers in timber, lumber, pulp wood and products of the forest. Among the incorporators are A. J. O'Connor, W. E. Golding and G. R. McKean of St. John.

Bock & Tetreau Ltd., have been incorporated with head office at Montreal, P.Q., and capital stock of \$40,000, to carry on business as manufacturers of wood, pulp and paper; to construct and operate sawmills and to carry on business as lumber merchants, etc. Among the incorporators are H. J. Tetreau, H. Bock and B. Benoit, of Montreal.

Price Bros. & Co. Ltd., 56 Peter St., Quebec, P.Q., are contemplating the erection of a pulp mill at Chicoutimi, at a cost of \$1,000,000. The president is Sir Wm. Price, Quebec, Engineer, Mr. Hardy, New York, and secretary-treasurer, H. E. Price, Quebec. The Chicoutimi Council has granted tax exemption for ten years to Price Bros. & Co., for the construction of the plant.

The Forest Protective Association Ltd. has been incorporated with head office at Quebec, P.Q., and capital stock of \$10,000, to exchange ideas

and consult as to the best methods of formulating, installing and operating a thoroughly efficient system to protect the forests in the province. The incorporators include W. Gerard Power, St. Pacome, Ellwood Wilson, Grand Mere, and R. P. Kernan of Quebec.

The Duffy-Blinn Co. Ltd., Saulnierville, N.S., have started work on a shipbuilding plant. The Master Builder is Jerry S. d'Etnremont, who will look after the erection of a workshop, which will be equipped with bandsaw and other machinery. The company's men are at present getting the timber, etc., from the woods. The first vessel built will be a "Fisherman" from a plan made by the Master Builder.

A deputation from Lt Tuque waited on Mr. W. A. Kingsland, assistant general manager of the Canadian National Railways, Montreal, and asked for an improved service between Montreal and La Tuque, advocating a more direct line. Mr. W. H. Churchill represented the Brown Corporation and Mr. G. MacLaren the Laurentide Co. It was stated that a direct service would benefit the lumber and pulp industries.

The Canada Pulp and Lumber Company have been granted letters aptent to do business in the province of Quebec, with head office at Montreal, P.Q., and capital stock of \$750,000. The new company will acquire by purchase, lease or otherwise, and own and operate sawmills, shingle mills, and lath mills, paper mills, pulp mills and generally carry on the business of lumber merchants and manufacturers in all branches thereof. Among those interested are J. R. Melancon, L. D. Clement and E. Ostigny, of Montreal.

The Resida Mining & Exploration Company Ltd., have been incorporated with head office at Montreal, P.Q., and capital stock of \$20,000, to carry on the business among other things of lumbermen in all branches and to manufacture, buy, sell and deal in timber, lumber, wood, pulp and paper, and to acquire by any title sawmills and other mills, factories, etc. Among those interested are A. R. McMaster, King's Council, of Westmount, and A. Angers, advocate, Outremont.

The net surplus profit of the Wayagamack Pulp and Paper Co., Ltd., of Three Rivers, amounted to \$544,036 in 1918, as compared with \$512,965 in 1917, the surplus representing earnings at a rate of a shade less than 11 per cent., against 10.3 per cent. the year before. The feature of the balance sheet is a large reduction in current liabilities and a decided improvement in the working capital position of the company as a result of the liquidation of all indebtedness to the banks. The directors' report notes that the improving facilities for shipping goods should materially assist in the development of the company's export trade.

Western Canada

The Cedar Mill Company, Hammond, B.C., have started work on improvements to their lumber mill. The general repairs and new machinery consist of additional power, new and larger boilers, No. 10 Berlin timber sizers, sticker, feed ripsaws, Underwriters' fire pumps, capacity 800 gallons per minute, etc.

The sawmill of the Jewell Lumber Co., Ltd., at Caithness, was totally destroyed by fire last month. The planing mill was saved, although only 16 feet away from the main building. The loss of about \$25,000 is partially covered by insurance.

The Village Bay Logging Company, Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000 to carry on business as loggers, foresters, timber merchants, and lumbermen; to manufacture and deal in lumber, logs, timber, etc.

The Abbotsford Lumber, Mining & Development Co. Ltd., has been incorporated with head office at Abbotsford, B. C., and capital stock of \$1,000,000, to import, export, sell, grow, and deal in saw logs, timber, lumber, shingles, wood pulp and paper of all kinds, etc.

The Nippon Trading Company Ltd., has been incorporated with head office at Victoria, B.C., and capital stock of \$500,000, to organize and carry on the business of importers and exporters of all kinds of general merchandise; to import and export and otherwise deal in lumber, wood pulp, etc.

Amar Singh Sanghe, of Coombs, B.C., one of the best known Hindu lumbermen in the province, died suddenly from the effects of influenza. Amar Singh Sanghe was the secretary and managing director of the Virginia Lumber Company which owns a large mill and other interests at Coombs.

L. L. Broadfoot is again in control of the Acme Timber Co. sawmill on the North Arm of the Fraser, near the foot of Ontario street, which has been idle since midsummer owing to financial troubles. The plant, which has a daily capacity of about 50,000 feet and is very well equipped, has started up again.

The Brooks-Bidlake Cedar Co., Ltd., Vancouver, is again operating its two shingle mills at Powell Lake, which closed when the embargo was placed on United States shingle shipments a few months ago. Bolts are being towed in cribs to the firm's shingle mill at Opal Harbor, Vancouver. The cedar mill at Powell Lake is at present shut down.

The Campbell River Lumber Company of White Rock, B.C., has just acquired the Carter timber on the west side of the Brown road, at Hopington, and is erecting spacious accommodation for the logging outfit. Chiefly cedar and fir, this is one of the finest blocks of timber in the section, where the Campbell River Lumber Company has been logging for several years.

The revenue from all timber resources in British Columbia for the month of December reached the highest figure ever known in the department of Lands, the amount being \$384,000. The return for November was \$282,000, while the estimate for the current fiscal year anticipated a return from all lumber resources of not less than \$2,000,000. Hon. T. D. Pattullo is hopeful that the estimated sum for the year will be exceeded by half a million dollars.

The Provincial Lumber Company has been incorporated with head office at Victoria, B.C., and capital stock of \$25,000, to acquire and take over all the right and interest of James Spencer Patterson under an agreement dated the 13th day of December, 1918, and made between the Beaver Lumber Company Ltd., whose registered office is in the city of New Westminster, of the one part, and the said James Spencer Patterson, of the other, part. The powers of the company include carrying business as general lumber and timber merchants, sawmill proprietors, shingle manufacturers, etc., and to deal in sawlogs, timber, lumber, shingle bolts, piles and wood of all kinds.

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue." According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

Proctor
DRYERS

For Exacting Conditions

Your individual problems of veneer drying may be different or the conditions more exacting. Because it is seldom that two drying problems are the same our engineers make a special study of your particular conditions, considering the relation of the drying to preceding and following operations, quantity to be dried, number of men employed, heat available, cost of power, etc.

Proctor Veneer Dryers give a perfectly flat and pliable product without checks or splits

LINK-BELT

FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed," we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show two types of Link-Belt here. Our catalogue shows many others. Send for a copy.

Dominion Belting is the "Proved Up" Lumber Mill Equipment

Over fifty years spent in making belts to meet the needs of individual branches of industry have given us an invaluable fund of knowledge.

As in other lines, we have worked out many of the transmission problems which confront the lumber mill man—we have determined to a scientific degree of exactness the requirements in each instance. And, further, we have developed Dominion Friction Surface Belting to a point where it gives a maximum pulley grip, the highest tensile strength and the greatest durability. We have attained this by the careful determination of fabric and rubber, the proper curing and the correct construction.

"Proving up" is a big feature of Dominion Friction Surface Belting—and every Dominion Belt sold to the lumber trade is a belt of the type that has stood up under the "proving up" test. This insures its quality, uniformity and its superiority for its particular purpose.

Dominion Friction Surface Belting for lumber mills—for all kinds of wood-working plants, no matter where located—is backed by the free special service department of the Dominion Rubber System. This technical service of belting experts is maintained to work out your belting problem, whether you are a customer or not.

If in your lumber mill you are experiencing transmission or conveyor belting troubles, write or phone our nearest branch and test our emergency service.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

BOND
DOUBLE-SURE
QUALITY

Bond Patent "Spiro" Compression Couplings

When the inner and outer shells of the "Spiro" Compression Coupling are drawn up over the tapered and spiral-slotted sleeve and bolted, every square inch of the inner surface of the sleeve comes in direct contact with the shaft.

The result is enormous gripping power—at least 50% greater than in any other type of compression coupling, as proven by practical and scientific tests.

This is one of the reasons why "Spiro" Compression Couplings are the make you should specify when your master mechanic or millwright says he wants the "best."

You will find "Spiro" Compression Couplings and our complete line of "Double-Sure" Transmission Equipment fully described and illustrated in our catalog No. 38-PA. A copy should be on your desk; you can secure it for the asking.

An economy too large to postpone

OBERVE the big part of every cord of wood wasted where wood is barked the old way. All your wood goes into pulp when you use the barking drum pictured above.

Write today for the figures

If your mill barks wood the old-fashioned way, let our engineer tell you the actual saving our method will accomplish in your mill. It will in no way obligate you to get the facts.

TWO of these men and our barking drum will release all the rest for other work. The annual saving reaches an astonishing figure. Labor is scarce. Investigate this short-cut.

Fibre Making Processes Inc., 440 South Dearborn St. **Chicago**

Now For the Utmost In Efficient Production

Industrial recovery demands the minimum waste of power. Power leakage may be generally traced to inefficient transmission. Are you getting the best possible service in this part of your plant?

Leviathan and Anaconda — Belting —

on your drives will insure you against loss of power in carriage. It will positively eliminate the menace of "stretch" and "slip" and can be adapted to your exact needs.

LEVIATHAN and ANACONDA Belting is the solution for every transmission problem and may be supplied for your specific requirements.

Let us demonstrate to you the advantages of LEVIATHAN and ANACONDA in your plant.

Ask for our monthly edition of "Main Facts", of interest to all users of belting.

Doing the thing that "Couldn't Be Done"

This Graton & Knight Spartan 24" double belt was installed in July, 1912, on a generator drive in the plant of the Bosch Magneto Co., Springfield, Mass. The extremely short pulley centers caused some belting men to throw up their hands and say, "It can't be done." But this Spartan Belt has been doing it successfully for more than six years. Now, note its low cost. At the purchase price per foot, the bill figures ninety-six cents per week or .004½ per delivered horsepower per week.

The above result, at so low a cost, is due to the Graton & Knight standardization—using the right belt for the work to be done, at a price that it ought to cost—no more and no less. Economy in belting means the longest and best service possible under given conditions. We make all kinds of leather belting for all uses—large or small.

The nature of the drive always governs the wear of any belt. Two belts of exactly the same quality on two different drives will make showings varying greatly in length of service. Using Graton & Knight Standardized Series Leather Belts means full delivery of power for every dollar invested.

The G. & K. Idea is economy through standardization. It means the right belt in the right place. For example, Spartan—the belt illustrated—is especially adapted for hard drives where pliability, strength and unusual frictional value are needed, high speed over small pulleys and where belts are subjected to the

action of water and atmospheric conditions. It may be that you are using too good a belt for some purposes and belts not good enough for another. Cost Equalization will spell Economy for you in capital letters.

One factor in the solution of your belting problems is the use of belting made from properly tanned leather. The hide of a steer is Nature's tough, elastic, resilient protection during years of activity. G. & K. tanning preserves all of those qualities. Nothing can really take the place of the matted fibre of leather which locks and unlocks in response to the demands of expansion and contraction, to the very end of its life.

It will save you money to let us recommend belts for every drive in your plant. Then, in buying, specify "Graton & Knight—Brand or equal." This does not commit you to buying our belts. It does put your buying on the one economical basis—that of the work to be done.

Write for booklet on "Standardization as Applied to Belting"

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

More Evidence of Duplex Supremacy

WHEREVER the Duplex 4-Wheel Drive Truck has competed in demonstrations against any other type of motor truck, the Duplex has conclusively substantiated our claims of superiority.

With the front wheels always pulling—and the rear wheels always pushing—the Duplex has the *truck power* to accomplish difficult hauling never attempted by any other type of truck.

The Mississippi Veneer Company's indorsement, reproduced upon this page, is but one of many unsolicited testimonials which we have received affirming Duplex supremacy in logging work.

Let us refer you to lumbermen in your locality who are operating Duplex trucks under most severe road and weather conditions. We'll gladly send you our lumber booklet which offers ample evidence of the Duplex truck's ability to do the unusual.

DUPLEX TRUCK COMPANY
2062 Washington Avenue LANSING, MICHIGAN

*With tire mileage greater—
And fuel consumption less—
Duplex cost per ton-mile is always lower.*

MISSISSIPPI VENEER COMPANY
MANUFACTURERS OF BOX VENEERS

SANDERSVILLE, Miss.

10/14/18.

Duplex Truck Co.,
Lansing, Mich.

Gentlemen:

We called on the Duplex Four Wheel Drive Truck and also a truck with two wheel drive only, to give us a demonstration on our logging.

The two wheel drive truck fell completely down, never bringing a load to the mill. The Duplex never lost a load.

On wet roads we have hauled as high as eleven hundred feet on the Duplex and after the demonstration purchased the Duplex and have same now in our logging service.

Yours truly,

Mississippi Veneer Company
W. B. Lusk
General Manager.

DUPLEX

**FOUR
WHEEL
DRIVE

STEAM FEEDS

Our Direct Acting Feeds are built in any desired size

This mark on your saw-mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

We have a 10 in. x 42 ft. Feed in stock for IMMEDIATE SHIPMENT

The above illustration gives a good general idea of our direct acting, or shot gun, steam feed, which we build in the following sizes: 8 in., 10 in., 11 in., 12 in., and 14 in. bore, or in any desired size.

The cylinders are made in 6 ft. sections, and are bored to exact diameter. The flange on cylinders are faced perfectly true, and finished to templates, so that each section is interchangeable. The flanges are also turned on the outside, which is a great convenience for levelling or lining the feed when placing same in mill.

The front cylinder head is our improved pattern.

The piston rod is made from double thickness, seamless steel tubing, of extra large diameter.

*Our illustrated catalogue contains full details.
A copy will be sent you on request.*

Sawmill Machinery

The Waterous Circular Resaw

This machine is specially designed for handling rough, knotty slabs or thick lumber indiscriminately. It is very heavy and substantial, and will give satisfactory service under the severest duty.

Besides being able to stand more hard usage than a Band Re-Saw, its first cost is considerably less, as is also the cost of maintenance. When used on slabs, the extra sawdust—in excess of that cut by a band re-saw—coming, as it does, out of the slab or waste portion, is unimportant, and thus the machine is practically as economical as a Band Re-Saw for this purpose.

One of our customers who uses a four-log gang, a circular, and one of these Waterous Re-Saws, states that the latter regularly handles 600 logs, each 16 feet in length, per day of eleven hours, besides all the slabs, which contain at least one board 3 inches wide and 6 feet long each, from 500 other logs. The 600 logs referred to are first sized by the circular into 6-inch squares by running them through to make two thick slabs and two thin ones, and then sent to the re-saw. If the log will not size to 6 inches square, the circular splits it into two thick slabs and sends the two slabs on to the re-saw. The timber that our customer is cutting is hard spruce, and is so hard that he informs us that he is obliged to change saws four times during the daily run of eleven hours.

Waterous

BRANTFORD, ONTARIO, CANADA

\$5,000,000.00
worth of mixed metal
sold annually.

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c. per lb.; West of Fort William, 68c., delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

Everything is in this machine that is desirable in a high speed Planer & Matcher. The Automatic Belt Release and Tighteners; the built-in Cutter Head Knife Jointers for both top and bottom heads; a system of Feed Roll Gearing where there are no chains and sprockets or immediate gears; quick and accurate adjusting and positive locking Matcher Legs; micrometer adjustment of Feed Rolls and Platen, are features that put the model 5 ahead of all competitors.

American No. 34-C Inside Moulder

The general design and form of construction of the frame; the direct and simple system of Gearing; the massive Bed Plate supporting the Matcher Legs; the Side Clamping Boxes quickly removable for change of heads; the accurately fitted and easy adjustments throughout, are all features that make this the most up-to-date inside moulder on the market to-day.

QUEBEC

LET SOMEONE ELSE TELL IT

Duke Johnston, Head of our Sales Department handed us the letter we reprint here with the suggestion that we use it in our next advertisement instead of doing all the talking ourselves. He says he has several such letters but as this one came in this morning we'll use it.

We admit we like to talk about our lumber every chance we get because we know it, we know it is well made and well graded, and we also know it is to our interest to ship lumber that will make you feel towards us the same as the customer who sent us this letter.

This tells how our customers appreciate the way we look after them when they place an order with us, and we are going right on giving that service and shipping that good quality lumber which prompted this letter and which has made so many good friends for us.

If you are not now a buyer of Union Lumber Company Lumber let us explain all about it by mail or by our traveller who will call at your convenience.

We Know We Can Satisfy You

UNION LUMBER COMPANY, LIMITED

HERE'S THE LETTER

Dear Sirs,

Your car G.T.R. 25289 has just been unloaded and I must let you know that this car of lumber is the best I think I ever received. I find it very satisfactory.

I want you to know that I appreciate the care you have taken in filling this order.

Thanking you

"Selling Pointers" for Retailers

—facts about roofing to hand on to your customers—facts that are based on the experience of years—facts that can be substantiated in every particular.

No material has ever been discovered or manufactured which meets the demand for roofing as does Red Cedar.

The modern Red Cedar Shingle, properly laid, provides an ideal roof for a lifetime—three layers of a perfect non-conducting, weather-defying, decay-resisting material.

Trademarked British Columbia Red Cedar Shingles are the best Shingles known to the trade—bar none. They are made from British Columbia Red Cedar—the finest quality in the world—according to grading rules which guarantee as perfect a roofing product as is known.

**BE SURE YOUR SHINGLES CARRY OUR
REGISTERED TRADE MARK**

Back up your "selling talk" with our booklets and literature on roofing—tells your customer just what he wants to know. Packages sent free on request.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

What Organization is Doing for Lumber Industry in Canada

These are epoch making days, not only in the history of the world, but in its varied activities and achievements. New conditions present new problems for solution and call forth the best thought, judgment and energy of the leaders in every line of industrial undertaking. The lumbermen of Canada have seen a vision and dreamed a dream that some day they hoped would be realized. Toward this end much was accomplished at the session of the Canadian Lumbermen's Association in St. John, N. B. Many progressive steps were taken and this national association, which has demonstrated its worth and efficiency in the past, will be of increasing usefulness and benefit in the future.

The great industry which has been one of Canada's leading operations, will continue to prosper in the days of peace, and in order to stabilize conditions and obtain a better grasp of production, sales and shipments, a statistical service will be instituted. This information will prove both timely and valuable to the members. Co-operation had reached such a high level that no longer does one manufacturer seek to conceal desirable data from another, but works with him in unity toward a common cause, all of which affords ample evidence of the broadening effect of association. Monthly statements of the amount of lumber cut, on hand, sold, and the figure obtained for the same, will present an index of what conditions prevail in the trade, and accordingly, will enable manufacturers to adjust supply and demand. There will be no groping in the dark, no speculative element, but a sound, firm basis of understanding that should prove both helpful and valuable to every member of the trade.

Another decisive move was calling for an accurate survey of all the standing timber in Canada, cut-over lands, facilities for transportation, etc., and asking the Federal and Provincial authorities to furnish adequate financial assistance for implementing this important project. Every mill takes an inventory of its stock and assets each year, and why should not the Nation, which, after all, is a great business institution, have some definite data regarding its resources. All guess work should be eliminated, and in these days when the export business is looming so large, Canada should be in a position to state definitely what she has, where she has it, how it can be supplied, when, etc. A step in this direction has already been made by New Brunswick, which province is to be congratulated on taking the initiative. If the other provinces will only follow, the great end sought will be attained.

Many other important phases of lumber activities were touched upon at the convention which will stand out as one of the most progressively managed and fruitful in results of any ever held. The membership has grown rapidly and as long as the Canadian Lumbermen's Association has for its aims and ideals, plans and purposes, such worthy propaganda as is being undertaken at the present, its success and future prosperity is assured. Every effort will be made to see that attention is given to the export business, which will be conducted through pre-war channels. Canada can supply the needs of Great Britain, and it is anticipated that as soon as the necessary ocean transportation facilities are afforded large orders will be placed with this country.

To become strong and enduring, progressive and permanent is the logical ambition of every organization, and that this zenith of hope is being reached by the Canadian Lumbermen's Association is demonstrated by the decision of the Eastern Spruce Manufacturers to join the ranks and become a live section of the parent body. It is probable that the white pine manufacturers will follow and create another section; thus the nucleus is formed for several branch bodies all working out their own individual problems and devoting particular attention to matters that immediately concern their respective angles of the industry, yet at the same time contributing their strength, influence and prestige to the weal and upbuild of the one great organization familiarly known as the Canadian Lumbermen's Association.

President Power sounded a high note of optimism and inspiration in his stirring address, and three or four points will bear emphasis. They are, that Canada to-day needs workers and not shirkers; that the lumberman will do his part in the great process of reconstruction; that there must be co-operation between all the lumber interests of the Dominion and those of our good friends on the other side; and that all factors in the trade should put their cards down on the table face up and play the game like men. That the president possesses splendid vision is evidenced by his prediction, that there is no valid reason why Canada should not in the next quarter of a century become one of the greatest and most outstanding countries in the world. He did not forget to add that it would mean work, service and co-operation on the part of every true, patriotic and alert Canadian. What higher ideal or better motive can inspire the average citizen than this trinity of attributes—work, service and co-operation.

Canadian Lumbermen's Association Annual

Splendid Convention Held in St. John—National Timber Survey—New Statistical Service—Twenty-one Directors Elected—Quebec City in 1920

The eleventh annual convention of the Canadian Lumbermen's Association, which took place in St. John, N. B., on Wednesday and Thursday, February 5th and 6th, was by unanimous accord declared to be the most successful and important gathering ever held in the annals of this national organization.

There are so many outstanding features, progressive moves and large undertakings as a result of the two days' session that no comprehensive survey can be presented in a brief introduction. Every part of the report of the committees, the wording of the resolutions, which were adopted, and the points brought out in the various addresses—all appearing on the following pages—are worth careful study. The convention struck a new high note in endeavor and achievement. It has become broadly national in character and representative of the most enlightened and aggressive interests of the great lumber industry of the Dominion.

The hospitality of the people of St. John and the lumbermen of that city needs no extended reference. Actions spoke louder than words and the tribute heard from the lips of the visitors must have been gratifying to even the modest members of the local committee who carried the arrangements through with such satisfaction and enthusiasm. Never has a welcome been accorded the lumbermen that equalled the reception tendered them at St. John and in saying this, one is putting the case rather strongly, for the Canadian Lumbermen's Association have been warmly greeted in other cities. St. John set a new pace and planted the flag pole a little higher up the heights of good fellowship and kindly interests than ever before.

The sessions were held in the assembly room of the St. John Board of Trade, and the head-quarters of the delegates was at the Royal Hotel. At the opening sederunt on Wednesday, February 5th, addresses of welcome were made by Mayor R. T. Hayes and R. B. Emerson, president of the Board of Trade. Both referred to the important lumber industry in New Brunswick and the high place which the manufacturers of wood products held in the esteem, progress and stability of the several communities. Mayor Hayes stated that in spite of the great quantities of lumber that have already been cut in New Brunswick there still remained large areas yet untouched and in the days before the war shipments had gone forward to many countries overseas. The prospects of the resumption of foreign trade were exceptionally bright. In the last year or two there had been a revival of the wooden shipbuilding industry, and one result was seen in the successful launching which the delegates had visited the previous day. Referring to the future Mayor Hayes felt convinced that in the reconstruction period the business men of the country would do their share and play their part nobly. Among the leaders in this would be the lumber manufacturers of Canada who represented the best and biggest men in every community. After touching upon recent developments in St. John, Mayor Hayes again bid the delegates welcome.

Birthplace of Canadian Lumber Industry.

President Emerson, of the Board of Trade, in his remarks, said it afforded him the greatest pleasure to welcome the members of the Canadian Lumbermen's Association to St. John, and in the course of an able review of the activities of the province said in part:

It is peculiarly fitting that an organization representative of the lumber interests of Canada, whose sphere of membership extends from ocean to ocean, and from the American frontier line to the Arctic circle, should come to St. John—to the Winter Port of Canada—to sit in convention and at the same time to observe what facilities the port possesses to handle such portions of the lumber traffic of Canada as may seek a passage through its portal.

St. John, I think it might fairly be claimed, if not the birthplace of the Canadian lumber industry, was at least one of the first to adopt it.

As early as 1783, when the United Empire Loyalists came to St. John to carve out of the wilderness homes for themselves, there were men here employed in the lumber business. No doubt our Loyalist forefathers recognized the great asset that they possessed in the forest wealth around them, and the history of St. John from that date to the present time has abundantly justified their foresight. It was the forest wealth of New Brunswick that helped to make St. John what she is, one of the finest and most progressive cities in Eastern Canada.

With the lumber cut of the province you are doubtless familiar. During the first year of the war there were shipped through this port overseas, in round numbers, 140,000,000 superficial feet of spruce deals,

4,500,000 superficial feet hardwood plank and 1,611 tons of birch timber. The game resources of the province yielded the provincial government in licenses over \$42,000 in 1917. Oil and natural gas form a very important provincial asset. In 1917 there were twenty-three producing wells in the province, the consumption of natural gas amounted to 743,000,000 cubic feet. In gypsum, the production in 1917 was 33,000 tons. In addition to these resources the province possesses promising deposits of antimony, tungsten, copper, manganese, fire clay, infusorial earth, iron and granite.

In conclusion, let me again on behalf of the board of trade, extend a welcome hand to your association. It is our hope and desire that as a result of the wise deliberations of this body and of a prudent conservation of the forest wealth of the province, the lumber industry will continue to grow and to prosper. Let me also express the hope that you may have a very successful and pleasant session of your body.

President Power suitably acknowledged the addresses of welcome and thanked the speakers for their kind references.

President Power Reviews Year's Work

W. Gerard Power, of St. Pacome, Que., President of the Canadian Lumbermen's Association, in an able and comprehensive address, before that body, at the St. John gathering said:

It gives me particular gratification to meet so many old friends, and some new ones, at this, the eleventh annual convention of the Canadian Lumbermen's Association.

The lumber trade of Canada has done its share in the World War during the past four years. It has been represented in all departments of the war machinery, from the private in the trenches to Major Generals. Some of the older lumbermen have lost their sons, and the trade has lost future lumbermen, and I am sure the deepest sympathy goes out to all who suffered through the terrible four years.

Now that the armistice is signed, and the final signing of peace is only a few months off, the lumbermen have another task before them, during the reconstruction and demobilization period, and members of the trade will not be found wanting, and will be the first to answer any call that may be made by their country, that will bring general prosperity.

All Restrictions Should Be Removed.

The trade has had its ups and downs during the four years, and at times it looked very dark for some of its branches, but now that conditions have changed, I certainly think that all restrictions should be removed and trade made free. This would lift the uncertainty felt in certain branches of the industry, would bring general prosperity to the trade, and to the country. The quicker this matter is definitely settled the better for all. This is no time to play a waiting game, and if action regarding restrictions is not settled at once, the trade may suffer, and if they do, the country will also feel the effect.

With these questions settled I am convinced that there is no reason for us to be worried as to the future. No one can doubt for a second, that the requirements of lumber for the United Kingdom and Europe will be enormous, and what is required now is to get the necessary machinery working in a free way, and get the question of tonnage settled.

The financial position of the various nations of the world has been very seriously changed, and we find the United States occupying a very strong position in this regard. I will not burden you with a mass of figures, but it is sufficient to say that notwithstanding all that has taken place, London must still be regarded as the world's financial centre, and the ability to pay on the part of the British Empire, has never been more forcibly brought forward than in the four years' struggle that Empire has gone through.

Heartiest Co-operation is Necessary Now.

Canada to-day is establishing credits for hundreds of millions of dollars, forty million dollars having been ear-marked for lumber alone. The discussion, which will follow, will show what part the Canadian Lumbermen's Association has had in connection with this matter, and I need not refer to it further at this time, only to say that at no time in Canada's history has it been so absolutely necessary that there

Aggressive Officers of Canadian Lumbermen's Association

W. Gerard Power, St. Pacome, P.Q.,
Re-elected President of the C.L.A.

D. McLachlin, Arnprior, Ont.,
Re-elected Vice-President of the C.L.A.

Frank Hawkins, Ottawa, Ont.,
Secretary of the C.L.A. since its inception

W. E. Bigwood, Toronto, Ont.,
Elected a director for three years

Gordon C. Edwards, Ottawa, Ont.,
Elected a director for three years

A. E. Clark, Toronto, Ont.,
Elected a Director for three years

Angus McLean, Bathurst, N.B.,
Elected a Director for three years

Alex. MacLaurin, Montreal, P.Q.,
Elected a Director for three years

Sir D. C. Cameron, Winnipeg, Man.,
Elected a Director for two years

should be the closest co-ordination and co-operation, not merely between the various commercial units, but there must be, if we are to realize our full destiny and safeguard the interests of those who come after us, the heartiest and most sympathetic co-operation between the various large industries of the country with Government agencies, and also with the so-called laboring classes. In your hands is a type-written reprint of an address, which was delivered by Mr. John H. Kirby, at the annual banquet of the National Wholesale Lumber Dealers' Association, New York City, in March last. This address is not intended as a reflection in any way on the regular trades unions. It is a warning to the workers of the country to beware of the insidious, and therefore, more dangerous Bolsheviki propaganda which seems now to be running riot throughout the world.

Workers and Not Shirkers are Needed

It is to be hoped that some resolution will be introduced during this Convention that will deal especially with this feature. Care should be exercised by the Government to see that only the proper kind of labor is allowed to come into this country. What Canada needs is workers, not shirkers, individuals who are able to earn their living with their hands and brains, not with their mouths. Efficiency and loyalty should be the passport admitting foreign labor into Canada.

There must be co-operation between the financial and the commercial and industrial interests. No longer will the individual interests be permitted to dictate or dominate; all must serve, and all must co-operate. Then too, there must be co-operation between industries in those countries which have been during the war, and still are, Allies. I make particular reference in this regard to the absolute necessity there is for co-operation between the lumber interests of Canada and those of our good friends on the other side of the line. Let us all determine to put our cards down on the table face up, and play the game like men.

There is one question that I would like to refer to before closing my address, and it is this: there is in the process of formation, an Eastern Spruce Association; I believe that this is in the direct line of progress, and it will prove to be of considerable benefit to those interests. If the Canadian Lumbermen's Association can be of service to the new Association, it will be our pleasure, as it is our privilege to do so.

The Value of Canada's Standing Timber.

Another point to which I would call particular attention of the operators and manufacturers, is that they do not appear so far to have sufficiently appreciated the value of their standing timber.

At a meeting of the National Lumber Manufacturers' Association, held in Chicago, November 23rd last, a very important resolution

which asks for an adequate appropriation for timber census, was adopted. I think we could not do better than adopt a similar course, and a resolution accordingly will be presented to you.

There was another resolution adopted at the above mentioned meeting which has a very important bearing on Canada, namely: reciprocal lumber duties requested.

The resolution can, of course, only apply to Canada, and no doubt it is our War Tax that is aimed at. At the same time it would be a calamity if the United States adopted a reciprocal duty in this regard. I refer to this matter in this way in order that it may be fully discussed.

It will be remembered that on April 15th, 1912, the Dominion Royal Commission was appointed, and the final report of their investigation in all parts of the British Empire was submitted to the British House of Commons in March, 1917. These recommendations will probably in a large part form the basis for future action, and lumbermen will undoubtedly be called upon to co-operate with the Government authorities in this regard. I would commend to our members a careful study of this final report which no doubt you will find on the files in your public libraries, or Boards of Trade.

Canada Able to Tackle Any Problem.

What Canada has done during the last four years was done under the stress of war, but it has shown to Canadians what a splendid country we have, and that there is no problem too big or too difficult that Canada may not undertake and solve. Canada's future was never brighter than at the present time, notwithstanding the fact that Canada has never had to face the problems in times past that now confront her. But the genius of her people has been demonstrated in a thousand ways, and given wise statesmanship which will harken to the advice of those experienced in the big commercial, industrial and agricultural affairs of the country, there need be no pessimism felt with regard to the ultimate destiny of this great Dominion.

In my view there is no reason why Canada should not become within the next twenty-five years, the greatest and most prosperous country in the world, but it will mean work, service and co-operation.

I cannot close without expressing my very keen appreciation of the loyal help I have received from the members of this Association during the time which it has been my privilege to occupy the position of president. I need hardly say that so far as in me lies, it will always give me pleasure to be of any assistance to the Association, or to any member, and I wish you all a most happy and prosperous year.

It was moved by Alex. MacLaurin, of Montreal, and seconded by Angus McLean, of Bathurst, N. B., that the address of President Power be adopted and printed for general distribution among the members of the Association. This was carried unanimously.

EXECUTIVE COMMITTEE AND ITS WORK DURING THE YEAR

The report of the Executive Committee of the C. L. A. was read by Walter M. Ross, of Ottawa, as follows:

On November 11th, 1918, an armistice was signed between the belligerent nations, terminating for the time being at any rate, the greatest war the world has ever seen. The transition from a war basis to a peace basis calls for the most earnest and enthusiastic service and co-operation on the part of everybody, and your Executive Committee, in laying down its reins of office, therefore bespeak for their successors, the most sympathetic and prompt assistance of every individual member.

There have been some very important points dealt with by your various committees during the past few months, and we therefore are dealing at considerable length with these matters.

On the 26th of November a meeting of your directors was called to be held at the Windsor Hotel, Montreal, at 10 a.m., the following being present:

Mr. W. Gerard Power, President, Messrs. Dan McLachlin, W. E. Bigwood, Gordon C. Edwards, Arthur H. Campbell, A. E. Craig, R. G. Cameron, P. C. Walker, W. C. Laidlaw, A. E. Clark, Geo. A. Grier, Jas. G. Cane, Wm. Thos. Mason, Duncan McLaren and Angus McLean.

That meeting showed that our Eastern friends had been in Ottawa engaged practically on the same work which we had been endeavoring to do, thus duplicating without material advantage to anyone, either to the lumber business or the Government, and it was felt by co-operating with the Canadian Lumbermen's Association our Eastern friends would be able to accomplish possibly better results, and sixteen firms in New Brunswick, Nova Scotia, and Quebec joined our ranks. Among the suggestions discussed at this meeting were the following:

1. Increased production of lumber desirable, so as to provide

employment for returned soldiers and munition workers released from their recent employment owing to the signing of the armistice.

2. That the Dominion Government be memorialized with a view to obtaining from the British Government restoration of the conditions so far as the export of lumber and timber is concerned, to pre-war conditions, also the question of ocean space and ocean freights thereon.

3. The proposed changes in Stop Off regulations, etc., etc.

Dealing with the subjects in this order a resolution was adopted that the President be authorized to co-operate with the Canadian Pulp and Paper Association and any other organization of the kind, regarding the re-establishment of returned soldiers to civil life in Canada, it being understood that any expense incurred in this work should be paid between the Provincial and Federal Governments.

It was resolved that the Secretary communicate with the Minister of Labor, urging that no definite action be taken relative to discharging alien labor until the exact condition of affairs is known, and until there is an available supply of efficient labor to take their places.

Your Association has co-operated with the Department of Labor in this regard, and there have been a number of interviews and considerable correspondence with the Minister of Labor as a result.

Export to Great Britain

In accordance with a resolution passed at the directors' meeting, representations were made to the then War Trade Board, and on December 2nd a cable was sent by that Board to London, stating our views, and asking if the British Timber Controller would permit importation from Canada. This resulted in a cable being received asking what quantities of lumber could be supplied per annum for export to Europe, giving the quantities that could be shipped

from Atlantic and Pacific ports respectively. To this we replied on December 10th, as follows:

Estimated lumber on hand Quebec and Maritime Provinces, spruce 1,000, pine 100, other woods 100; Ontario, pine 700, spruce 100, other woods 100; of which about one-third are in sizes usually exported to British market. Anticipated supply these Provinces next year 50 per cent. of foregoing. British Columbia estimated production of fir 25 monthly, aeroplane residue spruce on hand 16. Figures are millions of feet board measure."

The resolution which was finally presented to the Hon. Sir W. T. White, Minister of Finance, and Acting Prime Minister, and also to the Hon. Sir A. K. McLean, Acting Minister of Trade and Commerce, reads as follows:

Moved by W. C. Laidlaw, seconded by W. T. Mason:—

1. That Canadians demand a fair share of the trade created by the re-construction programme of Europe, as a right, for their share in the war.

2. That the repeal of war legislation be carried out as soon as possible, and the establishment of a substantial financial credit in Canada for the above purpose

3. That the lumber industry shall be adequately represented on any Export Commission that may be appointed by the Federal Government.

4. The Federal Government to arrange for export banking facilities.

5. That this resolution be submitted to the Hon. Sir W. T. White, Minister of Finance and Acting Prime Minister, to be cabled to the Right Honorable Sir Robert L. Borden, in England, which was unanimously concurred in.

As the result of these combined resolutions a long cable was transmitted to the Canadian Trade Commission here by Sir Robert L. Borden through the Canadian Trade Commission in London. For the information of members it may be stated that the former War Trade Board, and subsequently the Imperial Munitions Board went out of existence, and their places have been taken by the Canadian Trade Commission, the chairman of which is Sir Charles Gordon; with Messrs. C. B. McNaught and H. B. Thomas.

After many interviews a cable reply was sent January 10th, raising substantially the following questions:

1. Is all timber to be purchased for account Timber Controller by brokers and importers, and to be held as national stock and distributed under Controller's directions?

2. How and where will inspection be made and who will represent British purchasers here?

3. Procedure as to payments?

4. Your cable states timber controller's method is to ask all timber brokers in U. K. to purchase definite quantity Canadian timber.

5. What is meant by "Timber broker"? To whom will we furnish list Canadian producers, as intimated, and what information is required as to them and their products?

6. What procedure has Timber Controller in mind when he states he will guarantee every producer will be afforded opportunity of competing?

7. Presume shipping will be arranged for.

8. Understand usual channels pre-war timber business between U.K. and Canada largely conducted through established export firms. State specifically how new procedure will vary former methods, if at all.

9. Is it intention to depart from pre-war grades, thicknesses and widths as known to trade, and if so what will be accepted? Necessary to have fullest information promptly so that we can intelligently advise inquirers.

To the time of writing this report no further communication has been received from Canadian Trade Commission here, excepting that until British Government decide as to continuance of restrictions answers to these queries cannot be made.

Trade Acceptances

It will be remembered that this matter was taken up by this Association, and the reports received from the United States indicate that trade acceptances, so far as that country is concerned, have come to stay. The suggestion has been made that owing to the provisions of the Bank Act, whereby a debtor, knowing at the time that he is practically insolvent, may obtain goods on credit to be paid for by note, and in the event of his failure before maturity thereof, the bank lien can take the whole property, and the seller has no recourse but to rank, after all the banking indebtedness has been cleared off. After the endorsement, "The obligation of the acceptor hereof arises out of the purchase of the goods from the drawer" it read: "and it

is specifically agreed between all parties that ownership of the property governed by the within instrument, shall not pass from seller to buyer, until all the requirements hereof have been fulfilled," we think that this would fully protect sellers.

Side Cut From Aeroplane Spruce in United States

There have been many reports as to the quantity of spruce remaining after the aeroplane stock has been taken out, but no figures, even approximately, have been obtainable which could be regarded as being reliable. It is stated, however, that the United States Government has taken action in this matter and we understand an arrangement has recently been made by the President and a small committee of the National Wholesale Lumber Dealers' Association in New York City, whereby it is expected that an inventory of all spruce lumber in the Government's hands according to location, kind, grade and thickness, will be made, and that the lumber will be disposed of on a plan to be adopted by the Government Department in consultation with the National Lumber Dealers' Association, who will endeavor to dispose of this stock in such a way that it will avoid the demoralizing of the market, and at the same time preserve the Government from unnecessary loss. If it is deemed advisable, perhaps some member will feel disposed to move a resolution in connection with this matter.

Bankruptcy Act

At the last session of parliament the proposed Bank Act for the Dominion was introduced by Mr. S. W. Jacobs, M.P., but did not become law, owing to the fact that Parliament prorogued before it reached its third reading. It is altogether likely that the Bill will come up again next session. It is desirable that there should be some legislation of this character, and the Bill as finally submitted to the House is regarded as being fairly satisfactory. Of course revisions may be necessary from time to time as conditions may vary, but we think you should authorize the incoming Executive to deal with this matter, and a resolution has been prepared.

War Purchasing Commission

This Commission which was formed during the early stages of the war is to be continued as a permanent Federal Purchasing Commission. The intention is that purchasing officers of the various departments will continue to send out applications and receive tenders for supplies of all kinds. When these tenders have been received they will be passed upon by the Purchasing Agent, and then forwarded to the Dominion Purchasing Commission, who will decide finally as to where the order is to be placed. Mr. W. B. Bartram is Assistant Director of this Purchasing Commission, and will, we understand, have full charge of all lumber purchases for Dominion Government requirements.

Timber Limit Tariffs

As a matter of record the Province of Quebec adopted the following stumpage dues, which can come into effect at the beginning of 1918-19, and are as follows:

For the first five years, \$2.60, per thousand feet; second five years, \$3.00. Red pine, \$2.00 for 10 years; spruce, first five years, \$1.60, second five years, \$1.80; cedars, \$1.40 for ten years; cedar ties, 10 cents for ten years.

Beginning May, 1919, ground rents will be as follows:

\$6.50 for first five years, \$8.00 for second five years.

The above stabilizes the above tariffs for a period of ten years.

Membership

It is with great gratification that your Executive Committee announces the increase in our membership from 97 a year ago to 128 at the time this report is written. The problems which will follow as a result of the peace negotiations now pending, will call for the very best and ripest judgment that the lumbermen of the country can provide. We, therefore, urge upon each individual member his obligation and privilege in this regard. The question of giving information when called for, is one of the essential things, and it is to be distinctly understood that all information furnished to our Secretary is for the purpose of being consolidated, and will not be used in any respect for the personal advantage of any individual member. As an Association, therefore, we ought to pledge ourselves to this extent. The past experiences are ancient history, and serve no absolute criterion for future guidance. The new conditions must be met with new solutions. The future is ours to make or mar.

We desire to take this opportunity of thanking the Trade Press for the advance notices of our Convention here in St. John, and in this connection we would mention the following: Canada Lumberman and Wood Worker; New York Lumber Trade Journal; American Lumberman; Lumberman's Review.

On motion of Geo. W. Grier of Montreal, seconded by D. Champoux, of Pestigouche, Que., the report was adopted.

THE TRANSPORTATION COMMITTEE REVIEWS CONDITIONS

The report of the Transportation Committee was read by Walter C. Laidlaw, of Toronto, as follows:

During the year just closed there have not been any occasions when it has been necessary to appear officially before the Board of Railway Commissioners.

The period of readjustment, however, will require the constant and most careful attention of your incoming Transportation Committee, and we can only make a general statement in this report as to the conditions which exist to-day.

Ocean Freight

The British Government has not released spaces on ocean vessels for regular commercial purposes, excepting lumber to the extent of 15 per cent. of the available cargo space, and so far as the lumber and timber business is concerned the Timber Controller of Great Britain still controls. The transition from rates which have obtained during the war, back to anything like normal rates, will require the most careful and gradual changes in order to avoid chaotic conditions. While this primarily is a matter for the export trade to consider, the effect one way or the other will be felt by every lumberman in Canada. We, therefore, urge upon the incoming directors the advisability of appointing a very strong and active Transportation Committee for the coming year. The action of the United States Government at Washington in attempting to provide employment for the volume of tonnage which they have acquired and built under stress of war, produces a condition which is calculated to menace the British Mercantile Marine, if the latter is to be continued in use for the return of soldiers and war equipment to home lands. The proposition also on the part of the United States Government to wipe off a billion dollars from the war costs of the United States shipping, on an estimated valuation of three billion dollars, will be a tremendous help to American shipping in placing them in the forefront of keen competition as world's carriers. The recent reduction in existing freight rates from United States ports to ports in South America, Asia, Japan, Australia and Africa, amounted to from 25 per cent. to 30 per cent. A statement recently made indicated by the end of the year the United States had already, or in process of construction, some twenty-five million tons dead weight of ocean carriers. For comparison a statement in your hands, reprinted from the Montreal Gazette, January 11th, shows the sacrifice that Great Britain has made in order that the world war might be won. This Association has had correspondence placed before them from J. B. Eccleston, Special Lumber Representative, United States Shipping Board Emergency Fleet Corporation, Washington, D.C., offering to sell some of the American ships on advantageous terms to carry Canadian lumber.

Freight Rates

As you are aware the domestic and United States rates on lumber have been increased during the period of the war by 15 per cent., with a minimum of 1c. per hundred lbs., and subsequently by an additional 25 per cent. with a minimum of 5c. per hundred lbs. These advances were given in view of the assertion by the Canadian Railways that a bigger revenue was necessary in order to avoid going into the hands of the Receiver. As you all know the McAdoo wage scale has been applied to Canada, and it will be necessary to determine what action will be taken regarding the restoration of rates in existence prior to the war. Your attention is drawn to the fact that the above mentioned increases were authorized by the Board of Railway Commissioners as a war measure, and the onus of making application for a reduction from the current rates should not be on the shipping public, but should be determined by a notification from shippers that rates should be reduced. A resolution will be offered for your consideration, covering this matter.

Inter-switching

On the 26th day of October, General Order No. 252, File No. 6713, was issued by the Board of Railway Commissioners. The order is rather a long one, and we will not reproduce it here, but no doubt our members are fully appraised as to the new conditions.

New Railway Act

As you know the Railway Act, which has been under consideration since 1912, failed to be translated into law at the last Session of Parliament. We understand that the matter will be taken up again at the coming Session, and that practically the Act as it stood then will be adopted, and discussed by the Committees of the House and Senate. To fully cover this point we ask that you again reaffirm the resolution which has been passed by this Association covering this matter, on a number of occasions.

Owing to the fact that during the past year the Grand Trunk Pacific and the Canadian Northern Railways practically became Government owned roads it is desirable that all matters regarding freight rates and traffic regulations should be subject to the jurisdiction of the Board of Railway Commissioners.

Stop Off

At the moment of writing this report, intimation has been given to our Secretary, that the question of Stop Off is to be the subject of revision on the part of the Canadian Freight Association. A separate and full report will, therefore, be made covering this matter.

Value of Railway Lands

As a matter of record we desire to draw your attention to a review by Lord Shaughnessy, of the position of the Canadian Pacific Railway, published in the Montreal Gazette, May 2nd, 1918.

Lord Shaughnessy is reported to have said:

"To recapitulate, 14,000,000 acres of the original Canadian Pacific Land Grant have been sold to date, yielding in round figures \$94,000,000, or an average of \$6.72 per acre, but against this there were the expenditures during thirty years for immigration propaganda, agencies, commissions, and other expenses incident to sales, and the outlay for irrigation works, which made net return to the Company less than \$5.00 per acre. Naturally, the 4,300,000 acres that remain unsold will command much higher figures. In all this no account is taken of the vast sums spent by the Company in the construction of branch lines to open up the lands, nor of the tax on the Company's resources during the period required to bring to a productive basis these branch lines, which at the outset earned neither interest nor in most cases, operating expenses."

It is to be noticed that the arguments before the Board of Railway Commissioners, by your Association on Transportation Officials show that the figure estimated as the net result to the Canadian Pacific Railway on sales of land, was only 50c on acre, instead of nearly \$5.00 an acre.

On motion of J. Fraser Gregory of St. John, seconded by J. C. Bartram, of Ottawa, the report was adopted.

Secretary Presents Interesting Report

Frank Hawkins, of Ottawa, secretary of the Canadian Lumbermen's Association, presented an interesting report. It was as follows:

Time is of the essence of this meeting, therefore your secretary's report will be as brief as possible.

A year ago you passed a resolution looking toward the end of the Great War, since the Armistice was signed events have moved at a terrific pace, and a rule promulgated and adopted to-day, by to-morrow may be completely changed.

The Committee, consisting of the President, Vice-President, Mr. Dan McLachlin and Messrs. W. E. Bigwood, E. R. Bremner, and A. E. Clark, appointed to discuss any matters affecting the lumber trade with any official committee or other body that may be appointed for a similar purpose—the objects sought being the prevention of waste; the conservation of effort and of natural resources; the elimination of unnecessary conflict of interests, whether in production or distribution; and generally to promote natural and reciprocal relations which should have the object of achieving the greatest good for the greatest number.

As a result of a telegram from the Canadian War Mission of Washington and the Canadian War Mission in Ottawa, we were asked early in April last, to quote for lumber necessary to construct Army Cantonments in the Eastern United States. After giving the matter very careful consideration and the exchange of telegrams it was decided to ask Mr. Wm. Thos. Mason, of Montreal, to visit Washington and see what the prospects were of securing some of this business for Canadian Lumbermen. The result of Mr. Mason's visit is embodied in a report which he made to the President, on his return from Washington.

The recent increase in membership owing to many firms in New Brunswick and Nova Scotia joining is gratifying. Much benefit to the trade must undoubtedly result therefrom and when the formation of the Eastern Spruce Association shall have been definitely accomplished, no doubt satisfactory arrangements will be made whereby the two Associations can effectively co-operate.

A year ago your secretary suggested the organization of a Stat-

E. R. Bremner, Ottawa, Ont.
Elected Director for two years

Jas. G. Cane, Toronto, Ont.
Elected Director for one year

David Champoux, Restigouche, P.Q.,
Elected Director for two years

R. G. Cameron, Ottawa, Ont.
Hon. Treasurer, who has been made a Director

A. C. Manbert, Toronto, Ont., whose mission
Overseas was cordially approved

Hon. E. A. Smith, Shediac, N.B.,
One of principal speakers at annual banquet

istical Branch. Under conditions now existing it is most desirable that this matter should have your prompt and earnest attention and consideration. Small committees consisting of three members in different provinces, whose business it would be to induce their neighbors, as well as themselves, to send in to the secretary's office, at Ottawa, full particulars at regular stated intervals, regarding stocks on hand, quantities cut and shipped since the previous report, together with details as to operations in the woods, labor conditions, etc. Such information to be consolidated and then circulated among our members would prove to be of great value. It is hoped that a resolution will be offered by some member covering this subject.

Your attention is called to the booklet recently issued by this Association, giving the various items in which members deal. We have a limited supply of these which may be obtained from the secretary.

The period of merely marking time has passed—and we are ready for the order—"Forward."

It was moved by Angus McLean, of Bathurst, N. B., and seconded by A. E. Craig, of Toronto, that the report of the secretary be adopted.—Carried.

How the Membership Has Grown.

The present membership of the C. L. A. is 128, according to the report presented by R. G. Cameron, of Ottawa, who is Honorary Treasurer of the Association. Mr. Cameron, who was unable to be present, owing to illness in his family, showed a substantial balance on the right side of the ledger. On motion of Angus McLean and W.

T. Mason, the report of Honorary Treasurer (which was read by Mr. Hawkins) was adopted.

The present membership of the Association is made up as follows:

Ontario	64
Quebec	36
New Brunswick and Nova Scotia . . .	18
Manitoba, Alberta, Saskatchewan . . .	3
British Columbia	4
United States	3

—128

Wood boring insects were responsible for the loss to a Mississippi lumber company of more than a million feet of ash logs, according to reports of investigators of the Bureau of Entomology here recently. It was during the manufacturing operations to meet the war time demand for ash cars, ash handles and other supplies. The company had failed to provide for prompt utilization of the logs after the trees were cut, and the destructive ash-wood borers got busy in regiments and divisions.

A recent despatch from Fort William says that moose are dying in the woods from Spanish influenza is the assertion of men who have been engaged in bush work lately. One man ran across the bodies of two moose, lying not far apart, neither of which showed any sign of wounds or external injuries. Another bushman came up to a bull moose which was hardly able to travel from exhaustion.

LUMBERMEN CALL FOR ACTION ON MANY MATTERS

The Committee on Resolutions was composed of W. T. Mason, of Montreal; W. E. Bigwood, of Toronto; and E. R. Bremner, of Ottawa. The committee had a vast amount of work to do, but performed it expeditiously and all the resolutions presented through the chairman, W. T. Mason, were unanimously adopted. The resolutions follow:

An Accurate Inventory of Our Forests.

It was moved by W. E. Bigwood and seconded by W. Gerard Power:

Whereas, an accurate survey of all standing timber in Canada, showing the various kinds of lumber, the quality, location and accessibility, together with available means of transporting same to the nearest market—also a report of all cut-over lands which are suitable only for forest growth—with the extent and location of same, would be most valuable information, not only to lumber operators, but to the various Dominion and Provincial Governments, thus enabling said Governments to develop to the full extent a permanent forest policy which would have the effect of conserving the great natural resources contained in Canada's forests.

Be it therefore Resolved: that the Canadian Lumbermen's Association assembled in St. John, N. B., at its eleventh annual convention, urge upon the proper governmental authorities to provide adequate financial assistance, and clothe the Commission of Conservation with the necessary authority for the purpose of accomplishing the end in view.

Be it further Resolved: that the lumbermen of Canada pledge their assistance to the Commission of Conservation to this end, and that copies of this resolution be forwarded to the Prime Minister, and the Minister of the Interior of the Dominion Government, also the Minister of Lands and Forests of the various provinces, and to the Chairman of the Commission of Conservation.

Export of Lumber to Great Britain.

It was moved by W. E. Golding, of St. John, and seconded by H. C. Foy, of Quebec:

Having heard the report of the Executive Committee in connection with their actions during the past year, based on the resolutions adopted at the meeting of the Directors of this Association, held at the Windsor Hotel, Montreal, on Tuesday, November 26th, 1918;

Be it Resolved, that this eleventh annual convention of the Canadian Lumbermen's Association heartily concur in the course adopted by the Directors and Executive Committee, and that we place on record the view that in our opinion the export of lumber to Great Britain can best be accomplished by as prompt a return to pre-war conditions as possible.

Be it further Resolved, that a copy of this resolution be forwarded to the Prime Minister, the Minister of Finance and the Minister of Trade and Commerce, also to the Canadian Trade Commission at Ottawa.

All Railways Under the Dominion Commission.

It was moved by W. E. Golding, of St. John, and seconded by W. M. Smith, of Woodstock, N. B.:

Whereas, the Board of Railway Commissioners of Canada have jurisdiction over nearly all private owned railways in Canada and the efficiency of the fire protective measures of such railways has been largely increased by reason thereof; and whereas roads formerly known as the Canadian Government Railways have not been brought under the jurisdiction of the aforesaid Board, it is advisable that such Canadian national railways should be subject to the jurisdiction of such Board in all matters having to do with the safety of our forests, and should be subject to the same rules and regulations regarding the fighting of forest fire hazard as may be considered necessary by the said Board of Railway Commissioners, and whereas it is being realized more and more that the welfare of our country and the prosperity of some of our most important industries depend to a large extent upon the conservation of our forests, and particularly the reduction of the fire hazard by all reasonable means,

Be it Resolved: that this convention places itself strongly on record in favor of having all lines of Canadian national railways under the control of the Board of Railway Commissioners and of taking the necessary measures to bring this resolution to the attention of the Federal Government and to urge that the necessary legislation be prepared and brought before the next session of parliament to make the same effective.

Monthly Reports on Manufacture and Sales

It was moved by Angus McLean, of Bathurst, N.B., and seconded by W. E. Bigwood, of Toronto:—

That whereas there is to-day no sufficiently accurate informa-

tion existing as to the available supply of lumber (manufactured) on hand or to be cut, prices, costs, sales, etc., and whereas to accomplish the best aims of this association:

Be it resolved:—That all manufacturers in Canada be called upon to furnish as on a specific date (to be determined upon) the total board feet of lumber, showing what spruce, pine, etc., also lath and shingles on hand, unsold, as at a given date (to be determined upon) and a similar monthly statement thereafter, together with the amount in feet and value of sales during each month; that this information be sent to the secretary confidentially on forms to be furnished for the purpose and to be compiled by him in an aggregate statement to be sent to all the members of the association from month to month.

Securing Lumber Business from Great Britain

It was moved by David Champoux of Restigouche, Que., and seconded by A. C. Manbert, of Toronto:

That, whereas we learn that for reconstruction purposes in Europe the Allied governments propose to place an order for lumber, said to be approximately two billion feet:

Be it therefore resolved:—That this Canadian Lumbermen's Association, in annual convention assembled, appreciate the importance of using every possible effort in order to secure at an early date as possible this very important business for Canada,

Be it, therefore, resolved:—That a copy of this resolution be sent to the federal and to each of the provincial governments, as well as the reconstruction committee.

The Appointment of Mr. Manbert Endorsed

It was moved by Walter M. Ross, of Ottawa, and seconded by E. A. Dunlop, M.L.A., of Pembroke, Ont.:

That whereas the Canadian Lumbermen's Association learns with great satisfaction that the government of the Province of Ontario has agreed to the appointment of a nominee of the lumber trade in that province for the promotion of the best interests of the trade, and also learns with peculiar satisfaction that A. C. Manbert, of Toronto, a most highly esteemed member of this association, has been so nominated and has accepted this important office:—

Be it, therefore, resolved:—That the Canadian Lumbermen's Association, in annual meeting assembled, heartily concurs in this appointment and believes that, not only will the incumbent of the office fulfil its functions in a most thorough and satisfactory manner, so far as the province of Ontario is concerned, but that the lumber trade of the whole of Canada will be benefited by the acceptance of the contingent duties undertaken by Mr. Manbert,

Be it, therefore, resolved:—That we, as members, pledge our united assistance to Mr. Manbert and, further, place on record the approval of this association, and that a copy of this resolution be forwarded to the Honorable Minister of Lands, Forests and Mines of the Province of Ontario.

An Amendmetn to Railway Act Desired

The following resolution was also carried:—

Whereas, the officers of this association have experienced difficulty in furnishing tariffs, and the Canadian Freight Association have declined to accept blanket orders for all tariffs on lumber which may from time to time be issued by the Canadian Pacific, Grand Trunk Canadian Northern and the Grand Trunk Pacific Railways, thereby not giving the shipping public or their associations an opportunity of protesting the tariffs in the event of a protest being necessary, tariffs being only supplied on a direct and specific order by a tariff number.

Be it therefore resolved:—That it is the opinion of the Canadian Lumbermen's Association, assembled at its eleventh annual convention, that provision be made by special clause in the Act covering this point, and that the matter be left to the incoming committee on transportation to deal with at the proper time.

Be it further resolved:—That a copy of this resolution be forwarded to the Minister of Railways and Canals, and the Chairman of the Committees of the House and Senate.

All Freight Tariffs Under the Board

It was moved by James G. Cane, of Toronto, and seconded by Walter C. Laidlaw, of Toronto:—

Whereas, in the past the practice has been that freight rates and traffic regulations on railways owned or controlled by any government of Canada, have not been subject to the jurisdiction of the Board of Railway Commissioners for Canada,

Be it therefore resolved:—That the Canadian Lumbermen's Association, in annual meeting assembled, urge upon the Dominion Government the advisability of immediately introducing legislation

which will have the effect of placing the tariffs of freight rates and traffic regulations generally of every railway in Canada, under the jurisdiction of the Board of Railway Commissioners for Canada,

Be it further resolved:—That a copy of this resolution be forwarded to the Hon. Minister of Railways and Canals, and also to the Board of Railway Commissioners for Canada.

Proposed Amendment to the Railway Act

It was moved by Gordon C. Edwards of Ottawa and seconded by Walter M. Ross, of Ottawa:

"As intimated in the public press a consolidation or revision of the Railway Act is to be taken up when the present parliament re-assembles, the Canadian Lumbermen's Association in annual meeting assembled, confirms the course previously adopted in this matter, viz.:—

"That this Association co-operate with the Canadian Manufacturers' Association and endorse the resolution forwarded by the latter to the Minister of Railways and Canals, regarding the proposed amendment to the Railway Act, and that the matter be left to the Executive Committee of this Association to deal with."—Carried.

The submission on by your Transportation Committee at that time was as follows:

"Any special freight tariff of any transportation company (subject to its jurisdiction) which may hereafter be filed with the Board of Railway Commissioners, to which exception is taken by any person, company or other party interested, making formal protest, either before or after the effective date mentioned therein, against the adoption of said tariff, shall at the discretion of the Board be disallowed, until after such time as the Board shall determine, after hearing evidence produced for and against the adoption of such tariff. The Board may of its own volition, without protest or complaint on the part of others, disallow any such tariff, or any portion thereof, with or without hearing evidence in support of, or against same.

"In any special tariff the rates contained in which are increased, the burden of the proof,

(a) That old rates are inadequate, unsatisfactory or unworkable.

(b) That a larger freight revenue is requisite and necessary, and the reasons therefor:

Shall be on the transportation company or companies, or its or their representatives, filing such tariffs.

In addition to this a resolution passed by the Executive Committee of the Canadian Manufacturers' Association and submitted to the Minister of Railways and Canals, was approved. Following is the resolution:—

"Whereas the Railway Act gives the Board of Railway Commissioners power to disallow any tariff or any portion thereof, which it considers unjust or unreasonable, or contrary to any provisions of the Act, and to prescribe in lieu thereof other tolls in lieu of the tolls disallowed, only after the tariff complained of has actually come into effect;

And whereas, the Act provides no satisfactory method of avoiding the burden of an increased tariff until proved by actual experience that it was unreasonable, the burden of such proof being with the public;

And whereas, as no carrier is compelled to lower a tariff without a hearing, the public should not be compelled to suffer an increased burden without the same opportunity of being heard;

Be it resolved:—That the Honorable, the Minister of Railways and Canals, be asked to amend the Railway Act, so as to give authority to the Board of Railway Commissioners, either upon complaint, or upon its own motion, to suspend the operation of any tariff or regulation for sufficient time to permit of a full hearing, and afterwards to make such order as would be proper in a proceeding initiated after the tariff became effective; the burden of the proof to be on the carrier to show that the increased tariff or regulation is just or reasonable."

Be it further resolved:—That, in all statements furnished by the railways to the Government, freight operating expenses are to be shown separately from passenger and other expenses;

Be it further resolved:—That the Canadian Lumbermen's Association assembled at St. John, N.B., re-affirms the above statement, and that this Association join with the Canadian Manufacturers' Association, the various boards of trade, or other associations, and bodies throughout Canada, in endeavoring to have such legislation adopted as will accomplish the points outlined above.

Be it further resolved:—That the proper officers of this Association be authorized to appear before the Railway Committee of the House of Commons when the proposed act is brought forward, and present the views of this association thereat.

It is further resolved:—That a copy of this resolution be for-

warded to the Honorable Minister of Railways and Canals, also that a copy be sent to the Board of Railway Commissioners.—Carried.

Bankruptcy Act for the Whole Dominion

It was moved by E. A. Dunlop, M.L.A., of Pembroke, Ont., and seconded by Hon. George Gordon, of North Bay, Ont.:

Whereas, there is not to-day a Dominion Bankruptcy Act, it is expedient that such legislation should be introduced at the coming session of parliament, and translated into law.

Be it therefore resolved:—That the incoming executive committee be instructed to arrange for the President and Secretary of this association to appear before the Committee of the House, when the bill is being discussed at the coming session of Parliament.

Honorary Treasurer to be a Director

It was moved by D. McLachlan, of Arnprior, Ont., and seconded by A. E. Clark, of Toronto:—

The members of the Canadian Lumbermen's Association, in annual meeting assembled, desire to express their thanks to Mr. R. G. Cameron, for his highly valued services as Honorary Treasurer of the Association since its inception in 1908, and trust that Mr. Cameron will continue to give the benefit of his services to the Association.

Be it further resolved:—That as a permanent policy the honorary-treasurer of this Association shall be, ex-officio, a member of the Board of Directors.

Tribute to the Generosity of St. John

The following resolution, which was the last one submitted to the gathering, was carried by a standing vote and amid hearty cheers:—

That the hearty thanks of the officers and members of the C. L. A. be and are hereby tendered to the following people, associations and corporations who, by their kindness and thoughtfulness—and the entertainment furnished in such a bountiful manner have helped to make this, our eleventh annual meeting, one of the most successful ever held by the association:

The St. John's committee, the Mayor, the Union Club, the city press, the Imperial Theatre and Opera House managements; the citizens who so generously furnished automobiles, Mr. B. E. Norish, M. Sc., Supt. Publicity and Exhibits Bureau and Cleveland Tractor Co. for use of films; the Board of Trade, for use of rooms and attention shown our members; the Canadian Pacific Railway and the Atlantic Sugar Refinery.

Further, that the Secretary of the C. L. A. be instructed to forward a copy of this resolution to the parties referred to above.

Twenty-one Directors Are Appointed

The Canadian Lumbermen's Association now has twenty-one members on the Board of Directors and at the annual gathering in St. John the task of electing such a numerous body was no small undertaking. There were ten chosen from Ontario, six from Quebec, four from New Brunswick and Nova Scotia and one from Manitoba, Saskatchewan and British Columbia. Seven directors only will have to be appointed at each annual meeting henceforth. The seven who secured the highest vote in the contest are returned for a term of three years, the next seven for two years, and the remaining seven for one year. Thus seven will retire yearly. Much interest was aroused in the struggle there being a large number of nominations.

The motion to increase the number of directors was moved by W. E. Bigwood, of Toronto, and seconded by E. R. Bremner of Ottawa and carried, as follows:

Whereas, at the last annual meeting of the Canadian Lumbermen's Association, held in Montreal, on February 5th and 6th, 1918, notice was given that at this meeting a resolution would be introduced with reference to the appointment of directors of this association.

Be it therefore resolved:—That the number of directors be increased to 21, who shall be appointed for a period of three years, and in order to provide for continuity of policy seven directors shall retire each year. That the number of directors to be elected from each Province shall be based on the proportion which the number of members in such province bears to the total membership. That the precise method of accomplishing this result shall be left to the President to suggest.

Ballots were distributed and P. J. McGoldrick, of St. Pacome, P.Q., and H. D. Joyce, of Montreal, were appointed scrutineers.

How the Election Resulted

The following are the twenty-one directors elected:

Ontario, ten members, for three years—W. E. Bigwood, Toron-

to; Gordon C. Edwards, Ottawa; A. E. Clark, Toronto; W. M. Ross, Ottawa.

For two years—E. R. Bremner, Ottawa; Dan McLachlin, Arnprior; Walter C. Laidlaw, Toronto.

For one year—James G. Cane, Toronto; Duncan McLaren, Toronto; W. J. Bell, Sudbury.

Quebec, six members—

For three years—W. G. Power, St. Pacome; Alex. MacLaurin, Montreal.

For two years—George W. Grier, Montreal; David Champoux, Restigouche.

For one year—H. B. Poliwka, Quebec; W. T. Mason, Montreal.

New Brunswick and Nova Scotia, four members—

For three years—Angus McLean, Bathurst, N.B.

For two years—J. Fraser Gregory, St. John.

For one year—B. H. Dunfield, Halifax; Archibald Fraser, Edmundston.

Saskatchewan, Manitoba and British Columbia, one member—

For two years—Sir D. C. Cameron, Winnipeg.

The Old Officers are Returned

At a meeting of the new Board of Directors the old officers were re-elected for 1919, as follows:

President—W. Gerard Power, St. Pacome, Que.

Vice Presidents—Dan. McLachlin, Arnprior, Ont., Walter C. Laidlaw, Toronto, Ont.

Honorary-Treasurer—R. G. Cameron, Ottawa, Ont.

Secretary—Frank Hawkins, Ottawa, Ont.

Executive Committee — W. Gerard Power, Dan McLachlin, Walter M. Ross, E. R. Bremner and A. E. Clark.

Committees were appointed as follows:

Transportation, E. R. Bremner, chairman; Archibald Fraser, J. Fraser Gregory, B. H. Dunfield, W. Thomas Mason, A. E. Clark, and Gordon C. Edwards.

Legislation—W. C. Laidlaw, chairman, Alex. MacLaurin, D. Champoux, Angus McLean, J. Fraser Gregory, W. E. Bigwood and W. J. Bell.

Delegates to the National Wholesale Dealers' Association in Philadelphia in March—W. Gerard Power, Alex. MacLaurin and D. Champoux.

The Next Convention in Quebec

It was moved by J. C. Bartram, of Ottawa, and seconded by George J. Staton, of Quebec, that the 1920 convention of the Canadian Lumbermen's Association be held in the city of Quebec. The resolution was supported by H. C. Foy, of Quebec, D. Champoux, of Restigouche, and W. G. Power of St. Pacome, all of whom assured the visitors a cordial welcome on the occasion of the next annual gathering.

F. C. Beateay said that St. John would be pleased to welcome the delegates again next year and he assured them a hearty reception should they return. W. E. Golding also invited the lumbermen back to St. John in 1920.

It was, however, decided that the twelfth annual session should be held in Quebec in February next, the exact date to be decided by the directors, a number of whom praised in terms of high appreciation the splendid entertainment and hospitality of the lumbermen and citizens of St. John, which would never be forgotten.

EASTERN SPRUCE MANUFACTURERS COME INTO THE RANKS

One of the most important steps characteristic of the sessions at St. John, was the decision of the Eastern Spruce Manufacturers' Association to cast in their lot with the Canadian Lumbermen's Association, and become a trade section of that organization, to be known as the Eastern Spruce Manufacturers' Section. A well attended meeting was held at the Royal Hotel on Thursday, February 6th. In the absence of Sir Wm. Price, chairman, Angus McLean, of the Bathurst Lumber Company Ltd., Bathurst, N. B., vice-chairman, presided. The whole situation with regard to the future of the organization was reviewed. Several propositions were presented, but finally all were withdrawn in favor of one which was moved by W. Gerard Power, of St. Pacome, and seconded by O. G. Mahoney.

It was that "The Eastern Spruce Manufacturers Section of the Canadian Lumbermen's Association be formed to cover territory from Montreal east; that the members of this section shall be members of the parent organization, but that all expenses in connection with this section shall be borne by the members of this section."—Carried unanimously.

It was moved by D. J. Buckley, and seconded by J. W. Brankley, that this meeting confirm the action taken in Montreal with the exception that the organization be a section of the Canadian Lumbermen's Association.—Carried.

It was also adopted that the first requisite for membership be that the party applying must be a lumber manufacturer.

Mr. Ouellette having declined to act on the Executive Committee, it was moved by Alex. MacLaurin and D. J. Buckley, that he be replaced by David Champoux.—Carried.

At the request of Mr. MacLaurin the chairman appointed a new committee to draft a constitution and by-laws for the section, with the suggestion that the committee confer with Frank Hawkins, secretary of the parent organization. The new committee consists of the following: Sir William Price, Angus McLean, David Champoux, D. J. Buckley and W. Gerard Power.

The Executive Committee of the Eastern Spruce Manufacturers' Section of the Canadian Lumbermen's Association is now composed of the following:

New Brunswick:—Arch. Fraser, W. E. Golding, J. F. Gregory, Angus McLean, W. B. Snowball, W. H. Miller, F. C. Beateay.

Quebec:—D. Champoux, Alex. MacLaurin, Gerard Power, Sir Wm. Price.

Nova Scotia: Hon. C. W. Robinson, I. J. Soy, B. H. Dunfield.

As already stated it was decided to confine the membership to manufacturers. Of course, if a manufacturer does a wholesaling or exporting business as well he is entitled to belong to this new and progressive body.

The one requisite, however, is that he must be engaged in manufacturing, be it on a large or small scale. The organization takes in

spruce manufacturers in Quebec and the Maritime Provinces, and was formed in November last, at a gathering held at the Windsor Hotel, Montreal. The determination to throw in their lot and become an integral part of the Canadian Lumbermen's Association is regarded as a move in the right direction. The new section will have all the prestige, influence and strength of the Canadian Lumbermen's Association, and at the same time will manage its own affairs as a subsidiary body. S. B. Bond, of Bathurst, acted as secretary, and will likely continue to do so until definite arrangements are made for a permanent official.

The Statistical Department will be given special attention and the amount of lumber cut, sold, piled, etc., will be carefully tabulated. The figures will be available each month to the members and will also be forwarded to the head office of the Canadian Lumbermen's Association. Speaking as the president of the Canadian Lumbermen's Association, Mr. Power stated that other sections would likely be formed in the near future. He understood that the white pine manufacturers of Ontario were contemplating organizing and they would come in and form the white pine section of the Canadian Lumbermen's Association. Thus the strength and entity of the large body would be preserved and the various sections work under its jurisdiction. The Association would thus wield much influence as a whole yet would have its different departments, the same as the Canadian Pulp and Paper Association. That body embraced all branches of that trade, but has many sections working separately. These, however, labor in unison and harmony with the larger association. The action of the Eastern Spruce Manufacturers in becoming identified with the Canadian Lumbermen's Association is one of the most gratifying results of the recent gathering in St. John.

New Appointment for Mr. Thomas

The retirement of two members of the Labor Appeal Board, G. H. Duggan and Gustave Francq, both of Montreal, created vacancies which have now been filled by the appointment of H. L. Thomas, of J. R. Booth, Ottawa, and J. A. McLelland, vice-president of the International Association of Machinists, Montreal. Mr. Thomas was selected by the Canadian Manufacturers' Association to replace Mr. Duggan, and Mr. McLelland was chosen by the Allied Trades and Labor Congress to fill the vacancy caused by the retirement of Mr. Francq. The latter is now in England with Mr. P. M. Draper representing Canadian Labor in the peace negotiations. Mr. Duggan retired for private reasons.

The victory of "Bone Dry America," which the ratification of the constitutional prohibition amendment has brought about, could be made to mean a thousand miles of homes built of wood, according to a Chicago expert with figures. In other words, a row of frame cottages erected on fifty foot lots would stretch out that distance.

The Social Side of the Lumbermen's Gathering

Annual Banquet Was Brilliant Function and Marked by Splendid Addresses—The Importance of St. John as Great Winter Harbor

The annual banquet of the Canadian Lumbermen's Association held at the Union Club building, in St. John, was one of the most successful and distinctive ever conducted in the eleven years' history of the organization. There was abundant enthusiasm and many patriotic songs were sung, rollicking choruses rendered and stirring solos contributed, all of which were thoroughly enjoyed. The banquet committee was composed of J. Fraser Gregory, Fred C. Beattey, Wm. E. Golding, and Hugh MacKay of St. John, and they attended to all the details in an admirable manner. The decorations, both mural and tabular, were pleasing and effective, and the speeches were eloquent and instructive, being followed with the closest attention. The importance and development of St. John as a great winter ocean port, were emphasized, and the story of the progress of the harbor improvements told in a way that the visitors will not soon forget. All the speakers drove home many salient facts with regard to New Brunswick in general and St. John in particular, and spoke with confidence, optimism and assurance of the great future which awaits the sea-girt province and its chief commercial distributing and export centre—St. John.

W. Gerard Power, President of the C. L. A., ably presided, and the principal speakers were Hon. Wm. Pugsley, Lieutenant-Governor of New Brunswick, Hon. W. E. Foster, Prime Minister of the Province; Hon. E. A. Smith, Minister of Lands and Mines, Mayor R. T. Hayes and Hon. Clifford W. Robinson of Moncton. Among those who contributed most acceptably to the vocal entertainment of the evening were George J. Staton of Quebec, Secretary Frank Hawkins, of Ottawa, and local talent including several artists from the opera house. After ample justice had been done to the excellent menu, President Power opened the proceedings. He said that it was a great privilege to see so many old and new faces and he felt honored to preside over such a gathering. He spoke appreciatively of the forest policy of New Brunswick and said "I think the resolution we passed to-day will have great effect in lining up the other provinces in favor of conservation. We have been greatly impressed with St. John's hospitality, for right royal has been our welcome."

The Eastern Gateway of Canada.

President Power then introduced Lieutenant-Governor Pugsley, as one of the greatest debaters who ever sat in the house of commons.

Lieut.-Governor Pugsley in his preliminary remarks said he regretted the president had given his hearers that disappointment. It was a long time since the speaker had made a speech and he was afraid he would disappoint. He was not sure but that the lieutenant-governor should speak only when his advisers wrote something for him. While we had monarchical institutions in this country there is no country in the world in which the institutions are so democratic and the people have so much power as in Canada. It was a great pleasure to him to be present with so many of the great men of the country. It was a great industry they were carrying on and it required great skill and care to conduct their business.

"We feel honored to have you in the city," Lieut.-Governor Pugsley continued, "and we hope the time will come when you will come again. I am afraid you will get tired hearing about St. John, but I have been asked to speak about the city."

After telling of the early struggles of St. John which had strong competition from Portland, Me., years ago, the Lieut.-Governor presented a convincing array of figures showing distances from Montreal to St. John and other ports and a remarkable expansion of trade.

Montreal to St. John by Canadian Pacific Railway, 480 miles; thence to Halifax, by Intercolonial, 275 miles, or a total distance to Halifax of 725 miles, as against 480 miles to St. John, the difference in favor of St. John of 275 miles.

Taking Quebec as a common point for transportation entirely by the Intercolonial railway, the distance from Quebec to St. John is 570 miles, while from Quebec to Halifax it is 666.5 miles, or a difference in favor of St. John of 96.3 miles.

The exports of St. John last year, he said amounted to \$200,783,647 and in the year previous, to \$190,586,561, while the imports in 1918 were \$16,787,200 and in 1917, \$15,500,659. St. John was the eastern gateway of Canada, that was never closed and was the second greatest port in the Dominion, being surpassed only by Montreal. The city was the eastern terminus of the Canadian Pacific railway and terminal

of the Canadian National Railways, and was enjoying prosperity and growing national significance.

The Chief Industry is Lumbering.

Hon. W. E. Foster said, "I consider it a compliment to the government that you should invite me here as a representative of the people. As an amateur politician I am inclined to think most of the applause did not come from the New Brunswick lumbermen, but from the visitors. I might say I have never been invited to a meeting of the New Brunswick lumbermen. The fact that you are meeting in New Brunswick is an indication that you are progressing as you have come to the heart of the lumber industry of the maritime provinces. We are a very small province of 28,000 square miles, and the lumber industry is one of the chief industries of the people. The lumber industry," he continued, "purchased the largest amount of supplies and employed the most men and maintained many communities." He had always favored separating, as far as possible, the crown lands from politics and politicians. When called on to form a government, he asked the lieutenant-governor to select Hon. E. A. Smith, whom he felt would carry on the affairs of the crown lands department in a fair and impartial manner. The people would probably have the opportunity in good time of declaring whether he was wise in his selection or otherwise. At the last session of the legislature a forestry act was passed, providing for an advisory board, on which is represented lumbermen and lessees of crown lands. The minister has made an honest effort to carry on the work of his department to the interest of the lumbermen as well as of the government. Premier Foster referred briefly to the noble acts of the young men who went overseas, and praised the work of the women of the province during the trying war times.

The Preservation of Standing Timber.

Hon. Dr. Smith, introduced by President Power as a man who had done more to preserve standing timber than any other man in Canada, was given a cordial reception. Hon. Dr. Smith spoke briefly of the responsibility of conserving forest lands. France had conserved her forest for many years, and was able to supply her own army and the British army with necessary lumber. There were 12,000,000 acres of forest lands in New Brunswick, of which 7,000,000 were the property of the crown, but 2,000,000 acres were unproductive because of forest fires. Steps had been taken by the provincial government forestry advisory board to secure protection. They had a permanent forestry service of fifty rangers and inspectors, who protect the lands and scale the lumber. They are taken six months in probationary service before they are permanently appointed. During certain seasons temporary men are employed to assist the game wardens and fire rangers. Permits were necessary for fires built in or near forests. There was also a plan to burn slash and safeguards against railroad fires have been taken. A total of 850 fires were extinguished by the patrols in 1918. The railway fires numbered 788, and 637 acres had been burned over in that year. Fishermen, hunters, picnic parties and campers caused a fire loss of \$39,000. The total fire damage was \$72,000. It was noticeable that most of the campers and fishermen's fires occurred on or near holidays.

Hon. Dr. Smith told of the work being done to make an inventory of all forest lands by survey. Those applying for land to cultivate must take their land where it is adapted for agricultural purposes. He believed the day was not far distant when the Government must take over some of the abandoned farms and allow them to grow up in trees. The department expected to employ forest engineers now coming from overseas, and hoped to have Dr. Howe, a well known expert, come to the province next summer to assist the Government. There would be an enormous demand in Europe for lumber, but we must be careful not to exhaust our forest wealth which should be sustained for the benefit of posterity.

Hon. Clifford W. Robinson expressed the belief that the gathering would do much good not only here, but all over Canada. While all admired St. John they should remember that St. John was not the whole of New Brunswick. Moncton was a city of nearly 20,000, and growing rapidly.

Mayor Hayes said the Maritime Provinces were proud of the sacrifices Canadian men had made and the work the women had done in the war. He referred to the many men the provinces had sent

The visiting delegates drawn up in line before the winter port at West St. John, N. B.

out to colleges in the Upper Provinces and the United States, and, to those from the east who figured in the politics of Great Britain and Canada.

The banquet closed by the singing of Auld Lang Syne and the National Anthem.

"Bread and Cheese" Supper was Enjoyed

On the evening previous to the annual banquet, there was a delightful party at the Imperial Theatre, which is a commodious and most inviting playhouse. The visitors were warmly welcomed and some special lumbering pictures, taken by the Dominion Forestry branch of the Department of the Interior, were shown on the screen. The importance of conserving the wooded wealth of the Dominion was strongly presented and also the necessity of adopting every precaution against the outbreak of fires. Other pictures revealing the ship building activities of the Pacific Coast were displayed and aroused much interest.

After the entertainment the guests adjourned to Bond's restaurant. The proceedings were quite informal and stirring vocal selections were contributed by George J. Staton, of Quebec, Frank Hawkins, of Ottawa, F. C. Baker, of Sherbrooke, and others, who were called upon again and again to come forward, and they obligingly complied. These gentlemen deserve more than a passing word of praise for their efforts and ability in making the evening one of memorable associations. Walter M. Ross, of Ottawa, contributed a reading.

The only other feature of the impromptu programme was a rousing address from A. C. Manbert, of Toronto, who has been named as the representative of the Ontario lumber manufactures to visit the Old Country in the interest of the expansion of the timber trade of the province. Mr. Manbert told of the purpose of his visit abroad and asked for the support and co-operation of the industry. He outlined the importance of the work and the character of his mission and what he hoped to accomplish through the sympathy and assistance of the trade in Ontario. The future was unknown, but he would endeavor to play his part and do all that was in his power to make known the merit and worth of the forest resources of the province and conduct such a campaign in interest of the industry as would justify the confidence which had been reposed in him. Mr. Manbert stated that he went with a free hand and while overseas would follow the wisest course that his judgment dictated, and devote whatever knowledge, ability and insight he possessed to the great task that he was undertaking. He was given a most cordial reception and the verdict expressed by those present, after listening to Mr. Manbert, was that the right man had been nominated for the mission on which he will shortly embark.

The Noon Day Luncheon was Finale

The luncheon tendered the delegates at the Union Club on Thursday, February 6, by the local committee of lumbermen was a fitting closing function of the two days' proceedings, and a most tempting repast was served. J. Fraser Gregory, of St. John, presided, and took occasion to tell the members of the company how pleased the lumbermen of New Brunswick were to see the convention held in the east. He hoped they would take away with them many pleasant recollections and impressions of their visit. In years gone by the C. L. A. had been sectional rather than national in character, but the gathering in St. John would do much to strengthen the ties of the east with the west, and impart to the organization a broader and wider nature in its scope and operations. All had seen the transportation facilities of the city and its important port, of which the citizens were justly proud. Lumber was shipped from St. John to all countries in the world and it was no unusual sight to see one of the leviathans in the berths at West St. John, loading five or six million feet of deals for export. There was employment for all in the city during the entire winter season as the men, who worked in the saw

mills and lumber yards in the summer, found steady positions around the docks and ocean going vessels in the winter. The advantages and importance of St. John as a winter port were bound to increase, and so great would be the progress of the Maritime Provinces that, in the years to come, it would be found that St. John and Halifax would not be sufficient, but that other gateways would have to be opened up. The one thing which the city mostly needed was a large modern hotel, and this he felt would come in the near future.

A. E. Clark, of Toronto, referred to the excellent accommodation that had been given the visitors at the Royal Hotel and said that it was he, who had moved at the Executive meeting in Montreal last fall, that the 1919 convention of the C. L. A. should be held in St. John. He felt sure that all were pleased that they had come east, as the hospitality of the citizens and the local lumbermen had been unbounded and the convention the best ever conducted in the history of the organization. The Canadian Lumbermen's Association was national in character and stood for fair dealing and doing the best for all, whether manufacturer, wholesaler or exporter. He was gratified at its recent rapid growth and the interest that had been taken in it by the men of the east who had joined in such large numbers. He believed that the C. L. A. would continue increasing in strength and influence.

Other addresses were made by Col. W. J. Ray, of Quebec, Spencer Kellogg, of Utica, N. Y., on behalf of the American visitors, W. E. Golding, of St. John, and Manager Seidensticker, of the Atlantic Sugar Refinery, which plant was visited by many of the delegates and afforded an interesting revelation.

Some Breezy Notes on the "Big Meet"

President Power is a model presiding officer. He keeps things on the move, and the business of the various sessions was directed so that nothing was allowed to drag or become dreary. The discussion was pithy and pointed and much work was done in a remarkably short time.

The committee which did its work so energetically and upon whom the success of the splendid local arrangements at St. John largely depended was composed of J. Fraser Gregory (Murray & Gregory) chairman; F. C. Beateay (Stetson, Cutler & Co.); Hugh McKay (Malcolm McKay Ltd.); W. E. Golding (Geo. McKean & Co.); W. E. Gunter (Murray & Gregory).

One of the events that will stand out long in the minds of those who had the pleasure of taking part was the visit to the Atlantic Sugar Refinery, where the guests were conducted through every department. The plant is a magnificent one and a million pounds of sugar are refined daily.

An excursion in mid-winter is also a novel experience for the majority of Ontario and Quebec people, yet on the afternoon of Thursday, February 6th, the big tow boat Helena made a tour of the harbor, including the Reversing Falls, West Side and Partridge Islands. The crew of the Helena gave a demonstration of her fire fighting capabilities, throwing a powerful stream from the bow. The lumbermen who were the guests of Mr. Grout, of the C. P. R., decreed that he was a jolly good fellow. The harbor mariners returned from their voyage thoroughly convinced of the great advantages of St. John as a winter port.

The visitors had the pleasure of witnessing the launching of the four masted schooner "Randfontein," from the shipyard of the Marine Construction Company. It was a side launching and the vessel took the waters without mishap or delay of any kind. The launching was directed by D. H. Saker and J. M. Densmore. Rousing cheers were heard as the ship struck the water. The keel of the "Randfontein" was laid on July 1st, so that the vessel has been launched within seven months and four days. She measures 204 feet length of keel and 230

feet over all. Her beam is 37 feet 6 inches, and moulded depth of hold 18 feet. The dead weight tonnage is 2,200 tons. The vessel's framework is of black Bay Shore spruce with flooring of hardwood. The schooner is a double decker and will have an estimated speed of eight knots an hour. She is rated A1 13 years.

On the arrival of the visitors the first day they were taken for automobile rides around the city and over to the winter port, where they were photographed in a body and inspected several ocean liners lying at their berths.

The thanks of the convention are due to the Dunlop Tire and Rubber Goods Company for the donation of several boxes of choice Havanas. Smoking was permitted during the business sessions and full advantage was taken of the liberty.

The courtesies of the Union Club were extended to the lumbermen during the stay in the seaport city and the St. Andrew's Curling club also sent a pressing invitation to any lovers of the roarin' game to try their hand on the keen ice.

P. J. McGoldrick, of St. Pacome, P. Q., and H. D. Joyce, of Montreal, who were the scrutineers and had to count all those ballots for the new Board of 21 directors, certainly had their work cut out for them. They were accorded a hearty vote of thanks.

If Geo. J. Staton, of Dobell Beckett & Company, of Quebec, should lose his "pep" as a lumberman, or F. C. Baker, of the Devon Lumber Company, Sherbrooke should forget all he knew about marketing wood products, or Frank Hawkins, of Ottawa, should become inefficient as an official of the Canadian Lumbermen's Association, they could all earn a comfortable living by the vocal art. The songs of these gentlemen were ever welcome and did much to enliven the proceedings at the various social functions of the Canadian Lumbermen's Association.

E. D. Hardy, of the Canadian Lumbermen's Insurance Exchange, Ottawa, delivered a stirring address on the advantages of mutual insurance and inter-insurance companies. He stated that the C.L.I.E. was an organization designed to meet the demands of Canadian lumbermen for insurance facilities that is under its control. It was founded for lumbermen, operated by them and its membership confined exclusively to lumbering ranks. The sole object of the exchange was the mutual protection of its members. During the past year the receipts were in the neighborhood of \$30,000, and the loss around \$100. Mr. Hardy asked for the co-operation of the association members and explained the supervision and management, the class of risks insured, the form of contract, the security to policy holders, the inspection service, the basis of rate, etc. In closing he said the purpose of the organization was to provide a means by which the lumbermen can secure protection against fires at actual cost in an association subject to Canadian Government regulations and approved by the Dominion's Insurance Department. Mr. Hardy's address was well received.

W. W. Schupner, New York, of the National Wholesale Lumber Dealers' Association, was one of the most welcome visitors at the gathering. His address on the Trade Acceptance, its advantages and use, was most instructive, and he also told how the U. S. was doing very much to stabilize conditions following the signing of the armistice. To furnish some valuable information regarding the lumber situation across the border, the government, he said, after the war found itself with 500,000,000 feet on its hands. If this lumber had been dumped on the market there would have been heavy losses in the trade, especially in the pine and hard wood industries. Numerous conferences were held by the lumbermen and government officials with the result that an order was sent out prohibiting the immediate sale of this lumber. The Southern Pine men took over the pine and will contract with the government on a commission basis, all sales to be made under that system. The lumber now in stock will be disposed of during a period of six months, but after that period the government will take over any stocks on hand.

Thus any ill-effects of dumping it on the market have been overcome. Hardwood and spruce will be handled in a similar manner.

President Power said that this information was very valuable, and a vote of thanks was tendered Mr. Schupner.

One of the outstanding features of the great gathering was a resolution calling for the survey of all standing lumber in Canada, cut over lands and facilities for transportation.

A circular letter from the Great War Veterans relating to the treatment of returned soldiers by employers was read and heartily applauded. The letter referred to the fact that many returned men are not in perfect physical condition, due to injuries, gassing and shell shocks and that they should be treated with every consideration. The success or failure of the men when they are re-employed rests with the employers, declared the letter.

Mr. A. C. Manbert was heartily congratulated upon his appointment as overseas representative of the Ontario manufacturers and a vote of confidence in him was passed.

Retail Lumbermen Assemble in Convention

In Annual Gathering Ontario Dealers Adopt Progressive Measures and Receive Gratifying Reports from Every Department—Important Issues

While the Canadian Lumberman's Association constitutes in its membership manufacturers, exporters and wholesalers, there is another organization which operates no less successfully and aggressively for the retail lumber merchant, and that is the Ontario body, known as the O.R.L.D.A., which was organized a year ago. What it has accomplished and what it hopes to consummate are outlined in a report of the proceedings which will be found in another column. The association has been wonderfully progressive and will during the coming year do still greater things.

Never was the retail lumbermen in a better position than he is to-day. The war, while it has brought distress and disaster, sorrow and suffering, has also ushered in unexampled prosperity for the wage earner. The objective of every healthy minded, ambitious man and woman is a home, as it is a positive preventative against future want. As such it makes a powerful appeal to the wage earner. If constructive, timely and attractive advertising is done by the average retailer and he will present the home building proposition fairly and logically, he cannot fail to reap great benefits from the publicity. The time to get to work on this idea of building a home is now, and with confidence, co-operation and persuasive propaganda, building operations in every habitable centre should receive an impetus that will result in a splendid turnover for the man who supplies the goods.

The first annual convention of the Ontario Retail Lumber Dealers' Association, which was held at the King Edward hotel, Toronto, on Tuesday, February 11th, revealed a story of achievement and unity, cooperation and progress that was most gratifying to the delegates and augurs the continued advancement and welfare of the trade.

The attendance was large and representative of all parts of the province, about one hundred and twenty members being present and taking an active part in the important proceedings, which were characterized by harmony and enthusiasm. The various reports presented were comprehensive and satisfactory and set forth in detail what this virile and aggressive organization has accomplished within the last twelve months. Its great success stands out as a landmark in association work which should continue to develop and prove of increasing value and benefit to the exponents of the trade. The officers have been faithful and diligent in the discharge of their duties and their efforts have met with the appreciation of the members to such a degree that they were all returned for another term to carry on effectively and unitedly the activities so auspiciously inaugurated just a year ago.

President Thomas Patterson, of Hamilton, presided. The various reports presented were followed with the closest interest and heartily endorsed. It was decided that the next annual conclave be held in Hamilton, in February, to which city a sincere invitation was extended. The visitors were assured of a cordial welcome to that busy, industrial centre. It was also agreed that a midsummer outing or educational tour should be made by boat around the Georgian Bay, probably in July next, when many large saw mills and timber limits in that active lumbering district will be the Mecca. The details of the trip were left in the hands of the new executive to arrange.

Officers Elected for the Coming Year

The following officers were elected for the coming year:

President—Thomas Patterson, Hamilton.

Vice-President—John B. Reid, Toronto.

Directors—

Eastern District—E. M. Barrett, Ottawa; Grant P. Davidson, Ottawa.

Central District—W. M. Tupling, Orillia; T. H. Hancock, Toronto.

Northern District—Howard Hesson, Sault Ste Marie; E. L. Casey, Sudbury.

Western District—A. S. Nicholson, Burlington; K. J. Shirton, Dunnville.

Southern District—J. C. Scofield, Windsor; B. F. Clarke, Glenoe.

No. 6 District—J. A. Matthews, Orangeville; J. B. Mackenzie, Georgetown.

The sessions began in the morning and several reports were read after which there was an adjournment for lunch which was tendered the visitors by the retail lumbermen of Toronto, tables being set in the convention room. A cordial vote of thanks, which was moved by E. M. Barrett, of Ottawa, and seconded by J. C. Scofield, of Windsor, was accorded the retailers of Toronto, for their hospitality

and, in this resolution, which was carried by a standing vote, the wholesale dealers were also included.

President Reviews Operations of Past Year

President Patterson of Hamilton, in presenting his annual report, said:

Since the first special general meeting of the Ontario Retail Lumber Dealers Association, which was held in Toronto on September 3rd and 4th, 1918, the great war which was then rapidly approaching the end for which the allied nations were fighting, has been finished and won by the Allies. The fact that we are again enjoying the blessings of peace is undoubtedly the greatest thing we have to consider in connection with trade conditions to-day. Until November 11th, 1918, all our thoughts had been given over for four years to consideration of how we could assist in the efforts of our army during the war. Our business interests, important as they are to all of us, had to take second place, and the result was that every step we took, whether of a business or personal nature, was regulated by its effect upon our war efforts. We were unable to consider our business interests from the point of view which was normal before the war.

To-day we are facing a new set of conditions and though they are fortunately conditions of peace, it is unlikely that for some years to come we shall ever again return to such conditions of supply and demand as those which formerly prevailed. Although the war is over its effects upon business conditions will be of long duration. In fact, no man can foretell how long it will be before the effects of the war can be considered as absolutely of the past—that is to say, its effects upon business. Mentally, intellectually and morally, the condition growing out of the war will be felt by your children's children unto many generations.

The Magnitude of the Construction Work

As to the effect of the return of peace upon business conditions, especially those connected with our lines of trade, it is most encouraging to note that the fear felt by many of us before the end of the war, that we would have to face a long period of disturbance during which the demand would be badly demoralized, has been removed. We have quickly come to realize that the very condition which seemed to threaten us with disturbance, namely the world-wide nature of the destruction which has taken place, is responsible for the growth of a feeling of assurance on account of the vast amount of reconstruction of every description that is to take place. The very magnitude of the requirements alters the situation, changing it from one of uncertainty to one of probable activity on a scale such as has never before been equalled. In those countries which were the unhappy scene of the war; in those countries whose sons went to the war, and even in those countries which maintained neutrality through its duration, reconstruction requirements are expected to be of great proportions.

Our interest as retail lumber dealers to-day consists in the application of these conditions to our own business affairs. As Canadians we belong to a country whose raw materials are pre-eminent of a type for which the whole world is crying to-day. Our great industries—lumber manufacturing among them—are primarily con-

The Energetic Men Behind the O. R. L. D. A.

Thos. Patterson, Hamilton, Ont.

Re-elected Director, Southern District

cerned with the production of these raw materials and their conversion into articles which are needed for the rebuilding of the world. It may be thought, on first consideration, that under such conditions the retail lumber dealer stands to lose, on account of the diversion of much of the raw material of his trade into other channels, but a closer study will reveal that this is not so.

The Retailer's Position as it is To-day

Very large quantities of lumber and of finished articles made from lumber will undoubtedly be exported from Canada, which will make the Canadian manufacturer of these products more prosperous and busy than ever before. But, during the four years of war little or nothing has been done in Canada in the way of erecting homes, warehouses, factories or public works to meet the requirements of the steadily increasing population. To-day, with the return of the men from the front and the approaching renewal of industrial activity on a normal basis, Canada will come into the market for larger quantities of lumber and of articles made from lumber than ever before in its history. This is where the retail lumber dealer comes closely in touch with the changed conditions developing out of the return of peace. A few months ago there were some who thought that it would be years before Canadians would be in a position to spend money again in any volume upon lumber and its products but there are few to-day who have not been forced by the logic of events to abandon this idea and to enlist themselves in the ranks of those who expect at an early date a period of activity for the retail lumber dealer. The signs of this approaching activity cannot be ignored. They impress us with a conviction that the coming spring and summer will witness the renewal of the demand for the retail lumber dealer's stocks and services, and that the demand will increase until, in shorter time than some of us imagine, it will be greater than it has ever been in the past. The approach of this period of business activity imposes upon us a responsibility to be prepared for it which will require the best of our abilities to meet.

Under conditions such as these our Association commences the second year of its existence. We have been most fortunate in getting the Association well started just in time. The work of organizing and of demonstrating to the members of the trade the value of the benefits which can be secured by co-operation, has been carried out during a period of trade uncertainty and now, when we are on the threshold of renewed trade activity, we have a good Association in operation ready to carry on the important work for which it has been formed. The foundation has been well laid for co-operation, and it remains for us to erect on that foundation an Association structure such as the great importance of our trade requires.

Getting Others to Join in the Good Work

Those who have assisted in the work of this Association during the past year have earned the co-operation of those other dealers who, from one reason or another, have waited a year before identifying themselves with the Association. The membership which we have already secured—135—is a good record for our first year, but there are about 350 other dealers in Ontario who should join, and while we may not get them all, we must get most of them. Our influence and success will never approach their proper proportions until we have at least doubled our present membership list. For the welfare of the Association, as well as the welfare of the individual members, it is imperative that each present member of the Association should show to those who have not yet joined that they should immediately do so. This is perhaps the most important part of the work of the individual members for the present year. With double our membership our influence and success will be more than doubled. That is what we all want, and it is in your hands to help us attain this goal. When you have joined and paid your fees, you have not done your whole duty to the Association. You have really just started. It is up to you then to find out how much good you can get out of it, and to see how much good you can do for it. Your fees and your efforts for the Association are an investment and you ought to sit up nights planning to get a big return from it. The things we have been able to accomplish during our first year, are good proof of the value of the Association, and it should not be necessary for your officers, or for anyone else to urge you to take a lively interest in increasing our membership list, upon which everything else in connection with our progress depends.

I do not think that you will expect me to-day to make any protracted remarks upon the details of our work. We have had successes which the most sanguine of us scarcely hoped for a year ago. Some of these were reported to those who attended the September meeting. The work has been going ahead along similar lines since that time and further equally satisfactory results have been secured. As there are many matters of importance for us to discuss it will be best for me to refer to our progress only in a general way so that we may have as much time as possible for discussion, for

the passing of resolutions, the election of officers and other matters which must be dealt with to-day.

The Relations Between Wholesaler and Retailer

There is one matter, however, which should be referred to in the Chairman's address, namely the approach towards a better understanding between the retail and the wholesale branches of the lumber trade which has been developing during the last few months. You will hear to-day of the steps that have been taken by the Wholesale Lumber Dealers Association, Inc., at the request of one of our members, towards clearing up one of the most fruitful sources of misunderstanding that exist between the wholesaler and the retailer, namely, the poaching, if I may so call it, of the wholesaler upon the legitimate field of trade of the retailer, and the equally disturbing tendency on the part of the retailer to "get square" with the wholesaler whenever possible by going beyond him in search of stock. These two tendencies, no matter how great or how small may have been their development in the past, have been a source of ill-feeling and have done much to make business life unpleasant and unprofitable for both parties. The progress which our Association has made has helped to influence the wholesalers and to demonstrate to them the importance of giving this matter their attention. On the other hand, the Wholesalers' Association has also been making good progress and has been quick to realize the necessity for doing all that is possible towards the removal of this source of trouble. One of the happy results of that progress has been the passing of a resolution by the Wholesalers instructing their committee on trade relations to be prepared to meet a committee from our association to deal with this matter. The passing of this resolution has not been the outcome of self interest, but the natural growth from the seed of co-operation which was planted among the wholesalers at almost the same time as among ourselves. It will be our duty to-day to give this matter consideration and, if the majority so desire, to appoint a committee from our association to meet the committee from the Wholesale Association for the purpose of endeavoring to find a solution of the problem. It is most important that we give this matter our best thought and appoint a capable committee to represent us in the joint deliberations. It is a problem which we can hardly hope to solve in a day, but undoubtedly we will be doing the right thing if we appoint a strong committee and instruct them as fully as possible in regard to our feelings about the matter. If we do nothing else to-day we will have accomplished a splendid result.

In conclusion, gentlemen, I wish to give you some faint idea of the pleasure it has been to me to preside over the affairs of our association during the first year of its existence. It will ever be one of the greatest sources of pleasure to me to think that you have honored me by placing me in this important position; and it will be a still greater pleasure to feel that, in passing on the office to other hands, I am able to do so with a slight measure of satisfaction over results accomplished. Not that I appropriate much of the credit for this to myself, but that it has been my fortune to preside over an association for which there was great need and in the creation of which we have been able to enlist the energies and the interest of as able and as fine a set of business men as it is possible to bring together.

Encouraging reports were also presented by Horace Boulton, secretary-treasurer of the association, and John B. Reid, chairman of the Membership Committee, which showed that one hundred and thirty-one dealers belonged to the organization. E. M. Barrett, chairman of the Legislation and Transportation Committee, and Walter C. Laidlaw, chairman of the Insurance Committee, also read very complete and interesting reports.

Owing to pressure on the space of the "Canada Lumberman," in recording the activities of other gatherings of the past two weeks these reports are unavoidably held over until the March 1st edition, along with the interview with S. Price, chairman of the Workmen's Compensation Board, in regard to several proposed amendments to the present act, and interviews with Sir William Hearst, and Hon. I. B. Lucas, Attorney General of Ontario, with respect to changes in the Mechanics' Lien Act and the Business Assessment Act, which will be dealt with fully in the next issue of the "Canada Lumberman."

Resolution to Hustle for New Members

Resolved that this association express their appreciation of the work accomplished by our Legislative Committee and endorse the proposals which they have submitted.

Resolved that we recognize the importance of having our association represent as nearly as possible the entire retail industry in Ontario and that each member should make every endeavor to secure new members wherever possible.

Resolved that Messrs. T. E. Rathbone and T. A. F. [Name] of Toronto be auditors to audit the books of the association for the years 1918 and 1919.

IMPORTANT RESOLUTIONS ADOPTED BY CONVENTION

In presenting its report the Legislation Committee expressed the view that under the present legislation the funds provided are insufficient to make the scheme practical:

Whereas, through the efforts of our Association, many deferred shipments of orders placed by our members have been secured, from wholesalers and manufacturers who were delaying shipment, and

Whereas, in future, some of the members of our Association may feel inclined to cancel orders on a falling market, therefore in order to strengthen the association,

Be it resolved that this association strongly deprecates any such action on the part of its members, and request the directors, in all such cases, to make a thorough investigation of same.

The Terms of Sale Net Cash

Whereas the retail lumber dealer must buy his lumber in car lots, carry for a considerable period and distribute in small lots to his customers, and

Whereas the amount of capital required in the retail lumber business is now so large, and

Whereas the public is continually demanding increased service from the retail yards

Be it resolved that the "terms of sale" in the retail lumber business in the Province of Ontario should be net cash, with ledger

(5) That a copy should be made of this resolution and forwarded to the Canadian Manufacturers' Association.

The Standardization of Millwork Sizes

Resolved that Canadian hardwood flooring manufacturers be urged to standardize thicknesses and tongue-and-grooving, and if possible adopt United States standards.

Resolved that a committee be appointed to consider the adoption of the standard millwork sizes adopted by the Toronto dealers or any changes in the same which may be considered advisable to be standard for the whole province, and that a list of these standards be again published in the Monthly Bulletin.

Better Trade Relations Committee

Resolved that this Association appreciates the action of the Wholesale Lumber Dealers Association in appointing a Trade Relation Committee to confer with a similar committee from our association, as mentioned in the secretary's report and desires to go on record as approving the principle therein involved, and approves the appointment by the directors of a committee consisting of Messrs. J. B. Reid, T. H. Hancock and W. C. Irvin for the above purpose.

Resolved that the Monthly Bulletin, published by the Association, be continued as a monthly publication until such time as the secretary considers it advisable to alter the frequency of its issue.

B. F. Clarke, Glencoe, Ont.
Re-elected Director for Southern District

T. H. Hancock, Toronto, Ont.,
New Director Elected for Central District

A. S. Nicholson, Burlington, Ont.,
Re-elected Director for Western District

accounts carried only with people of absolute approved credit, and who agree to pay each month's account in net cash on or before the tenth of the following month, and

Be it resolved further that a card containing this resolution in printed form be sent by the secretary to each member.

The Workmen's Compensation Act

Whereas the directors of the Ontario Retail Lumber Dealers Association and a number of members of the Association waited upon the Chairman of the Workmen's Compensation Board on Monday, February 10th.

Be it resolved that the following recommendations be submitted to the Workmen's Compensation Board and to the Attorney-General for Ontario.

(1) That the employer should have control over the doctor handling injured employees so as to prevent collusion and malingering.

(2) That information should be furnished showing the plants that are responsible for the accidents that occur and the amounts paid out for accidents in each plant as compared to the amount of assessment paid in.

(3) That the right of each Safety Association to represent its group before the Board on matters of common interest should be recognized.

(4) That provision should be made for having the accounts of the different groups audited by auditors appointed ourselves and for securing detailed statements of the money received and paid out.

Resolved that we consider it to our mutual advantage to purchase when possible from wholesalers who patronize our Monthly Bulletin by advertising therein.

Resolved that this association is strongly opposed to the proposed increases asked in charges by the Bell Telephone Co. of Canada, and that a copy of this resolution be sent to the Dominion Board of Railway Commissioners.

Resolved that when new districts or local groups are created they shall be entitled to two representatives each on the Board of Directors, and, resolved that any districts of the association be authorized to subdivide into two or more districts if it may see fit.

Resolved that government owned or operated railroads should be subject to the jurisdiction of the Dominion Board of Railway Commissioners, and that a copy of this resolution be sent to the Minister of Railways and Canals.

Resolved that this association is opposed to Circular No. 86, issued by the Canadian Railway War Board, proposing to cancel freight credit arrangements, and that a copy of this resolution be sent to the Canadian Railway War Board and to the Canadian Manufacturers' Association.

Objections to Increased Switching Charges

Resolved that the Ontario Retail Lumber Dealers' Association is strongly opposed to the proposed switching charge increases asked for by the railway companies and that a copy of this resolution be sent to the Canadian Manufacturers' Association and to the Dominion Board of Railway Commissioners.

Visitors Were Banqueted by the Wholesalers

Social Function After Business Proceedings Was Unqualified Success—Rousing Speeches, Stirring Songs and Co-operative Movement

The complimentary banquet which was tendered the visiting retail lumbermen at the King Edward Hotel, Toronto, at the close of the business proceedings on February 11th, was the most representative and largely attended social function which ever took place in the local annals of the industry. The hosts were the wholesale lumber dealers of Toronto and Western Ontario, and there were over three hundred persons in attendance. Everything in connection with the ambitious undertaking was conducted in an admirable manner, and passed off with great éclat and enthusiasm. The evening was principally devoted to entertainment and merry-making, and all declared that the gathering was one that will live long in the memory of those fortunate enough to be present. The speeches were short and to the point, while the talent, which so ably contributed to the attractive programme, was the best that Toronto can boast of. Every artist was accorded warm applause and had to respond to well-merited encores.

A. E. Clark, chairman of the Wholesale Lumber Dealers' Association, Inc., of Toronto, who ably presided, had on his right, Thomas Patterson, of Hamilton, President of the Ontario Retail Lumber Dealers' Association, and on his left, John B. Reid of Toronto, vice president of the O.R.L.D.A. At the head table were also seated the directors of the association, along with His Worship Mayor Church, of Toronto, Dr. W. A. Riddell, Supt. of the Trades and Labor Branch, Dept. of Public Works, of Toronto, and others.

After the toast of "The King" had been loyally honored, Mr. Clark, in greeting the Ontario retailers as the guests of the wholesale lumbermen of Toronto and Western Ontario, expressed his pleasure in presiding at such an important function, and in welcoming them to the city of Toronto. It was, indeed, a privilege to meet so many men in the trade, who were making history, at one of the finest and most representative turnouts that ever graced a banquet table. Such gatherings as these demonstrated that trade associations meant a great deal to the lumber industry, socially as well as in a business sense. They should all put forth their best effort to work together for the good and welfare of the lumber business. It made no difference whether they were retailers, manufacturers or wholesalers, as they were all lumbermen, selling lumber and enhancing the trade as a whole from many standpoints. Any little controversies could be easily settled at such a gathering as he saw before him and there was no room left for petty squabbling. The industry had just come through one of the most trying eras in Canada and now should unite and co-operate to put things back on a pre-war basis. Canada had emerged from the great world conflict with unbounded credit and, now that the war was over, they should give business a chance. There was nothing to be gained in going around and saying that things were bad and that the bottom had fallen out of everything. Such was not the case and matters would sooner or later readjust themselves, but all this could not be brought about in a few short weeks. It would not do to sit down in an office and expect matters to right themselves of their own accord. The members of the trade should get out and merchandise their lumber and help place affairs on a solid, substantial footing. All were in the same boat and means should be established of doing business on a proper basis. There had been distributed to the members a booklet entitled "Constructive Advertising for the Lumber Business and the Encouragement of Home Owning." "We can all make our business attractive by well directed advertising and why not do it?" asked the speaker. "Again, I welcome you to Toronto on behalf of the wholesale lumber trade, and hope that you will carry away many pleasant memories from this most successful convention."

Mayor Church Praises Work of Lumbermen

Mayor Church expressed his pleasure at being present. The lumber trade possessed a splendid record during the war and made important contributions of men, money and material in winning the great struggle for human liberty and advancement. The lumbermen had played an important part in the development and settlement of Canada and he felt they would still do all in their power during the readjustment period and the return to prosperity. Toronto was pleased to welcome such a representative body of patriotic and progressive men and His Worship added that he had never greeted a gathering with greater pleasure than he did the present one. Toronto had sent some sixty thousand of her sons to the front, and in

that number there had been five thousand casualties. The lumbermen were the pioneers in exploration and settlement of the Dominion and enacted no small part in building up Canada. Many of the larger centres owed their very existence to the lumber industry, and added the Mayor, "I have much pleasure in handing over to you the keys of the city. If any of you gentlemen fall by the wayside while here I promise you that you will be exempt from any liability whatsoever. (Laughter).

The Housing Problem in the Province

The next speaker was Dr. Walter A. Riddell, who is the superintendent of the Trades and Labor Branch of the Ontario Department of Public Works. He paid a tribute to the worthy organization of the lumbermen and spoke on some of the problems of reconstruction, and more particularly the housing plan and employment of returned soldiers. While all the provinces had agreed upon a

"Hand in Hand for the Good of All"

uniform system of employment offices, which were now being organized and opened up in every part of the country, it must be remembered that such bureaus did not of themselves create work for the returned heroes. The Ontario government and also the individual had a big responsibility in this time of readjustment and all should do their part. Some eleven million dollars were available in the province for housing schemes, and it was hoped that advantage would be taken of this sum this year to the extent of, at least, five million dollars in the construction of dwellings for the wage earners and the overseas veterans. The funds available were, as stated, to erect houses for the average wage earner, and the men who were coming back from Europe. Construction would create employment and contribute to the happiness and comfort of those who needed domiciles. In a recent investigation conducted by the speaker in Toronto, out of four hundred average homes of men earning between seventy and one hundred dollars a month, it was found that forty-six per cent. had to sub-let their dwellings in order to reduce the cost of rent and other expenses. The privacy of many families was thus interfered with and, in the proposed housing plans, the lumbermen could actively participate. They were a good group of men to put this thing over and should organize to do so. He was not there to tell them how, but they could get together with the groups of people who were interested in the project. Communities so far had been backward in the housing movement. The retail lumbermen could successfully co-operate in this sphere and thus take up the slack of unemployment and supply good residences for the average worker and the boys who were arriving back from overseas. It was said that thirty-five thousand war brides were coming to Canada to reside, and one thing that would contribute to the welfare and contentment of the men who had been upholding the interests of Canada in the trenches, would be the fact that they could secure well-appointed and sanitary habitations in the Dominion, and in this great work the Ontario government was endeavoring to co-operate in every way.

Mr. Manbert Makes Appeal for Co-operation

A. C. Manbert, of Toronto, who will leave shortly for Great Britain as the trade representative of the lumber interests in order to widen the market for Ontario forest products was introduced by Chairman Clark as one in every way eminently fitted for the important mission and a gentleman enjoying the highest confidence and

esteem of the industry. Mr. Manbert made a happy and graceful reply, and remarked that organization was in accord with the spirit of the times. We had just passed through a remarkable period and epoch in the history of the world, and it was necessary that an aggressive business policy be adopted during the present crucial times. It was a splendid thing to come together, and delightful to mingle in such associations as the lumbermen had formed, and develop by mutual contact our common impulses and high ideals. He believed that the lumber business was the finest on the face of the earth, free from the ordinary trammels and restraints of many other trades and offering large advantage to the generous spirit and inspiration of the times. In the period of readjustment they should be willing to give and take and not be impatient. Men were too prone to lose their personality in the narrow limitations of their own environment and fail to see things that loomed large. He assured his hearers that he deeply appreciated the confidence which had been reposed in him and, in taking his departure for overseas he was much gratified at their abundant evidence of kindness and good will.

John B. Reid, Vice President of the Ontario Retail Lumber Dealers' Association, returned hearty thanks to the hosts of the evening, the wholesale lumbermen of Toronto and Western Ontario, for their generous hospitality, which they all thoroughly appreciated. On behalf the retailers, he joined in wishing Mr. Manbert God-speed in his important work overseas. A more conscientious and efficient representative could not be selected than Mr. Manbert. Owing to

the organization of both wholesalers and retailers, better and more amicable trade relations existed between these two branches of the lumber business. Upright, steady, straightforward business was what the body of retailers stood for and represented. They would continue to work hand in hand with the wholesaler, and had every faith that the latter would work hand in hand with them.

Those who so ably and acceptably contributed to the attractive and enjoyable programme which thoroughly delighted all during the evening, were:

Will Thirkettle, comic song; Arthur Blight, baritone solo; Le Roy Kenney, entertainer; Louis Romanelli, violin solo; Gus Hill, comic song; Frank Oldfield, baritone solo; R. G. Cook, magician; Gladstone Brown, tenor solo; Gus Hill, comic song; Frank Oldfield, baritone solo; Will Thirkettle, comic song; Louis Romanelli, violin solo; Le Roy Kenney, entertainer; Gladstone Brown, tenor solo; Arthur Blight, baritone solo; F. Oldfield-G. Brown, duet.

The committee in charge of the banquet which was in every way a signal success, was composed of W. F. Oliver, (Oliver Lumber Co. Ltd.), chairman; D. C. Johnston (Union Lumber Co. Ltd.), L. D. Barclay (Canadian Western Lumber Co. Ltd.); and A. K. Johnson (J. P. Johnson & Son). They worked diligently both in season and out of season to carry out all the elaborate arrangements for the most representative and largest gathering of the lumber trade ever held in Canada and deserve generous praise for their untiring and self sacrificing efforts.

High Honor for Progressive Lumberman

C. W. Wilkinson, Toronto, Elected Member of Council, Toronto Board of Trade

C. W. Wilkinson, who was recently elected a member of the Council of the Toronto Board of Trade, being nominated by the Lumbermen's Section of that body, is spending a few weeks' holidays in Florida. Mr. Wilkinson was also re-elected a director of the Wholesale Lumber Dealers' Association Inc., at the annual meeting, and has always taken a deep interest in the welfare and progress of all get-together movements in the industry. That he will make a valued and useful member of the Council of the Board of Trade and that further administrative honors will come his way in that influential organization, is the ardent wish of his many friends.

Mr. Wilkinson is vice-president and managing director of the Union Lumber Company, Ltd., of

Toronto, who specialize in Ontario soft woods. He is the only son of W. C. Wilkinson, the veteran secretary of the Board of Education, and was born and brought up in Toronto. His first job was with De Laplante and Bowden, who ran a planing mill and retail lumber yard on Front Street East, away back in the early 90's. Mr. Wilkinson later went to Buffalo, where he was engaged with the Laidlaw Lumber Company as foreman of their yard at the foot of Genesee Street. He was next in the service of various concerns in the west, particularly in Minnesota and Dakota, and gained an all-round experience, not only in the manufacturing end, but also in the shipping, selling and other branches. Returning to the east he was made vice-president of the De Laplante Lumber Company, Ltd., wholesalers and manufacturers, and was located at North Tonawanda, N.Y. In 1907 they moved their head office to Toronto and Mr. Wilkinson came back to his native city. He was with this organization, until in association with Duncan McLaren and others, the Union Lumber Company was formed in May, 1911. Duncan McLaren, president of the latter company, was with the DeLaplante organization as financial manager, and H. G. McDermid, secretary-treasurer of the Union Lumber Company, was the accountant, so that the association of these three gentlemen in their former relations was not broken by the new enterprise which they so successfully launched eight years ago. Mr. Wilkinson is also interested in various other lumber concerns, and outside of his wide business activities he is enthusiastic over automobiling and hockey. He is also a Rotarian and fond of travel. His recent election to the Council of the Board of Trade is an evidence of the esteem in which he is held by the general business community.

Personal Paragraphs of Interest

John Rudden, purchasing agent for the Dempsey Logging Co., Vancouver, spent a few days in Toronto recently.

H. Bourgouin, wholesale lumber merchant, and F. Tremblay, of F. Tremblay & Co., lumber dealers and interior trim manufacturers, are on a trip to Havana.

Reg. Buchan, secretary-treasurer of Robert Bury & Co., (Canada) Ltd., Toronto, left at the beginning of the month on a business trip to the Old Country.

Wm. Power and John Levie, of W. & J. Sharples, Quebec, are in England on business at the present time, and while there will give close attention to the lumber requirements of the country.

P. L. Canfield, who for several years was with the R. E. Butler Lumber Co., of Woodstock, Ont., has gone into the wholesale lumber business for himself and intends covering Western Ontario with full lines of hemlock, pine, spruce and B. C. products. He has had a wide experience in the buying and selling of lumber and various building materials and is favorably known in Western Ontario. Many friends will wish him every success in his new undertaking. Mr. Canfield, who has opened an office on Wellington Street South, Woodstock, spent a few days in Toronto recently and attended the annual convention of the Ontario Retail Lumber Dealers' Association.

Hugh A. Rose, of Toronto, representing Mason, Gordon & Co., is on an extended business trip throughout the Maritime Provinces.

Word has been received in Toronto, of the death of R. H. Clarke, secretary-treasurer of the Wheeler-Osgood Co., Tacoma, Wash., who passed away suddenly. He was a well known authority on trade matters and, in a recent issue of the "Canada Lumberman," an able article

by him, on the position of the lumber trade and its prospects during the period of reconstruction appeared.

J. O. Chalifour, of Quebec, Que., who is secretary of the Retail Lumber Dealers' Association of that city, spent a few days in Toronto recently, on his way to Mount Clemens, Mich., where he will enjoy a rest of a few weeks. He was accompanied by Mrs. Chalifour, and attended the annual convention of the Ontario Retail Lumber Dealers' Association, taking great interest in the proceedings. Mr. Chalifour has long been an ardent exponent of co-operation and organization, and is one of the live wire lumber merchants in the ancient Capital.

John Butler, who recently left Woodstock, Ont., to take up his residence in Sarnia, is a former Mayor of Woodstock. He is a brother of R. E. Butler and was in partnership with him in the retail lumber line until 1906. He then carried on a wholesale business for a long period, but retired some three or four years ago.

Wm. Rutherford, of Wm. Rutherford Sons Co., Ltd., Montreal, has been elected a member of the council of the Board of Trade of that city.

James Buchanan, of the James Buchanan Lumber Co., Montreal, has just returned to business after an illness dating from the beginning of October.

Arthur Campbell, managing director of the Campbell-MacLaurin Lumber Co., Ltd., Montreal, is on a visit to the South.

W. B. Snowball, of J. B. Snowball Company, Ltd., Chatham, N. B., is spending a few weeks in the South for the benefit of his health.

J. H. Monteith, of Monteith Bros., Rosseau, Ont., has returned from spending a few weeks in the South. His brother, Arthur Monteith, after attending the Retail Lumbermen's recent convention in Toronto, left for New York, where he was present at the seventeenth annual banquet of the Canadian Camp at Hotel Astor. He will spend a few weeks in Florida before his return.

Alfred E. Read, of Read Bros., Ltd., Toronto, has returned from an extended business trip to the Coast and Mountain mills of B. C. He states that the industry is looking forward to a big export trade during the coming year and that the period of readjustment is being faced with confidence and assurance that everything will come out satisfactorily.

J. G. Morningstar, who resides in Willoughby township, has just been elected warden of Welland County, Ontario. His many friends will congratulate him on his well deserved promotion. Mr. Morningstar has been in municipal life for a number of years and has two of the most prosperous sawmills in the county in addition to the excellent farm on which he resides.

Walter R. Gilley, of New Westminster, B. C., pioneer logging contractor, died at his home recently, aged 60 years, following a paralytic stroke. He had long been identified with public affairs and was associated with all movements for civic betterment.

The appointment of L. B. Beale, as British Trade Commissioner, at Winnipeg, has been officially approved. Mr. Beale has had business experience in Canada since early 1915, in the Forest and Lands Department of the Government of British Columbia. He has recently been engaged in a special mission to the United Kingdom and France for British Columbia as a timber trade commissioner, and will sail for Canada about February 20.

A. C. Manbert, of Toronto, who is the special overseas representative of the Ontario lumbermen, expects to sail on February 22, for England, where he hopes to widen the uses and create a greater demand for white pine and other wood products. Mr. Manbert will be provided by the Ontario Government, with an office and all needed equipment to conduct a vigorous publicity campaign.

Hanford Price, who is a lumberman, was recently elected mayor of Moncton, N.B., winning a hotly conducted campaign, in which he was endorsed by the Labor interests.

Will Conclude Shipbuilding Activities

The Imperial Munitions Board, after constructing 47 wooden ships, is about to conclude its operations in that line, says a recent despatch from Ottawa. There has been no development in this business since the Dominion Government elaborated a shipbuilding program of its own, and activities have been centered on finishing up the vessels on the stocks. The last of them is scheduled to sail for British Columbia on February 15 via Panama, and will carry a c of lumber. There is no foundation for a report that sixteen constructed for the board in the United States proved unfit for

Generous Response to Red Cross Appeal

The B. C. Mills Timber & Trading Company and its employees were again to the fore in their generous response to an appeal for funds, this time by the Canadian Red Cross Society, in its special campaign. The company subscribed \$1,000.00, while its employees, every one of whom subscribed, responded with

Pulp and Paper Producers Foregather

Representative Will Be Sent to England to Look After the Interest of Canadian Manufacturers

The Canadian Pulp & Paper Association held its annual meeting at the Ritz Carlton Hotel, Montreal, on January 30 and 31. The technical section met on the first day, when Dr. J. S. Bates, superintendent of the Forest Products Laboratories, the retiring president, referred to the progress made during the year. He declared that if the export business was to be expanded it would be necessary to recognize more freely the technical man. The following officers were

J. A. Bothwell, East Angus, P.Q.
New President of Canadian P. & P. Assn.

A. L. Dawe, Montreal, P.Q.
Progressive Secretary of C. P. & P. Assn.

elected: Chairman, Mr. John Stadler; vice-chairman, Mr. F. A. Sabatton; council, Messrs. L. H. Shipman, George Carruthers, and J. B. Beveridge. The secretary, Mr. A. L. Dawe was re-elected.

There was a full attendance at the annual meeting of the association on January 30. Mr. F. J. Campbell, the president, in reviewing the year's work, spoke of the problems which had been worked out during the twelve months. With regard to the returning soldiers, it was being demonstrated daily that by the exercise of patience and effort on the part of the employers and foremen the majority of these men would soon fit into their former occupations and become more valuable than before.

The reports of the following sections were presented: News, Mr. G. M. McKee; chemical pulp, Mr. Carl Riordon; mechanical pulp, Capt. J. H. A. Acer; book and writing, Mr. R. S. Waldie; board, Mr. J. F. Taylor; coated, Mr. Geo. Pauline; felt, Mr. G. M. Graves; wrapping, Mr. F. Howard Wilson; technical, Dr. J. S. Bates; and woodlands, Mr. W. Gerard Power.

A cable was read from the Canadian Trade Mission, in London, suggesting that in view of the many inquiries for Canadian pulp and paper, a representative be sent to England. This matter was left in the hands of the new executive.

The question of publishing an educational course on technical subjects relating to the industries was discussed, opinion being unanimously in favor of this action. The sum of \$5,000 was voted for the expenditure for this course during the current year.

Mr. J. A. Bothwell, of the Brompton Pulp & Paper Co., East Angus, P. Q., was elected president, and Mr. G. Cahoon, of the Laurentide Co., Grand Mere, P. Q., vice-president.

In the evening a dinner was held at the Ritz Carlton Hotel.

Canadian Forest Engineers Meet

The annual meeting of the Canadian Society of Forest Engineers was held on January 29 at the Windsor Hotel, Montreal, Mr. Ellwood Wilson presiding. There were present several representatives of the United States forest organizations, the meeting being followed by a dinner. Dr. C. D. Howe, of the Forestry Department of the University of Toronto, read a paper on forest research work, and Mr. Wallace Dominion Forestry Branch, one describing the forest investigations on the Dominion Forestry branch at Petawawa, this being done in co-operation with the Militia Department. A discussion followed.

The annual meeting of the National Wholesale Lumber Dealers' Association will be held in Philadelphia, Pa., on March 19 and 20.

Forestry Protective Association

The Three Quebec Forest Protective Associations—the St. Maurice, Laurentian, and Southern St. Lawrence—held their annual meetings on January 29 at the Windsor Hotel, while the Quebec Forest Protective Association—a combination of the three—held its meeting on January 30. Apart from the routine business, the chief topic of discussion was the use of aeroplanes, and on this no definite action was taken.

The St. Maurice Association

Mr. R. F. Grant presided at this meeting, and in his report stated that notwithstanding the increase of wages and cost of material during the past season the financial report was evidence that the season 1918 had been a successful one. This was due largely to the increased efficiency of the patrol system and the interest and the kindly co-operation of logging operators, settlers and the public in general throughout the district. The figures showed that a very small area of merchantable timber was burnt; the largest burnt over areas occurred in cut over land. Referring to the hydro-plane patrol, Mr. Grant asked the members to seriously study the cost of operation and the possibilities of such patrol; in his opinion this system of patrol was premature.

Mr. H. Sorgius, the secretary-treasurer and manager, reported that the cost of operations to the members was only \$0.0038 per acre, or \$0.0002 more than during season 1917; also that the cost of extinguishing of fires was about the same as in 1917. The Provincial Government had realized the efficient patrol rendered by the associations and intended to pass a law obliging all limit holders non-members of the protective associations, to patrol their holdings to the satisfaction of the provincial authorities, by competent rangers employed only for this purpose, failing same the patrol would be taken over by the government and the cost borne by limit holders. The accounts showed a balance in hand of \$2,941. The number of fires occurring during the season 1918 was 93, of which 22 required extra help to extinguish, burning over an area of 3,442 acres. Of these, 346 acres were green standing timber, 438 acres young growth not yet merchantable, 1,593 acres cut-over land, and 1,065 acres old burn. The amount spent in fire-fighting was \$984.75, of which the government's share was \$452.68. Logging companies and their employees had given most effective assistance at critical times, whenever called upon. Certain logging companies were using portable stoves on the drives. This was a most commendable change from the standpoint of fire risk, and it was strongly recommended that all operating companies should follow this policy. The report was adopted.

The members discussed from every angle the use of aeroplanes, cost, efficiency, etc., and it was decided that a committee should look into the entire question, especially with regard to cost, before taking definite action.

The following officers were elected: Mr. Robert F. Grant, president; Mr. Charles Lebrun, vice-president; Mr. H. Sorgius, manager and secretary-treasurer; directors, Messrs. Robert F. Grant, Charles Lebrun, Ellwood Wilson, J. M. Dalton, H. Dansereau, T. E. Mack and F. I. Ritchie.

Laurentian Association.

At this meeting, Mr. R. P. Kernan (Donnacona Paper Co.) presided. The report stated that the season, although not as good as the previous one, was favorable for fighting, and no serious losses were incurred, although fire burned over a considerable area of old cuttings. In all, ninety-six fires were reported, and of these the regular staff of rangers put out, unassisted, eighty-nine. The Quebec Forest Protective Association had been incorporated, but the Ottawa Association did not endorse the plan and had withdrawn from the Quebec Association. The surplus amounted to \$5,379. Mr. R. L. Seaborne, the manager, submitted a detailed report of the year's operations. The following officers were re-elected: Messrs. Robert P. Kernan, president; A. J. Price, vice-president; directors, B. A. Scott, E. G. Gorman, C. A. Sewell, W. P. Grant, and A. J. Turner.

Southern St. Lawrence.

In presiding at this meeting Mr. W. Gerard Power stated that the benefits derived by timber owners on the South Shore of the St. Lawrence, in regard to the education of the people and the great change in their attitude, fully repaid any expenditure which they had been put to, and, of course, every one was getting a certain amount of protection over and above this campaign of education. While some of the members might find that the greater amount paid by them as assessment dues was large, if the value of the property protected was taken into account, the percentage looked at from the point of view of an insurance premium only was very slight.

The report of Mr. P. G. Owen, the secretary-treasurer, showed a

surplus of \$5,231. Mr. J. D. Brule, manager of the eastern division, and Mr. C. B. Guerin, manager of the western division, reported in detail on the operations of the year. In the former division 45 fires were reported and in the latter 80 fires.

The following were elected as officers: Messrs. W. Gerard Power, hon. president; R. L. Montgomery, president; directors:—(Western division) H. M. Wilson, Arch. Fraser, P. G. Quincy, E. A. Rockett, W. G. Power, D. C. T. Atkinson, J. V. Perrin; (Eastern division) Angus McLean, D. Champoux, Wm. Russell, Chas. MacLeay, H. F. Calhoun, C. W. Mullen and B. Scott.

Big Opportunities for Good Business

Canada Metal Company Holds Most Successful Sales Convention—Splendid Record During Past Year

The seventh annual sales convention of the Canada Metal Company, Ltd., Toronto, was held during the week beginning January 20th, and was a gratifying success from every standpoint. The company have a staff of thirty salesmen covering the Dominion and the annual gathering is always looked forward to with keen appreciation. The expectations of those who attended were more than realized on this occasion and, from a business, instructive, co-operative, and social standpoint the sessions left nothing to be desired.

W. G. Harris, Sr., president of the company, opened the proceedings in an optimistic address, in which he stated that year by year the business of the firm was growing and the sales staff increasing. Until a few years ago it was possible to call all their salesmen together frequently to discuss conditions, but now with branches in Hamilton, Montreal, Winnipeg, and Vancouver, and each with its separate sales staff, it was impossible to assemble more than once a year. At the annual gatherings the past year's results are looked over, all errors of omission and commission corrected, and the foundation laid for better service and greater efficiency. Mr. Harris added that the Canada Metal Company Ltd., stood for service plus quality, and that it was only by maintaining these high standards that they could expect to hold their supremacy in their particular line. He looked for a period of exceptional prosperity in the Dominion and thought that 1919 would witness a great trade expansion not only for their own firm, but for every Canadian manufacturer determined to go after the business and take full advantage of the opportunities presented.

Continuing, Mr. Harris stated, "one of our leading financial houses recently sent out a circular broadcast, which expresses my sentiments exactly, for I am a firm believer in Canada and its future. The reasons given for expecting a period of exceptional prosperity in the Dominion were as follows:

"The stage is set in Canada for a period of development, the like of which has never been known in the history of the Dominion. The nation is building ships that will carry Canadian products to every country in the world. The steel industries are being equipped on a scale that should, before long, make Canada independent of imported supplies. The big consuming markets are becoming more dependent each year on Canada for pulp and paper supplies, and this country is, physically, in a position to provide for the world's requirements indefinitely."

Mr. Harris, Jr., vice-president, presided, and in going over the annual report of sales of each salesman, said that it was most gratifying to see the progress made in 1918. In 1917 the company's sales established a record, but 1918 was far ahead. Not only had the branches made considerable progress, but large business had been done with Australia, New Zealand, South Africa, and other distant parts of the British Colonies.

"Our convention," Mr. Harris, Jr., continued, "will be devoted to going thoroughly into our various lines, so that salesmen can gain a greater knowledge of the goods they are selling."

The presentation of the prizes was most interesting, and Mr. Martin of Toronto, when he received his cheque for the first prize in general sales, was like Niobe—all smiles. Mr. White, of Winnipeg, made a good second. Mr. Parkin of Hamilton received a beautiful diamond ring for the first prize in the Harris heavy pressure babbitt metal competition. In this competition, Mr. Hughes, Toronto, was second.

Salesmen had been encouraged to send in questions to be answered in reference to all metals, or anything associated with the metal industry, and one morning was devoted to taking up such questions.

At noon each day, lunch was served at the Humber Bay Inn, and the trip along the lake shore made a most enjoyable break in the proceedings. Monday evening there was a smoking concert in the convention hall.

At the conclusion of the convention, a hearty vote of thanks was accorded to Mr. Harris, Sr., Mr. Harris, Jr., and Mr. H. C.

Crow, for the excellent way in which everything had been prepared and carried out.

Mr. Crow, in replying, stated that he hoped that each salesman had gained a little more knowledge of the goods manufactured by the company and that they would be able to assist everyone interested in the metal business with any difficulty which might arise, and that the motto for each one should be: "We will be satisfied with nothing short of perfection."

Is Embarking in the Wholesale Line

J. M. Donovan, of Toronto, recently returned, after spending several weeks in British Columbia, where he visited many of the Coast and Mountain mills. Mr. Donovan, who has been selling on commission in the lumber line for some years, is embarking in the wholesale lumber business, and will open an office on the fifth floor of the Bank of Hamilton Building, where he will specialize in B. C. lumber and southern hardwoods.

Speaking of the western situation, he stated there was a slight weakening in timbers and dressed stock, but that quotations on No. 1 and 2 common fir boards were being well maintained. As soon as freight rates via the Panama canal to New York fall it is felt there will be a much larger shipping business. The present tariff of \$20 per M feet, b m., is regarded as too high. In the Crow's Nest district the feeling is optimistic and stocks of soft white pine are not large. Several big mills are putting in hot ponds in order to increase production. The C. P. R. recently placed an order in that district for one million ties, which will use up a large quantity of the small logs, without in any way interfering with the usual manufacturing conditions. It is expected that an order for a hundred million feet from the British Government will soon materialize in B. C. The business will be divided up among all the plants being mostly for small dimension, board and interior trim. Mr. Donovan looks for an encouraging trade in the east during the coming year in western soft pine, fir, larch and western hemlock.

Effects at Camp Mohawk Disposed Of

The Imperial Munitions Board has announced the sale of Camp Mohawk, Deseronto, Ont., to Frank Anglin, of Brewers' Mills, W. S. Anglin, of Battersea, and Frank and Charles Anglin, of the firm of S. Anglin & Co., retail lumber merchants, of Kingston, Ont. The sale is a big one, as there is two and a quarter million feet of lumber in the camp which the purchasers acquire, as well as heating plants, etc. The Board has also announced the sale of the summer camp at Deseronto to W. S. Anglin. This includes about three-quarters of a million feet of lumber, as well as heating plants, etc.

The B. C. Mills Are Getting Alarmed

Word was recently sent to Sir Thos. Wihte, Minister of Finance, by Premier Oliver of B. C., who stated that unless the lumbermen can get new orders within three weeks, most of the B. C. mills will have to close down. The message to Ottawa was: "From information which I have received I am led to believe that the British timber control is calling for tenders from American brokers on the Pacific coast. Should the brokers succeed in obtaining this contract we shall feel that this result will have been caused by lack of persistent effort on the part of your Government to secure the necessary tonnage. We feel that it would be an abominable shame if, through lack of effort on the part of your Government, British Columbia fails to secure this business."

Quebec Advances in Forest Fire Work

In the Provincial Legislature of Quebec, recently, Hon. L. A. Taschereau presented a resolution and Bill to amend the law respecting the protection of forests against fire. He did this on behalf of the Hon. Jules Allard, Minister of Lands and Forests, who is a member of the Legislative Council. The Bill provides for the granting of subsidies to the forest protection associations in order to enable them the better to check fires in the timber concessions, either by means of patrolling aeroplanes or other methods, and also to force those methods, and also to force those companies which have not joined one of the four big forestry protection associations in the province, to take proper steps to safeguard their forest concessions against fire, or, failing their doing so, the Government will undertake the work and charge them with the cost.

It is understood that about ninety per cent. of the lumber companies belong to these associations, which take all necessary measures to ensure the safety of the forest concessions belonging to their members, and the new Act will practically force the outside companies to take similar precautions. Some of the protective associations are in correspondence with the Federal Government regarding the securing of aeroplanes for patrol work, which they expect to start next summer.

National Survey of the Timber of Canada

Canadian Forestry Association Urges Importance of An Accurate Inventory in the Interest of Conservation and Development—Prompt Action Necessary

The Forestry Conference held at the Windsor Hotel, Montreal, on January 29 and 30 was a complete success. It was a gathering of the members of the various forest protective associations, lumbermen from Quebec, Ontario, New Brunswick, and Nova Scotia, Government departments, Canadian Pulp & Paper Association, Canadian Forestry Association and of the general public. It was convened by the last named association, acting in conjunction with the Quebec Forest Protective Association and the Woodlands section of the Canadian Pulp & Paper Association.

The attendance was large. The discussions covered forestry, lumbering, and pulp and paper. In a sense it was an inter-United States conference, as several representatives from over the border were present and read papers. Some practical work was also done in the way of appointing committees to investigate problems affecting the lumber industry.

There were four sessions, two each day. On the first day the annual meeting of the Forestry Association was held, with a conference in the afternoon, and on the second day the proceedings were mainly directed by the Quebec Forest Protective Association and the Woodlands section of the Canadian Pulp and Paper Association.

On January 29 the proceedings opened with the annual meeting of the Canadian Forestry Association, the Hon. Sydney Fisher presiding in the absence of Lieut.-Col. Dennis, who is in Siberia.

Mr. Robson Black, the secretary, presented a long report detailing the operations of the year, which were directed largely to campaigns with the governments for changes in the by-laws or organizations, and also to educational work in the districts which chiefly required the attention of the Association. Reference was made to the car equipped with various forestry apparatus, and to propaganda work in the French districts of Quebec and New Brunswick, also in the West. The membership increased 2,000 and now stood at 8,000. The income totalled \$15,270, the balance being \$929.

There was a brief discussion on one or two minor points, after which the report was adopted.

At the afternoon session, the Hon. Sydney Fisher, who presided, referred to the importance of giving greater attention to the wood lots privately owned, which were now being dealt with in a very wasteful and unscientific way. Unless attention was given to these lots the damage to the resources of the country in the future would be enormous.

Part that Timber Played in War

Major Barrington Moore, of New York, who has recently returned from the front, read a paper on the part played by the French forests in the war and the work of the Canadian Forestry Corps and American forestry section in utilizing these forests. After pointing out the impossibility of shipping lumber to France, after the first two years of the war, owing to the tonnage shortage, and the military necessity for wood, Major Moore described the various purposes for which lumber was required, such as wharves, hospitals, barracks, railways, telephone and telegraph lines, fuel, trench work, packing cases, etc. The American army, he said, had not been long in France, before this necessity for lumber faced them in terrible earnestness. Col. Graves and himself were made responsible for getting this lumber, and it was understood that the French would fill the first requirements, but this only meant, they afterwards found, that the French would furnish the trees standing in the forests.

The situation was critical, as the troops were on their way and there was no available supplies. The army must have forestry troops and sawmills at once. General Pershing was so anxious about the situation that he dictated an urgent cable asking the War Department to stop sending fighting men until they first sent forestry troops.

Fortunately, France had the forests—and the reason was that France had practiced forestry for generations. The southwest corner of France, planted with maritime pine, was the largest source of lumber not only for the French army, but for the British and American armies as well. The French maintained absolute control over their forests, with a view to preventing annihilation. Ultimate control was vested in a committee of representatives selected by the Minister of Agriculture, the Minister of Munitions, and other members of the cabinet and representatives of the lumber industry.

The operations of the Canadian and American lumbermen were uniformly well carried out. The stumps were cut so low that one could hardly see them; the tops were chopped into cordwood and the

slash thoroughly cleaned up. The cutting areas of the Canadians and Americans were generally better than those of the French wood merchants themselves.

Organization of the Forestry Corps

The organization of the American forestry section was largely patterned after that of the Canadian forestry corps. Major Moore then referred to the co-operation given by the British and Canadian forestry directorate in France, and stated that after getting the requisite data the United States Government was asked for 18,000 forestry troops, of which 7,500 were to be skilled lumbermen, about 4,500 engineer troops, and 6,000 unskilled labor. The unit of the Canadian Forestry Corps was the company, that of the United States the battalion, on account of army regulations. The standing lumber was bought through an inter-allied committee, on which all the allies were represented. The negotiations for the purchase of forests were carried on through the French, who possessed the right of requisition and used it effectively, saving millions of dollars and defeating the swarms of speculators. The American army managed to acquire lumber enough to keep ahead of the operations, but towards the end it was becoming more and more difficult to find reasonably accessible tracts. Logging operations varied greatly. Last autumn the War Department planned to have four and a half million men in France by July, 1919, involving an immense increase in lumber requirements. It was planned to bring over twenty-four thousand additional forestry troops, or a total of forty-two thousand men.

The Pulpwood Wealth and Its Future

Mr. F. J. Campbell, of Windsor Mills, Que., the retiring president of the Canadian Pulp & Paper Association, spoke on the pulp and paper industry in its direct relation to the maintenance of forest materials. It was estimated, he said, that the standing pulpwood in the province of Quebec amounted to 300,000,000 cords, but the best authorities agreed that was little better than an average of guesses. Eliminating what was burned and otherwise destroyed, what was being opened up for settlement and cut for lumber, and deducting what was absolutely inaccessible and also commercially inaccessible, he guessed that the available supply was 150,000,000 cords, which was borne out to some extent by an estimate made in 1904 by Mr. J. C. Langelier, inspector of forest rangers for the province of Quebec. At that time Mr. Langelier estimated the available supply as 176,783,966 cords, and the consumption per annum at 526,865 cords, or sufficient to last on that basis over 334 years. The consumption had increased to 1,711,151 cords. During twelve years there had been cut 13,500,000 cords, reducing Mr. Langelier's estimate to 163,000,000 cords. Dividing the current consumption in 1916 of 1,711,000 cords into the available supply of 163,000,000 cords, the supply based on consumption in that year would last 95 years. In twelve years the cut had increased 3.25 per cent., and reckoning that the increase during the next twelve years would be in direct ratio to that of the previous twelve years, the consumption in 1928 would be at the rate of 3,000,000 cords, bringing down the available supply to 135,000,000 cords. On the same basis of consumption of 3,000,000 cords per annum, the available supply would be sufficient for 45 years more, providing the consumption showed no increase. The extraordinary growth of consumption was a matter for serious thought, especially as the supply was not increasing, while the consumption was growing with astonishing rapidity.

It was only a few years ago that the pulp and paper industry was south of the Great Lakes; it then developed in Quebec to the south of the St. Lawrence. Since then it had extended on a much larger scale to the north of the St. Lawrence, and already very large plants had been erected far to the north. As the supply of wood in the United States disappeared the mills dependent on it were being replaced by mills in this country. They must therefore count not only on the natural increase in the consumption of paper, but also on the centering of the pulp and paper industry in this country, and largely in Quebec, owing to the present supply of wood and ample water power.

Mr. Gillies Elected to Presidency

Mr. J. S. Gillies was appointed president, and Mr. Clyde Leavitt vice-president, the territorial vice-presidents and the directors being re-elected.

The following committee was appointed to bring about a standardization of fire protection: Messrs. J. B. Harkin, H. C. Johnson, J. H. White and Henry Sorgius.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Hemlock Wanted

Block of dry No. 1 and No. 2 Hemlock. Write the Elgie & Jarvis Lumber Co., Ltd., 18 Toronto St., Toronto, Ont. 2-4

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Spruce and Pine Wanted

1 x 4 Cull Spruce, and also Cull Pine. Hamilton Lumber & Coal Company, Ltd., Hamilton, Ont. 4

Hemlock Wanted

Peeled Hemlock pulpwood, 4 ft. lengths; state quantity and price, f.o.b. cars your siding. Box 845, Canada Lumberman, Toronto, Ont. 2-4

2000 Cords Pulpwood Wanted

Am open to buy all kinds of pulpwood F.O.B. Cars. State lowest price with point of loading. Advance furnished. Box 841, Canada Lumberman, Toronto, Ontario. 2-5

Lumber Wanted

We are always in the market for 4/4, 5/4, 6/4 and 8/4 Mill Cull Basswood, Spruce, Balsam, Poplar and White Pine. Correspondence solicited. The George N. Comfort Lumber Co., Rockefeller Bldg., Cleveland, Ohio. 4-t.f.

For Sale-Lumber

Shavings For Sale

Baled Shavings, car loads and small lots. The Boake Manufacturing Co., Ltd., Toronto, Ont. 2-5

Pine Slabs For Sale

For sale 1000 cords of soft pine slabs. Immediate delivery. Bishop Lumber Company, Nesterville, Ont. 3-4

Hemlock and Birch For Sale

2 cars of 2 x 6 Hemlock, dry.
1 car of 1 x 7 and wider dry Birch, Com.
Peterborough Canoe Co., Ltd.,
Peterborough, Ont. 2-4

Cut to order.
HENDON LUMBER CO.,
Halifax, Ont. 4

Butternut Logs For Sale

The logs from 18 butternut trees, the diameter at top 10 in. to 18 in. and butts 16 in. to 24 in. These trees can be seen by calling on Laird Bros., Dresden, Ont. 4

Maple and Spruce For Sale

Three cars 2" x 6" up; Mill Cull and Better, Maple, Dry, and about 1,000,000 ft. 1", 2", 3" Dry Spruce, 5th Quality and Better, also 400,000 ft. 1", 1 1/4", 1 1/2", 2" Log Run Pine, Mill Culls out.

FOR PROMPT SHIPMENT —

Apply: J. P. Abel, Fortin & Co.,
Maisonnette (Montreal), P.Q. 4

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts.
One car 5 x 5 Maple Boxed Hearts.
One car 6 x 6 Maple Boxed Hearts.
Seven cars Fir Doors.
Three cars Fir Columns.

GEO. C. GOODFELLOW,
Montreal, Que. 4

Pulpwood For Sale

Ten thousand cords of pulpwood situated within 200 miles from Quebec city, and ten million ft. of spruce and hardwood lumber, winter cut. We can fill almost any order. Quotations will be furnished on demand. Quebec Lumber Co., 98 St. Peter St., Quebec, P.Q. 3-8

Lumber and Fence Posts

I have the following, situated in Eastern Ontario, which I will cut to suit purchaser:

100 M. Basswood,
60 M. Pine,
50 M. Elm,
40 M. Spruce,
30 M. Soft Maple.

Also 35,000 Fence Posts.

Box 871, Canada Lumberman, Toronto, Ont. 4

Wanted-Machinery

Locomotive Boiler Wanted

Second-hand 30 horse power Locomotive Boiler, must be in first class shape. Apply Jennings & Bailey, R. R. No. 2, Bancroft, Ont. 4-5

Band Saw and Planer Wanted

Wanted second-hand band saw with tilting saw, suitable for ship work, also one 24" Buzz Planer.

CHARLES H. NADEAU,
Port Daniel East, P.Q. 4-6

Filing Room Equipment Wanted

Filing room equipment to handle 8" band saws, including automatic double cut band saw grinder, right hand. Also five-saw overhead slasher, including chains, mandrel and driving gear. Also set of from fifteen to twenty-five lumber rolls and gears. The Pearce Company, Limited, Marmora, Ont. 4

For Sale-Machinery

Jenckes Corliss Engine For Sale

One second-hand Jenckes Corliss Engine, 12 in. x 30 in. cut. Description and price on application to

Canadian Ingersoll-Rand Company, Ltd.,
Toronto, Ont. 2-t.f.

Equipment For Sale

No. 90 Berlin High Speed Matcher (Profilers).
No. 77 American High Speed Matcher.
Berlin Horizontal Slab Resaw.
Morse Horizontal Slab Resaw.
Morse Hopper Feed Horizontal Resaw.
Berlin, Cowan and C.M.C. Vertical Resaws.
Berlin 43" Triple Drum Sander (others).
Box Board Matcher.
Morgan No. 18 Open Back Nailer.
Berlin and Fay and Egan Double Surfer.

Box 865, Canada Lumberman, Toronto, Ont. 4

Locomotive For Sale

Fifty-ton standard gauge Climax geared locomotive in first class shape. Immediate delivery. Box 827, Canada Lumberman, Toronto, Ont. 4

Equipment For Sale

Boiler, H.R.T., 60" x 12". Government certificate for 100 lbs. steam pressure.
Engine—60 H.P., Peerless, high speed, self-oiling.
Generator, S.K.C., 30 K.W., 133 cycle, 2400 volt, 3 phase, with exciter.
Used as electric light plant. Hydro now installed. First class condition.
JNO. J. GARTSHORE,
58 Front St. W., Toronto. 4

Burner For Sale

"Muskegon" Water-space, type 16 ft. inside, 19 in. outside and 18 in. water-space. Splendid condition. Cheap. Box 869, Canada Lumberman, Toronto, Ont. 4-5

Equipment For Sale

1 MacGregor-Gourlay double head tenonner.
1 Mattison variety lathe, 24 in.
1 pony planer, 24 in.
1 elbow sander.
2 Reynolds screw drivers, No. 2.
1 15 H.P. C.G.E. motor, 220 volt.
1 50 H.P. C.G.E. motor, 550 volt.
1 35 in. Sturtevant fan.

Peterborough Canoe Co., Ltd.,
Peterborough, Ont. 24-5

Equipment For Sale

1 Portable Saw Mill, fully equipped with Trimmer, 3 saw Edger, Jack and slush chains.
1 J. I. Case Co. Traction Engine.
1 Twenty-five foot Towing Boat, with 12 H.P. gasoline engine.
A quantity of light steel rail, 8 x 12 lb.
23 sets logging sleighs.
2 Water Tanks.
1 Patent Snowplow.
3 teams heavy horses, and other logging equipment.

This outfit can be seen in operation at Norvar, Ont., after January 20th, and possession given March 1st, 1919. Will sell separately or collectively.

The Ontario Bark Company, Limited,
Huntsville, Ont. 2-5

Planer and Matcher For Sale

A twenty-four inch combined planer and matcher, first-class condition; thoroughly rebuilt; cheap. W. H. Sumbling Machinery Co., 7 St. Mary St., Toronto. 4-7

Tubular Boilers For Sale

100 H.P. Tubular Boiler, 125 lb. steam, used three months, only \$1,400.00, Winnipeg.
Two 100 H.P. ditto (never set up) \$1,550.00 each, Wisconsin.
Two 100 H.P. ditto (Saskatchewan), used short time, \$2,200.00 each.
Box 866, Canada Lumberman, Toronto, Ont. 4-5

Equipment For Sale

One P. Payette Co. lathe machine and bolter, lathe trimmer and sorting table, pulleys and belting. All in first class condition. Address Box 853, Canada Lumberman, Toronto, Ont. 3-6

19-t.f. Wycliffe, B.C.

Wanted-Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents.

Wanted position by first class band sawyer, single or double cut, nine years' experience; capable worker. Box 363, 119 Board of Trade Bldg. Montreal. 4-5

WANTED POSITION BY FIRST CLASS BAND SAW FILER, 20 years' experience; can furnish first class reference. Box 836, Canada Lumberman, Toronto, Ont. 2-8

LUMBERMAN, EXPERIENCED, all branches, wants position March 1st; ten years on road; salary or commission. Box 864, Canada Lumberman, Toronto, Ont. 4-5

COMPETENT ACCOUNTANT with ten years' practical experience in lumber business. Thoroughly experienced in logging, manufacturing, handling of yard stock, camp supplies and lumber concern store. Box 852, Canada Lumberman, Toronto, Ont. 4

CONTRACT WANTED by capable sawmill superintendent, many years' experience, to operate by the thousand mill cutting 50 to 100 thousand daily. Quantity and quality of production guaranteed. Box 867, Canada Lumberman, Toronto, Ont. 4-5

WANTED POSITION AS DOUBLE CUT BAND SAW FILER. 25 years on Band and Circular Saws. Also all-round millwright. Last 12 years full charge of mill and filing. Can furnish best of references. Reason for changing seasons shortening. Box 849, Canada Lumberman, Toronto, Ont. 3-5

POSITION AS SAWYER on left hand rig. Have had long experience on both circular and band saws. I am used to fast rigs, steam feed and steam niggers. Have been in the employ of the same company for six years. I want to change on account of short seasons. Any company that can offer me a sawing job for at least six or seven sawing months out of the year, I will gladly accept it. I am a married man with wife and family. Can furnish best of references if required. Apply to "Sawyer Tom," c/o Canada Lumberman, Toronto, Ont. 4-6

WANTED POSITION BY PRACTICAL LUMBERMAN: fifteen years' experience in all branches. Last ten years Sales Manager for large Canadian company. Box 785, Canada Lumberman, Toronto. 18-6

WANTED POSITION AS MILL SUPER-INTENDENT by first class man. Can get results. 20 years' experience. Can start first February. Box 837, Canada Lumberman, Toronto, Ont. 2-8

LUMBER INSPECTOR, experienced in Hardwoods, Hemlock and Spruce, desires position as Shipper or Yard Superintendent. Satisfactory references furnished. Address Box No. 854, Canada Lumberman, Toronto, Ont. 3-4

ADVERTISER WITH 25 YEARS' EXPERIENCE, erecting and care of sawmill and woodworking machinery open for employment. Would make yearly contract with manufacturer to go abroad. Box 846, Canada Lumberman, Toronto, Ont. 3-4

Wanted-Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents.

WANTED—YOUNG MAN, single preferred, with experience in inspecting, buying and selling Hardwood Lumber. Splendid opportunity to get into business on salary and profits; with or without investment. Opportunity to advance. Box 868, Canada Lumberman, Toronto, Ont. 4

WANTED — ENERGETIC LUMBER SALESMAN with successful experience in marketing to retail and industrial trade, soft and hardwood lumber and timber. Give names of present and former employers. Salary and percentage in profits. Address, Room, 32, Hochelaga Bank Bldg., Quebec, Que. 4-5

Business Chances

Timber For Sale

To sell—400 acres of heavy mixed timber; convenient to C. N. Ry. and Toronto markets. Box 191 Arnprior, Ont. 4

A firm owning an up-to-date sawmill, capacity about thirty-five thousand feet per day, would like to get in touch with parties owning Hardwood or Spruce timber, with a view to making an arrangement for the manufacture of same. Box 861, Canada Lumberman, Toronto, Ont. 4-5

A SNAP—FOR SALE

Planing Mill, Saw Mill and Lumber Yard. First-class business. Mills equipped with latest and best machinery. Power; both steam and hydro. A nice residence and office, sheds and barn can be bought very reasonable.

Apply to J. J. BERGER, 4-7 New Hamburg, Ont.

TENDERS WANTED

Sealed tenders will be received until February 25th for the following lumber, i.e. cars Montreal:—

808,000 ft. of 4th quality and better Spruce, 1 x 4 in. and up, average width 6 3/4 in., 6 to 16 ft. long, average 10 ft. and over, all 1916 sawing. If unable to tender on 1916 sawing state length of time lumber has been in pile.

The James Shearer Co., Limited, 225 St. Patrick St., Montreal.

TIMBER FOR SALE At a Sacrifice Price

Two tracts, containing 213,000 acres, traversed by good rivers to bring the logs down to the Canadian Pacific Railway, on the North Saskatchewan River, at Mountain House in Western Canada; on which there is a very large amount of sawmilling White Spruce and Pine timber, an immense amount of small Spruce, Pulpwood and Boxwood timber.

A large modern sawmill and full equipment of woodworking machinery may be bought very cheaply with the timber, as a going concern.

For particulars, maps, estimates and information regarding this large timber proposition, write or telegraph to

J. S. MacEWEN, Owner, c/o Northwestern National Bank, Minneapolis, Minn. 4-5

For Sale

Building and Machinery of good Double Cut Band Sawmill, well equipped with steam feed, canter, loaders, etc.

If you want a good mill, address Box 762, Canada Lumberman, Toronto, Ont. 15-t.f.

MILL AND LIMITS FOR SALE in New Ontario.

Would sell outright or half interest. Excellent opportunity for a lumberman. Reason for selling, short of capital. A fortune awaiting the right man.

Address, J. Apartment 3 A, 578 Dorchester St. W., Montreal, Que. 2-t.f.

For Sale—Valuable Saw Mill

Stave and heading plant in eastern North Carolina, accessible to both pine and gum timber, water and rail transportation, brick dry kilns and all other appointments of a first-class property. Stave and heading machinery recently newly installed. Address,

"STAVES & LUMBER," Box 167, Burgaw, North Carolina. 1-4

Agency Wanted

Gentleman living in South Wales, Great Britain, with a large pit prop and colliery timber connection, wishes to act as distributing agent for a lumber merchant or exporter in Newfoundland or elsewhere, and would also purchase loads of pit props cut to specification. Advertiser would come over and interview merchants anxious to do business. J. Griffith Jones, Colliery Timber Merchant, Llanelly, S. Wales, Great Britain. 1-4

SPLENDID TIMBER LIMITS FOR SALE

One parcel consisting of 41 claims in British Columbia, containing 690,403,000 feet of mixed Douglas Fir, Red Cedar, Spruce, Yellow Cedar and Hemlock. Over 40 square miles. 26,092 acres. Quantity of each kind of timber will be given on application. Splendid property, one of the finest in the Dominion. Timber for sale only, subject to Government license. Price \$650,000. Liberal terms of payment. Will take Victory Bonds up to half or three-quarters of the amount. This timber will be sold subject to inspection. Must be sold within the next three weeks.

Also other smaller properties for sale in Canada.

Address S. G. Read & Son, Limited, 129 Colborne Street, Brantford, Ontario, exclusive agents. 4-5

Miscellaneous

Tenders for Timber on Lower French River Indian Reserve

Sealed tenders addressed to the undersigned and marked on the envelope "Tender for Lower French Timber" will be received until noon of Wednesday, the 26th day of February, 1919, for the merchantable Basswood, Elm and Birch timber on the Lower French River Indian Reserve, in the district of Parry Sound, in the Province of Ontario.

Tenderers should state the amount of cash bonus they are prepared to pay for the timber over and above Crown dues payable under sworn returns furnished by a licensed culler. An accepted cheque on any Canadian chartered bank for ten per cent. of the bonus tendered should accompany each tender, the balance of the bonus to be paid within thirty days from date of notification of acceptance of tender.

An annual license will be granted to the successful tenderer, and five years will be allowed for the removal of the timber under the regulations of the Department.

Any further information desired may be obtained upon application to the undersigned, or to Alexander Logan, Indian Superintendent at Parry Sound.

The unauthorized publication of this advertisement will not be paid for.

DUNCAN C. SCOTT, Deputy Superintendent General of Indian Affairs.

Department of Indian Affairs, Ottawa, January 17, 1919. 3-4

In order to close Estate in Town of 3,000 population in Province of Quebec on G.T.R., Factory now making Sash and Doors, House Trim, etc., 125 Horse Water Power, Dry Kilns, etc., is for sale or would consider organizing stock company with party having some capital capable of managing the business, or plant could easily be converted into Handle and Woodware factory. Unlimited supply of birch, maple, and beech lumber in vicinity. Party with capital thoroughly understanding the manufacturing and marketing of these lines would be offered an attractive proposition.

Interested parties address Box No. 844, Canada Lumberman, Toronto, Ont. 2-7

Standing Timber For Sale

The undersigned offer for sale timber limits at Cranbrook and Lamb Creek, B.C. Said timber having been estimated by James D. Lacey & Co., of Seattle, copies of said cruise, price and terms of sale, can be had at the office of J. H. King, Minister of Works, Victoria, B.C.

Summary of Cranbrook Unit

Red Fir	5,824,000 ft.	10%	Tie timber

Review of Current Trade Conditions

Ontario and the East

The situation in regard to all lines of lumber has not materially changed during the past fortnight. Some wholesalers report that there is a little freer movement than there was in January and that the number of enquiries is increasing. The shipment of white pine across the border is moderate, but business is not heavy. Western stock is in fair requisition while shingles are holding their own in price. There is very little trade being done in hardwoods as most of the consuming plants are being stocked up and any buying going on is attributable to snaps or special bargains which have been on the market lately owing to the sale of aeroplane stock and other woods that have been used in war work.

The convention of retail lumbermen in Toronto, attracted representative dealers from the north, south, east and west and various reports were presented. In some towns it is declared that the prospects for building are exceptionally bright. In others there are a number of enquiries and the situation is being felt out, while in a few the housing plan is being taken hold of energetically and home-building will be pushed to the limit. There is a feeling of confidence that while trade may not revive as soon as some anticipated and building operations may to a certain extent be held up, owing to high prices, everything will come out all right in the end.

A general review of conditions will be found in the comprehensive reports of President Power at the Canadian Lumbermen's Association gathering in St. John, and in President Patterson's remarks at the Retail Dealers' sessions in Toronto. Down east there is much more snow than in Ontario, where up to the time of wiring there has been no fall of the beautiful in many parts of the province. The mild weather has been causing lumbermen considerable anxiety.

No new developments have been reported in the export trade, but there is every assurance when the time arrives and ocean tonnage is provided, Canada will share in a just proportion of any business that is offering.

In the east some big sales of spruce have taken place, one mill closing a contract to dispose of 5,000,000 feet of next season's spruce cut. Other companies were expected to make favorable sale arrangements regarding next season's output at an early date. Woods operations have been going on rather slowly. On the whole the cut will not equal last season, owing to the outbreak of the flu last fall, the shortage of men in the early winter months, the exceptionally soft weather and the general uncertainty created by the "switch-over" as the transition from a war footing to a peace basis is frequently termed. Prices in all lines of lumber are holding firm and cannot consistently come down while everything tending to its production and manufacture keeps up to the highest degree.

It is predicted that the quantity of lumber brought out of the woods this winter will be small, even compared with the cut of last year, which was thirty per cent. below normal. Builders will be faced with a depleted market. The cut for the last two winters has been below the usual, with the result that while it is customary to enter the year with an extensive supply of dry lumber on hand from the year before, this season there is not a large stock.

On the top of this there will probably be a greater export than ever before. There are no figures at present as to the demands from overseas, but good news should be forthcoming in the near future.

United States

Business on the whole is still on the quiet, and prices are about the same with a slight tendency to reduction in certain lines. Factories in the east are beginning to get busy especially those making agricultural implements, harrows, drills, etc. Lumber for shipbuilding purposes continues in demand, according to hardwood dealers, but the furniture trade is negligible. In some cities, particularly in New England States, the building prospects are discouraging on account of labor troubles and prices have been weakening on common lumber of all kinds. Retail dealers are not buying very heavy at present except for immediate use.

Conditions on the whole are unreliable so far as many woods are concerned and prices vary considerably, according to the locality in which sales are made.

Writing to the "Canada Lumberman," a leading Boston firm says: "We have no doubt that prices all round will have to come down gradually during the next six months until the time industries feel that it is safe to proceed with a reasonable development. Then it may be that we shall see quite an active market for some time. In the

eastern market, west coast spruce and fir have dropped \$5 or \$6 per thousand lower than similar grades in eastern spruce, particularly in the larger sizes, and nobody feels quite sure what figures to ask. There is no surplus of spruce in the east as the mills in that section are not operating to any extent and probably will not do so for another month. One wholesaler expresses the opinion that if the plants were running, present quotations could not be maintained. On the other hand he points out that the cost of production is still very high and that no business can be done to-day on a profitable basis if one considers the present cost.

While there has not been any particular spurt in the demand for hardwoods, the market is steadily broadening. Practically all the important consuming industries are more actively in the market and the requirements of the furniture manufacturers especially are said to be making themselves felt. Vehicle and agricultural implement interests are also buying on a rather large scale; there is some business in railroad material transacted, and even the building trade is picking up, owing to the unusually open weather prevailing in most sections of the country, and is taking comparatively sizable lots of hardwood flooring and interior trim. But many builders are still hesitating and staying off the market, uncertain over what the future may bring. They expect not only a decline in building material prices generally but also in wages for both common and skilled labor. So far as a decline in hardwood lumber prices is concerned the student of conditions knows such a thing to be most improbable, because lumber can not be produced any cheaper than at present for a long time, and because the Government is not holding enough surplus hardwood lumber to disturb the market in the least should it be marketed—a development that many builders seem to bank on.

General business continues quiet and no real activity, either commercial or industrial, is expected to develop until price levels are steadier and more in keeping with the consumers' ideas of what they ought to be. Already has the pendulum begun to swing back forcefully and prices of various vital commodities have tumbled to lower levels.

Great Britain

There is no change to report in the general situation of the hardwood market. A quiet movement of business is in progress, but the demands show little expansion, consumers being content to await developments, which may provide a clearer conception of the future course of the market than the indefinite view that is presented at the present time.

It is understood that the revision of rates for the American lumber that is held in Government hands has taken place, and probably some increased business in these goods may be expected. Generally, however, the sales from these stocks are slow, the conditions of unstable rates, liable to monthly revisions, having been all against their speedy clearance.

Speaking of the import trade the "Timber Trades Journal" says: "We have received letters from Mr. Frank R. Weston, of Midland, Ont., who is addressing a number of firms here with regard to a greater business in wood goods from Canada. Mr. Weston suggests that representatives of the trade here might visit Canada and see for themselves how thoroughly equipped are the mills to meet every requirement. Without going too fully into the subject dealt with by Mr. Weston, we are certainly of opinion that we can do, and ought to do, a much larger trade with Canada, and as the freight question is not a serious one, the import of Canadian woods, both of high and low grades, should show a continued increase year by year."

One topic of outstanding interest has occupied the trade—the attempt on the part of the present Government timber buyer to form a kind of importers' association to operate in foreign purchasing when the present control ceases to exist. And it is not the importers only who are interested; the merchants and consumers feel that they also are vitally concerned. Without discussing at the moment the particular terms proposed by Mr. Meyer, or endorsing his scheme in any way, we cannot but feel that, from a national point of view, the country would benefit if there were less competition as regards prices among British importers to secure foreign wood. In pre-war days the shippers often secured the very highest prices which the English market would stand; but, on the other hand, when there was an excess of supply over demand, the English buyers turned the tables, and paid the very minimum which the sellers would accept; the one state of

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

affairs on the whole counterbalanced the other, and the results were satisfactory. There were many buyers competing for the wood, and many shippers competing to sell. But all this is changed. For years to come there will be an excess of demand over supply, an excess so great that British consumers will be heavily penalized, unless some extraordinary precautions are taken. The Government timber buyer

has foreseen the probability, and he is the first in the field with his proposals. There is no disguising the fact, however, that the trade is to a great extent distrustful. The members see very plainly the important position which the Government buyer would hold, and as they look upon the matter as a national one they do not care to see so much power placed in a single hand.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Montreal States the Outlook Is Improving

There is a brightening in the trade outlook in Montreal. At this period of the year one does not look for a large volume of business, but the important feature is that it is picking up. Montreal is in bad need of additional housing, and the Federal Government scheme is likely to give a stimulus to the building of a large number of industrial dwellings, particularly as the Provincial Government will supplement the Federal grant of money. The city of Outremont, a suburb of Montreal, has also under consideration the construction of a large number of the better class houses. Firms doing a retail lumber and sash and door business report that trade is opening up in good shape and that prospects are satisfactory.

Several important projects in the development of the pulp and paper industries are reported from the province, particularly in the St. Maurice Valley district.

The placing of orders for 2,840 cars for the Canadian National Railways is of importance to Montreal, as many of the cars will be built here, although Southern pine largely enters into the construction of the cars.

Firms with United States connections state that orders are slow, but more inquiries are coming to hand.

The building permits for January totalled \$60,154, a very small total, compared with \$116,110 in the corresponding month last year. This does not look encouraging, but for all that there is a feeling that we are on the eve of better things.

The government has released additional space for export, and although, of course, the port is closed, the action is an indication that considerable tonnage will be available when navigation opens.

Advices from England state that the Controller of Timber Supplies is open to consider applications for permission to purchase fir staves from abroad for shipment to the United Kingdom and to recommend licenses for the import of staves so purchased. Permits to purchase will only be granted subject to tonnage being arranged through the Timber Supplies Department. The Controller has now completed arrangements for liberating the national stock of imported hardwoods held by the Timber Supplies Department, through the usual pre-war trade channels. Prices will be revised from month to month. In a letter received from an English firm it is stated that, in their view, the Scandinavian countries will not be able to supply the large demand for the United Kingdom and that reliance must be placed on Canada for heavy shipments.

St. John Reports Firmness of Lumber Values

It is believed that prices of lumber cannot fall this year, but will hold their own and in some cases will have to advance in order to keep pace for overhead costs. Leading manufacturers of spruce are asking \$5 more per thousand than in 1918, and claim that even then they will not reap as much profit as they did last season. It is declared that for the coming year the trade will receive \$35 for scantling 6 in. and under in width, and in length from 9 ft. up. For 7 in. and 8 in., the selling figure will be around \$40, for 9 ft. and 10 ft.; and \$45 for 11 ft. and up to \$50. These figures apply to merchantable, the thickness being 2 in. and 3 in.

In lower St. Lawrence ports there are several million feet of deals to be shipped overseas and this stock will move as soon as ocean tonnage is provided. One leading authority stated that there must be 40,000,000 feet yet to transport across the pond. Stiffer quotations are prevailing on stocks. On the average quality of deals from 5 in. to 11 in. in width and 6 ft. to 16 ft. in length, at lower Quebec ports, the price is \$35 and \$36; 5 in., 6 in. and 7 in. wide, \$38; 9 in. and up \$40. The average length of these deals is from 12 to 13 feet. The cut in New Brunswick, while in some sections it will be equal to last year, will on the whole fall short of what it was in 1917.

In regard to the export business different views are expressed. Some are most optimistic, others are inclined to accept conditions philosophically and a few are pessimistic. Speaking to the "Canada

Lumberman," one eastern manufacturer said that he thought nothing could be done in the export of lumber to Europe until the present strangle-hold that has held sway and is still in effect has been broken. He said that the Imperial Government in England have one purchaser for all the lumber for the United Kingdom, France and Belgium, with the result that we have only one customer to sell to so far as the export trade is concerned. "Until this thing is relaxed, there is absolutely nothing we can do in this country to stimulate the export business. We are obliged to accept the prices dictated to us by this purchasing power, or else hold our lumber as best we can. We have no doubt at all but if free trading were allowed in England, business would be stimulated at once, and we would have a fair market and fair competition for all the lumber that we produce. The thing that has to be done now is to take some united action with the powers that be to get the situation in Europe changed," he added.

Canada Can Supply Lumber for Europe

Interviewed regarding Canada's probable contributions toward the timber requirements of Europe during the coming year, Sir Douglas Cameron, of Winnipeg, former Lieut.-Governor of Manitoba, who was in Toronto recently, gave it as his opinion that this country will have no difficulty in filling all European contracts which have been undertaken and any further orders which may be placed here.

Despite the fact that home consumption of timber is bound to increase with the resumption of building operations, and that this year's cut east of the Great Lakes has been reduced almost fifty per cent. by shortage of labor, influenza and lack of snow, Sir Douglas expressed complete confidence in the ability of the Canadian lumbering industry to fulfil all demands which may be made upon it.

Given ordinary conditions in the camps next winter, he considered that Canada should be able to furnish the bulk of the timber used in France and Belgium in the work of restoration. That the demand upon the country would be great he did not doubt, in view of the depletion of French and British forests during the war, and the probable inability of Scandinavia to cope with such a huge order.

Sir Douglas was recently re-elected a director of the Canadian Lumbermen's Association.

No Lumber from Russia for Building

The forests of those parts of Russia under Bolshevik control will no longer furnish lumber for building purposes in the rest of the world, unless something is done to eliminate the Bolshevik control. The timber trade, outside of the White Sea district, has been dealt a death blow by the promulgation of a decree from the Soviet government which forbids exports of Russian woods, and declares that all private lumbering must be stopped forthwith.

This decree, which affects all districts of Russia under Bolshevik control, declares that all work in connection with forests and trade in timber and all wood manufacturing will be taken over by the local Soviets. A ban on what is called "exploitation by the capitalist class at the expense of workingmen" is ordered. Reports indicate that the decree has already cost lumber interests, particularly those of the Scandinavian countries, heavy losses. Norwegian lumbermen are hard hit as much of their properties, representing millions of crowns, are in Bolshevik territory.

Shortage of Ships Hinders Export Trade

Cable advices from London reaching Vancouver indicate that shortage of tonnage is the main difficulty standing in the way of large timber orders by the British authorities in British Columbia. Strenuous efforts are being made to overcome this difficulty, says the cable, and the Department of Marine at Ottawa asked that every effort be made to provide Canadian vessels. If that is possible Hon. T. D. Pattullo, Minister of Lands, has suggested that foreign vessels be chartered, if practicable to do so, to supply the ships.

No Milk Troubles Where Klim Is

In the camp where Klim is regularly used milk troubles are non-existent. A full supply of fresh separated milk is available at a moment's notice for cooking and baking, for tea and coffee, or for drinking.

Klim is in the convenient form of a dry powder that will not freeze in the coldest weather, costs little to ship, takes up little space, can be stored in any dry place.

Klim is an inexpensive milk supply that causes no trouble and never fails you.

Drink it yourself as a test, you will relish its natural flavor.

Order Klim with your grocery supplies. In 10-lb. tins, 6 to a case.

How Costs in Camp Supplies Keep Up

The cost of operating a logging camp during the present season is fully as high as it was in the winter of 1917-18. Wages have advanced from \$5 to \$10 a month over a year ago, and the outlay for "keep" is from 90c to \$1.10 per day for each man in the camp. Twenty years ago wages ran from \$10 to \$15 a month, while board averaged from 25c to 35c a day; now a single meal costs this sum.

The situation in regard to labor in the bush has changed materially since the close of the war, and now all the men that are desired by the various logging companies are available. During the past two or three years operators have had to put up with all kinds of indifferent, inefficient and independent labor. This phase is now altered so that from the help standpoint there is a very decided improvement. During the past winter and the season before that, it was estimated that ordinary labor was only 65 per cent. efficient, and that it required three men of the class then available to do the work that was performed by two experienced and capable men before the war. There were not only the increase in the disbursements for board, and the augmented wage scale, but there was a sad decrease in efficiency.

The termination of European hostilities has brought about some amelioration that will be welcome, and not the least is the better type of help and a more abundant supply at the various centres. Men who were released from munition works and other war activities are returning to their former jobs, and if weather conditions had been favorable during January a large amount of timber would have been hauled out to the streams. As previously stated in these columns, the release of men came too late to materially affect the season's cut in Ontario and Quebec, as it was well into December before these fellows were available. However, the moral effect of the whole situation has been to "ginger up" some of those in the camps and cause work to go ahead more expeditiously than it otherwise would.

Wages have not fallen nor is it likely that they will do so until there is a shift in economic conditions. The cost of living, house rents, clothing, shoes and other requisites must first go down before any readjustment of remuneration becomes a direct problem.

In the Annual Number of the "Canada Lumberman," which was published in August last, occasion was taken to present some figures on the cost of camp supplies, showing what the outlay for them was previous to the war and giving the values that prevailed in June, 1918, four years later. The advances ran all the way from 75 to 150 per cent. on the major items of expenditure. It has been said that figures are dry and uninteresting at all times, but when presented in tabular form they tell a tale and present facts in a more convincing and logical way than by any other means. The "Canada Lumberman," therefore, believes that the accompanying schedule showing what was paid for supplies in June, 1914, June, 1918, and February 1st, 1919, will be read with a great deal of interest. It is noted that the decreases since the close of the war have been few, while in some instances there have been advances. On the whole it will be found that figures are relatively the same as they were in June last, even if there has been a fall in some lines. The expense of horse feed has gone up amazingly. Hay is now selling on the average of \$20 to \$25 per ton, which is a rise of 100 per cent. over the figures of a year ago. Oats are bringing about the same—60 to 70 cents—as in the winter of 1917-18. Even if men can be boarded a few cents cheaper during the present logging season than they were a year ago—which is not the case in many camps—any saving effected is more than offset by the upkeep of horses, so that in the aggregate it is going to cost more to take out timber during this winter than it did twelve months ago. Maintenance is practically the same, but wages have advanced from 10 to 15 per cent., and this has held even if labor is much more plentiful. The lumbering and logging companies are not disposed to take advantage of any situation like the present to pinch or economize on the wage question so long as there does not seem much probability of an immediate diminution in the cost of living.

Here are the prices of some camp supplies which will serve as a timely illustration of what it costs to feed men in the bush.

	June, 1914	June, 1918	Feb., 1919

More Attention to Export Lumber Needed

That the Canadian lumber trade will experience some difficulty in securing its share of orders for reconstruction work in Europe unless more attention is paid to the requirements of the overseas market, is a warning given by the Commission of Conservation at Ottawa to Canadian exporters of lumber. Lumber from Russia and Sweden, it is pointed out, conforms more to the size requirements of the British market, and the chief difficulty Canadian dealers must overcome is the one relating to the "scant size" of lumber shipments generally for this side of the Atlantic. "As far as British Columbia is concerned," says the statement, "the bulk of lumber heretofore imported by the United Kingdom has been in the form of large timbers of the grade known as merchantable for heavy structural work, or for re-sawing into any size. If British Columbia is to enlarge her timber trade then a range of all grades and sizes, including merchantable, but not the lowest grades, must be dealt in."

"If Canada," the report continues, "can deliver timber in the various grades sawn to British standards at Swedish prices, then she can do business in a broad and general way."

This, it is pointed out, is practically impossible with freight rates at the present high level, but in two years freight rates may be low enough for Canada to compete with Sweden and Russia, provided we manufacture to the requirements of the British market.

The Log Jack for Heavy Work

*New Double Powered
Log Jack*

The accompanying illustration gives a correct idea of our new Double Power Log Jack, designed for hauling heavy timber into Saw Mills.

GEAR.—The large Gear Wheel is 36 in. in diameter, with 72 teeth, 4 in. face, and 1½ in. pitch.

PINION on intermediate Shaft has 13 teeth, 4 in. face and 1½ in. pitch.

PAPER FRICTION is 10 in. in diameter and 10 in. face. Iron Friction Pulley is 30 in. in diameter and 10 in. face.

CHAIN is made of extra heavy steel, and the bunks have steel spikes, the whole outfit being calculated for heavy logs.

The Past Year Was Fairly Satisfactory One in All Branches of Wood Products Business in Canada

Mr. W. T. Mason, of Mason, Gordon & Co., wholesale lumber and timber merchants, Montreal, writes the "Canada Lumberman" an interesting review of conditions during the past year. Mr. Mason says:—The year 1918, which we have just passed out of, was, taken on the whole, a fairly satisfactory one for all branches of the timber and lumber trade, for, while costs of all kinds were the highest ever experienced by the manufacturers, the prices that were realized were also the highest in the history of the trade, and the requirements of the different countries engaged in the great war, now fortunately at an end, were so great that the shipments throughout the year were only limited by the abilities of the railways and other transportation companies to furnish cars and boats.

The programme of shipbuilding carried out in both Canada and the United States, under which hundreds of wooden vessels, both sail and steam, were built, called for tremendous quantities of high riced timbers and kept every mill on the Pacific Coast and many in the interior on their tip toes to supply these requirements. This, with the timbers required for erection of buildings required for the manufacture of munition and other war supplies, made up to the mill men for the trade lost, or rather, deferred, through the cessation of all public works and of practically all railway construction.

The call for material required for construction of aeroplanes, in which fir, spruce and white pine were used, was very urgent, and no expense was spared in getting it out. The wood most desired for this work was the silver spruce of the Pacific Coast, but clear edged grain fir was used as fast as it could be manufactured, and large quantities of the best of our Eastern white pine deals were cut up and shipped overseas.

The prices paid for this material were very high, but considering the remarkable quality demanded, not beyond its value, and taking as it did so much of the best end of our best grades, helped materially in the maintaining of firm prices during the year.

Some Material Advances Looked For

In the retail yard and building trade, while at no time during the year was there any great volume of trade in sight and no really large purchases were made by our customers, the orders kept coming in for a carload here and a few carloads there, the result being that the aggregate of business closed for was large—1918 being for us our best year, with the exception of 1913, for quantity sold, and owing to high values the largest for value.

Owing to regulations placed by the United States on the building trade, the export of lumber and shingles across the border suffered somewhat, and on a couple of occasions during 1918 prices softened somewhat for short periods, but for the year may be considered as having been firmly and strongly held. While at present prices for some lines are considerably easier, we look for the higher quotations to be with us again before spring, and after then expect to see some very material advances, which will bring prices for Pacific Coast stocks to top levels of 1918, and for the Eastern output, that is, for pine and hardwoods produced in Ontario, Quebec and the Maritime Provinces to very much higher levels than ever before.

A feature of the past year's trade was the sale of considerable quantities of British Columbia woods in the lower grades of fir, spruce, larch and cedar boards and scantling in the Eastern market.

This was made possible by the diminished prairie trade due to the poor crops, and to the extremely high prices of the lower grades of Eastern lumber. This trade, however, can only be regarded as temporary, as with normally good crops the prairie trade will absorb these grades as it has done in the past, and with the return to normal times and costs the price of the eastern grades will naturally react to lower prices, and in this case the high freights always in force from British Columbia to Ontario and eastern points will absolutely prevent it.

Spruce Most "Controlled" of All Woods

A leading Liverpool, Eng., firm of timber merchants, in writing to a Toronto wholesaler say: "We do not think that you should come over here at the present time in the hope of doing any business, because spruce is the most "controlled" of all woods. The government buyer has bought such immense stocks of spruce which are now being doled out to the trade in small lots at very high prices, that there is no earthly prospect of the Controller allowing any private importing until such time as his confrere the buyer has been able to get out with a whole skin, even though the poor consumer may get it in the neck meanwhile. Governmental control is showing signs of gradual removal, but we do not think there will be much chance of importing even hardwoods until summer at the earliest."

The Different Types of Leather Belts

The Graton & Knight Mfg. Co., of Worcester, Mass., oak leather tanners and belt makers, have issued a finely illustrated catalogue in two colors, showing the different processes of belt-making from the receiving of the hide right through to the finished belt.

The catalogue consists of 124 pages and cover, besides a special three-page insert of their factory. It not only illustrates and describes the different products made by Graton & Knight, but shows what can be accomplished with unsurpassed facilities for the manufacture of high grade leather belting and leather specialties. The belting section fully explains the characteristic qualities, the particular differences and the capabilities of their different brands of belting. It also embodies mechanical rules, tables and other information which should be of value in determining the most efficient belt for any drive or in assisting with other transmission problems.

Graton & Knight are the manufacturers of the Standardized Series Leather Belts which they have advertised extensively in the national and trade field. Besides belting they also make cup packings, pump leathers, automobile leathers, blanket straps, trunk and suitcase straps, trunk handles, halters and other leather products such as insoles, outsoles, counters, box toes and Goodyear welting for the manufacture of shoes. The company will gladly furnish anyone interested with a copy of their catalogue.

On Research Work for Reconstruction

A force of nearly 400 employees of the United States Forest Products Laboratory at Madison, Wis., is working in co-operation with the University of Wisconsin, on research work in connection with reconstruction.

The laboratory's war time achievements are unique in that practically all of them can be turned effectively to uses of peace. For example, the laboratory demonstrated the practicability of artificially drying freshly cut airplane stock, instead of storing it for a year or more in sheds to season. At the time of the signing of the armistice aeroplane stock was being dried by the laboratory method faster than was necessary to meet the demands of the manufacturers.

More than 300 kilns of the type developed by the laboratory in various parts of the country, which were used in drying aeroplane material, gunstocks and vehicle parts, for the use of the government in war, can now be turned to account in the pursuit of peaceful occupations.

May Be Difficult to Save Logs

The Munitions Board has been looking for a place to store 30,000,000 feet of logs in the neighborhood of Prince Rupert in fresh water. These logs are already in the water and at this time of year the teredoos are particularly active and very soon spoil the timber. For that reason quick action is necessary. Most of these logs are at the Queen Charlotte Islands, but there are also some here and at other points. Since the British Government is to take a quantity of lumber for reconstruction work in Europe it is expected that an early start will be made in cutting the logs, but as there are something like 100,000,000 feet either in the water or in the woods in the Prince Rupert district, including the islands, there will have to be more orders than are at present in sight if the logs are to be all saved.

Would Use Hydroplane for Forests

The use of hydroplanes for the protection of forests against fire is strongly recommended by the superintendent of the Forest Protection Service of the Quebec Provincial Government in his annual report. C. J. Hall, the superintendent, states that after a conference held with Major Kennedy, of the Royal Flying Corps, held in Montreal, he is of the opinion that a hydroplane was able, in the course of a day, to keep surveillance over 8,000 miles of forest, owing to the elevation at which it could be flown, provided the weather was suitable, and in case of the discovery of fire, the aviator could return to a base and secure fire fighters with their apparatus, and take them to a lake nearest the scene of the fire. He points out that a hydroplane could make a landing on any lake that is 450 yards long, and that as the province abounded in such lakes, the service could be made highly efficient and effectual.

Mr. Hall also reports that the number of forest fires in the Province of Quebec, had considerably decreased during the past year. There had been 430 fires, which had devastated 23 square miles of forest lands out of a total of 48,000,000 square miles, which were being operated for forestry work. The total damage had amounted to \$5,557, of which \$2,000 was attributed to the railways. He expressed thanks to the various fire protection associations, who had done invaluable work, and had by their vigilance reduced the number of fires considerably, while individual foresters had also shown much more care than in former years.

EDGINGS

Ontario

W. J. Holden, Collingwood, Ont., has purchased a site and intends starting work in the near future on a planing mill and sash and door factory.

The Thos. Pink Company has been incorporated with head office at Pembroke, Ont., and capital stock of \$200,000, to carry on business as manufacturers of lumbermen's tools, etc.

To continue timber production after the withdrawal of the Canadian Forestry Corps arrangements have been made for the transfer of horses, buildings and machinery equipment and the stores of each unit of the corps to the Controller of Timber Supplies of Great Britain.

The Agawa Timber Company Ltd., has been incorporated with head office at Sault Ste. Marie, Ont., and capital stock of \$20,000, to carry on business as lumbermen, saw and planing millers, and manufacturers of lumber and woodenware. The provisional directors are T. C. Dinsmore and A. G. Fulton, of Sault Ste. Marie.

The Elliott Lumber Co., Ltd., has been incorporated with head office at New Toronto, Ont., and capital stock of \$20,000, to carry on business as manufacturers and dealers in all kinds of lumber, timber, shingles, cedar posts, etc. Among those interested are J. W. Elliott, G. W. Wells and W. M. Patterson, all of New Toronto.

A resolution strongly urging the government to give full consideration to the claims of the shipbuilding industries as a means of providing employment for returned men and many others was passed by the Board of Trade Council, Toronto. Another resolution was passed endorsing daylight saving as a Dominion-wide measure.

Wm. Baird, sales manager of the Canada Machinery Corporation, Galt, manufacturers of woodworking machinery, died recently in Toronto. He was widely known and for many years travelled for the A. R. Williams Machinery Company, of Toronto. He was an ex-alderman and for the past two years occupied the position of school trustee in Galt. The news of his demise will be learned with very great regret.

J. J. Carrick, 13 Cumberland Street North, Port Arthur, Ont., has plans in progress and construction will commence in the spring of a pulp and paper mill to cost \$7,500,000. The architect and engineer is H. S. Ferguson, 200 Fifth Avenue, New York City. The Hydro Commission has promised that the Nipigon power development scheme will be proceeded with and be able to supply 3,000 h.p. by the spring of 1920.

Several problems arising out of the Workmen's Compensation Act, were discussed at the recent session of the Ontario Retail Lumber Dealers' convention in Toronto. The legislation on this Act does not fully protect the employer, it was claimed. An employee who had sustained an injury could call in any doctor he chose and not consult his employer in the matter. A resolution was passed to ask to have this condition rectified.

At a recent sitting in Toronto to enquire into the price of book paper, Commissioner Pringle, of Ottawa, heard some evidence. It was decided that the investigation be proceeded with further and that the books of other plants than those of the Provincial Paper Mills Company, which have already been examined, should be gone into. Auditor Clarkson will, therefore, probe into the books of the Riordon Pulp & Paper Company as ordered by Mr. Pringle.

The report of the Provincial Paper Mills, Toronto, for 1918, shows a slight decrease in net profits, which are given as \$404,142, as compared with \$463,898 in 1917. After writing off \$75,000 for depreciation, paying \$119,000 as a 7 per cent. dividend on the preferred shares and \$80,000 as a four per cent. dividend on the common, and making one or two other small appropriations, the surplus at the end of the year is \$852,406. The balance sheet shows an increase of some \$300,000 in assets, which total \$5,882,874, as compared with \$5,552,278 at the end of 1917. Current assets total \$1,162,184, compared with \$911,744 a year ago, and consist of \$96,000 cash, \$101,368 bills receivable, \$397,716 accounts receivable, \$65,000 in government war bonds, and \$502,000 in investments.

Eastern Canada

The Black River Pulpwood Company, of Montreal, P. Q., have obtained a Dominion charter.

The N. S. Shipbuilding and Transportation Company, Halifax, N.S., are laying the keel for a three masted schooner.

The Warwick Lumber Company, of Warwick, P. Q., have been registered, incorporating F. O. Baril, L. Baril, D. Baril and P. R. Baril.

Traversy Ltd., 136 Papineau Avenue, Montreal, P. Q., are negotiating for the purchase of an old mill which they plan to convert into a sash and door factory.

The plant of the Dominion Shingle Company, at Bridgeport, N. S., was closed down for a few days for the purpose of making enlargements and alterations.

The Wellington Milling Company Ltd., are erecting a sawmill at Wellington, P. E. I. The building will be one storey, 65 x 30, cement block foundation, frame construction.

The Quebec and Ungava Railway Co., which is promoted by a group of English capitalists, is seeking power to build a line to Hudson's Bay and to exploit timber limits in the district.

The St. Maurice Lumber Company has been granted supplementary letters patent to carry on business in the province of Ontario. The head office of the company is in Quebec, P. Q., and capital stock of \$150,000.

The St. Maurice Paper Company, Cap de la Madeleine, P. Q., are contemplating making extensions to their paper mills at a cost of \$375,000. The manager is R. Louthood. The company also intend making extensions to their office building.

A despatch from Quebec City states that an American firm, with head offices at Baltimore, Md., has taken options on the old Cabot estate, including extensive timber limits, in Gaspé County, near Grand River, and intend de-

veloping it. A pulp and paper mill, employing five hundred hands, is one of the first improvements to be made on the property.

The Laurentide Co., Ltd., Grande Mere, P. Q., are contemplating the erection of an addition to their paper plant. Geo. Cahoon, Jr., is president of the company. They have also awarded a contract to D. Blanco to fill in and raise their lumber yard several feet.

The Nashwaak Pulp & Paper Company, St. John, N. B., with head office at 200 5th Avenue, New York City, are applying to the legislature for permission to erect a dam. This is to be used in connection with their pulp mill at Marysville, N. B. Mr. N. M. Jones is the general manager.

The Riverside Lumber Company, Cap de la Madeleine, P. Q., are contemplating a pulp mill. Mr. H. Biermans, who is manager of the Belgo-Canadian Pulp & Paper Company, Shawinigan Falls, P. Q., is interested in the new company and has gone to Belgium to arrange finances for the proposition.

A Federal charter has been granted to the Kipawa Company Ltd., with capital of \$20,000,000, and head office in Montreal. The company is empowered to carry on the business of lumbering in all its branches and to buy, sell and deal in lumber and timber, saw logs, ties, piles, poles, etc., and to manufacture lumber, pulpwood, paper and other products.

A Federal charter has been granted to Knox Bros., with capital stock of \$1,000,000 and headquarters at Montreal. The company is empowered to carry on business as timber merchants, sawmill proprietors and timber cruisers, and to manufacture, buy, sell and deal in timber and wood of all kinds and also to buy and deal in timber limits, growing timber, etc.

The two storey sash and door factory of the Lumber & Construction Co., Ltd., 115 Fourth Avenue, Ville St. Pierre, P. Q., has been destroyed by fire, the office, boiler room and two sheds escaping. Besides the factory, a large quantity of lumber, estimated to be valued at \$20,000, was burned. The total loss is between \$40,000 and \$50,000, covered by insurance. The company will rebuild and re-equip after a settlement has been made with the insurance company.

Western Canada

The Seabird Shingle Company, Chilliwack, B.C., have plans in progress for the erection of a sawmill.

The Gerrard Lumber Company Ltd., with a capital stock of \$50,000, has been incorporated with head office at Gerrard, B. C.

The B. & K. Shingle Company, New Westminster, B. C., are contemplating enlarging the Acorn Shingle mill, which will double the size of the present plant.

Work has been started by A. MacLeod, represented by J. F. Noble, 510 Hastings St. W., Vancouver, B.C., on the erection of a sawmill to cost \$60,000, at Point Grey, B.C.

The Export Mfg. Co., Ltd., New Westminster, B. C., have plans in progress for the erection of a modern box factory, at a cost of \$18,000, in which they will install the latest machinery. Work is expected to start early in the spring.

Under the will of the late James W. Hackett, lumber manufacturer, of Vancouver, an estate of approximately \$200,000 has been left. Mr. Hackett was a pioneer resident of Winnipeg, but went to the coast more than 25 years ago.

Capt. E. McCoskie has been advised by the deputy minister of marine and fisheries that his proposal to build in Prince Rupert, a small wooden vessel, to operate between Prince Rupert and nearby points has been favorably received.

F. C. Riley, superintendent of Bloedel, Stewart & Welch Co., timber operations at Myrtle Point, will open up a new unit this spring. Grading work on the railway extension was nearly completed at Christmas, but the laying of the steel will probably have to await the coming of spring.

J. A. Patterson, formerly in the wholesale lumber line in Vancouver, and more recently sales manager of the Brooks-Bidlake Cedar Co., Ltd., has organized the Provincial Lumber Co., with offices in the Pacific Building, Vancouver, and will again engage in business for himself.

The Victory Lumber Company, Ltd., has been incorporated with head office at Winnipeg, Man., and capital stock of \$40,000, to carry on business as retail and wholesale lumber dealers, manufacturers, also to operate and equip sawmills, planing mills, etc.

A change has been made in the logging firm of Lund, McNair & Darling, Vancouver, Mr. McNair giving place to Chas. Henderson Skinner. The new syndicate will be known as Peter Lund & Co. The senior partner is a pioneer lumberman of the province, having been connected with the Crow's Nest Pass Lumber Co., Ltd., Wardner, for many years.

Major George R. Hanbury has recently returned to Vancouver. It is claimed that the sawmill operated in France by Major Hanbury's forestry company (recruited in British Columbia) held the records for daily, weekly and monthly output in competition with the thousand odd mills that turned out lumber for army purposes. The record established for a 10-hour day was 156,000 feet, it is reported.

Motor trucks and trailers are now being used successfully by a number of B. C. logging concerns and mill companies. At Courtenay, Vancouver Island, J. Urquhart, mill owner, is using a five-ton Republic truck and Tupper & Steele trailer; Rolston Sawmills, Ltd., Cumberland, use a Garford truck; and Messrs. Douglas & Abernethy, of Burrard Sawmills, Ltd., Vancouver, employ two trucks in their woods operations. D. Kilpatrick, Courtenay, and Hec. Stewart, Duncan, are prospective purchasers.

The Alberta Lumber Co., Ltd., 790 Sixth Avenue, West Vancouver, has recently increased its mill capacity from 65,000 to between 90,000 and 100,000 feet per day. A complete extra equipment of double-cut band saw, carriage and transfers has been installed on the west side of the mill. December was an extremely good month. Sales Manager Stover reported to the Canada Lumberman. Besides a good local trade, thirty-six carloads had been shipped east, including a quantity of ship timbers to Ontario and Quebec.

The legislative committee of the Winnipeg city council is recommending to the latter body that power be sought by referendum of the ratepayers to erect a pulp and paper plant to cost three million dollars, as a means of establishing permanent industries in Winnipeg. It is also urged that the employees of the mill be made part owners and have an interest in the actual earnings. It is pointed out that there are unlimited stretches of timber areas in the northern part of Manitoba, which would afford abundance of pulp wood for the proposed plant.

Farmers Trust Bldg., SOUTH BEND, IND.

MR. LUMBER BUYER: You appreciate that texture is even more important than grade.

We produce one million feet per month of Ash, Elm, Hickory, Maple and Oak Lumber, most of which is produced from Indiana and Ohio timber, the texture of which is unexcelled.

In all cases we insist upon proper texture, knowing that if we can help our customers to build greater value into their product, it means more and better business for them and for us.

Many of the Canadian manufacturers know our business policy and are our staunch friends because of it.

We will Satisfy You. Give us a trial.

Sale of Pulpwood Lands in Northern Ontario

The Lake Superior Corporation and Algoma Eastern Railway Company are open to negotiate for the disposal of certain lands

Approximately 682,000 Acres

situated for the most part in that section of Northern Ontario known as the Clay Belt, and comprising the Townships of Storey, Langemarck, Dowsley, Nassau, Shetland, Staunton, Orkney, Magladery, Caithness, Rykert, Doherty, Whigham, Coppel, Newton, Dale, McOwen, Frater.

The lands in question are accessible to the Algoma Central, Trans-Continental, Canadian Northern, and Canadian Pacific Railways, and should be of particular interest to pulp and paper makers, also to settlers, in view of their agricultural possibilities.

General information will be furnished and plans exhibited at the office of Mr. Alex. Taylor, secretary of the Lake Superior Corporation, 1428 Bank of Hamilton Building, Toronto, or at the office of Mr. G. A. Montgomery, vice-president of the Algoma Eastern Railway Company, Sault Ste. Marie, Ont.

"Asbestol" Gloves and Mittens are Popular and Economical

Economical because of the unusual wear that is had from every pair, and popular with thousands of lumbermen because of their warmth and comfort. "ASBESTOL" Gloves and Mittens afford absolute hand protection to men in the lumber camps. They are durable and dependable and will outwear gloves and mittens of the ordinary kind. "ASBESTOL" Gloves and Mittens are built for service. They are of proven merit in quality, construction and value.

EISENDRATH GLOVE CO. 2001 Elston Ave.
CHICAGO, ILL.

Newsy Briefs from Eastern Provinces

A report from St. George, N.B., recently, was to the effect that lumber operations about Mill Lake have been seriously handicapped by the want of snow. It is said that the teams may be obliged to come out of the woods unless snow comes in the near future. It is estimated that 5,000,000 feet will be cut for the pulp mill there and 7,000,000 for other concerns operating on the river and the lake.

A fire broke out recently in the wood mill of the St. George pulp mill, but was extinguished before much damage was done.

A report from Hopewell Hill, N.B., is to the effect that the lumber operators are having excellent conditions in that section for carrying on their work this season. There is an abundance of snow in the woods and yet not too much to hinder operations. There will be a heavy lumber cut this year in this section of the country. The big operators will probably get their usual cut and there will be a large number of small cuts in many sections. With the cutting crews and the numerous mills busy, the woodlands throughout the country present a scene of great activity. A large number of men are engaged in the woods and good workmen are getting \$65 and \$70 a month in addition to their keep. When these men were boys the prevailing prices were from \$12 to \$20. The cooks get even better wages. Female cooks are employed to a great extent. A man who recently visited a number of these camps, speaking to a representative of the "Canada Lumberman," said that a large percentage of cooks at the camps he visited were women, largely wives of relatives of the lumbermen.

A new barkentine which recently arrived in port, called the T. H. MacDonald, has been chartered to load lumber for South America at \$65 per thousand feet. The three-masted schooner E. L. Comeau, which sailed from St. John on February 7, was given \$69 a thousand for a cargo to Buenos Ayres. These prices were unheard of before the war, and will in all probability never be equalled again.

Among the lumbermen who came to St. John to attend the Lumbermen's Convention was Albert C. Estabrooks, of Fredericton, who is quite prominent in the lumber industry of the province of New Brunswick.

Financing Big Sulphite Pulp Mill

It was stated recently in Montreal, that the American syndicate associated with the Royal Securities Corporation in the purchase of \$4,000,000 Riordon Pulp and Paper Company 6 per cent., 10-year general mortgage bonds had sold their entire participation privately within two days. The portion to be placed in Canada is now being underwritten.

With this new issue of \$4,000,000 of bonds the Riordon Company will have a total of \$6,000,000 of bonds issued, against fixed assets which are valued at \$15,000,000, and net liquid assets amounting to \$2,250,000. Net liquid assets alone are, therefore approximately 35 per cent. of the total bonds outstanding.

Funds arising from this new financing, together with a large investment by the Riordon Company itself are being devoted to the construction of a 30,000-ton bleached sulphite pulp mill on Lake Temiskaming, in Quebec Province, which mill is expected to be in operation by December, 1919.

Still No Decision in News Price Case

The paper control tribunal through Thos. P. Owens, registrar, has handed out an interim judgment in the matter of the appeals by the publishers and by the manufacturers from the order of Mr. Pringle fixing the price of newsprint. The interim judgment deals among other things with the question of the class of evidence still to be submitted and specifically mentions matters in regard to which no additional evidence is desired. The appeal board intimates that after further evidence has been received Commissioner Pringle will be asked to state what change, if any, should be made in the prices fixed by him.

Canadian Wooden Ships for Belgium

Canadian wooden shipbuilders are filling orders for twenty vessels for Belgian account, and it is not unlikely that additional contracts will be placed for steel vessels, according to Capt. Paul de Chippel, who is visiting Canada as the representative of Belgium firms who are the buyers. The wooden ships will be of 2,000 to 3,000 tons each, and they will be used for carrying foodstuffs from Canada to Belgium. The contracts were placed with British Columbia shipbuilders, and Capt. de Chippel is now at the Pacific Coast to make an inspection of the work already done. Imports needed by Belgium will consist principally of foodstuffs and raw materials, in the view of this visitor. The demand for finished products will be relatively small, as the manufacturing plants of that country will be placed on a producing basis with the greatest possible speed.

CANADIAN WOOD PULP

**We are the
LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

SPARTAN DID IT

This Graton & Knight Spartan 24" Double Belt was installed in July, 1912, on a generator drive in the plant of the Bosch Magneto Company, Springfield, Mass. The extremely short pulley centers caused some belting men to throw up their hands and say, "It can't be done." But this Spartan Belt—one of the Series—has been doing it successfully for more than six years.

This is due to the G & K Standardization Idea—the right belt for the work to be done.

Using Graton & Knight Standardized Series Leather Belts means full delivery of power for every dollar invested.—There's a belt for every purpose. Write for booklet on Standardization as applied to Belting.

Speed up Your Production and
Save Your Fuel with

GATES

Patent FIRE BOX LINING

PATENTS GRANTED

PATENTS PENDING

Our setting eliminates the losses through brick walls to a minimum, thereby producing higher temperature in furnace. This means more evaporation of water or in other words producing more steam without any additional cost of fuel or labor, and the simplicity and low cost of upkeep commends the GATES lining for economy.

GATES ARCH FOR DUTCH OVEN SETTING

That big weakness of joints in the furnace is obviated, and a block is furnished that has a margin of safety of at least 200° above the highest temperature you will get in your fire box.

Gates Patent Fire Box Lining is also designed to withstand abrasion, or the strong armed boy with the slice bar, because the Gates Blocks are properly burnt and only the best material used in them.

Our arch you will note is suspended. Any handy man can install same. What is more, you can replace any fused parts without disturbing the rest of the arch. This alone will cut a tremendous hole in your cost of upkeep.

Our engineering department is making a specialty of combustion and furnace work. Write us of any troubles you may have; we will be pleased to advise you.

Skidding and Loading Machinery To Suit Every Need

Do you want a Light Portable Outfit? Try our Ten Horse Power Gasoline Driven Machine.

We believe this is the handiest little outfit ever offered the Lumbermen for Skidding or Loading Logs.

We don't make the gasoline engine. Any standard engine can be used.

The whole outfit can be mounted on a wagon or sleigh if desired.

On a single line it will skid or load any log up to a ton and a quarter in weight.

Do you want a Large Powerful Outfit for skidding heavy logs or for pulling loaded trains?

We can supply you with such an outfit—an engine that will lift or pull ten tons or more on a single line, for skidding or loading purposes, and will operate four skidding lines at once, if desired.

We can also supply you with the right machine, at the right price, for moving a whole train of logs for loading car by car.

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit fraction of that power.

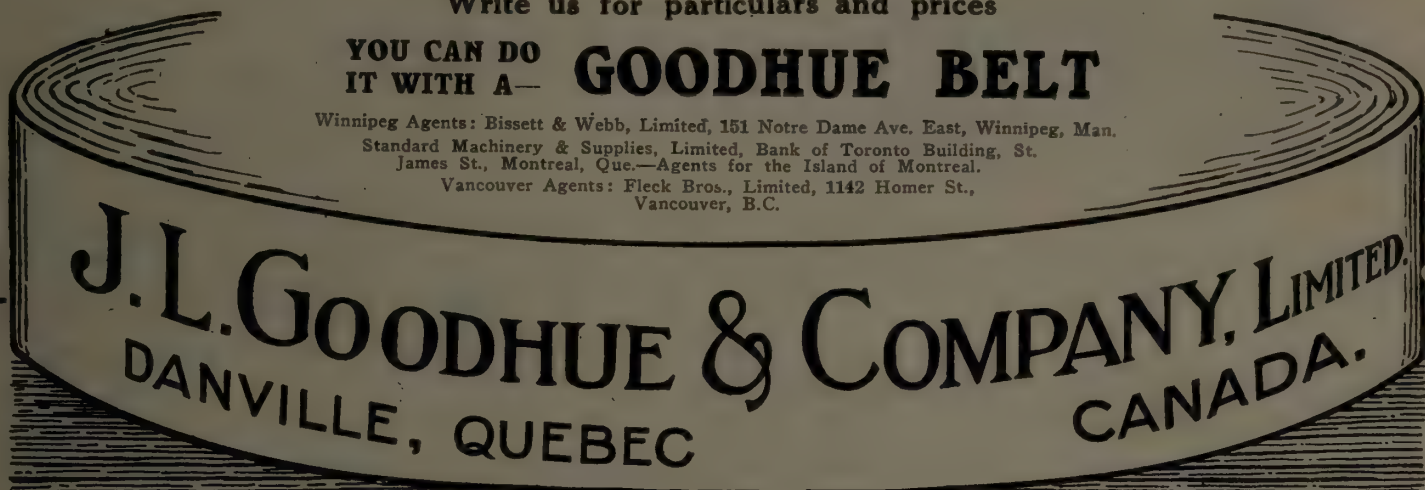

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated

Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.

Pulpwood, 246,282 cords.

Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

HON. G. HOWARD FERGUSON,
Minister of Lands, Forests and Mines.

Proctor
DRYERS

For Exacting Conditions

Your individual problems of veneer drying may be different or the conditions more exacting. Because it is seldom that two drying problems are the same our engineers make a special study of your particular conditions, considering the relation of the drying to preceding and following operations, quantity to be dried, number of men employed, heat available, cost of power, etc.

Proctor Veneer Dryers give a perfectly flat and pliable product without checks or splits

Hamilton, Ont., Canada,—W. J. Westaway, 5 Sun Life Building.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

—IN—

**Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.**

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

**Chapman Double Ball Bearing
Co., Ltd.**

**When You Put an
Aloxite Saw Gummer
on Your Machine—**

You have taken a big step towards saw gumming efficiency.

You will be working with a fast cutting wheel—a cool-cutting wheel—a wheel that holds its shape and will not burn the saw.

Made in vitrified and shellac bonds—straight, concave and covel shapes—all standard sizes and grits.

**The
Carborundum Company**
Niagara Falls, N. Y.

On Planers

Goodyear Extra Power Belting

The final test of belt efficiency is found on both large and small high speed planers in woodworking plants.

Planer drives are of two types, the cylinder drive and the side head drive.

Feed drives are hard to belt, as they are belted top and bottom—each belt must also run over another pulley, which allows the roller to turn and move the board ahead, as it is planed.

The side head drive is found the most difficult to belt, because of the maintenance of exceptional high speed, the difficulty of installation and the necessity of stretch elimination. Sidehead belts operate by two-quarter turns on the under side from a vertical shaft to a horizontal pulley. To make these turns, two idlers are necessary, running the belt over four pulleys—each sidebelt in contact with two pulleys.

It is with real satisfaction that we receive testimonials of the—exceptional service by Goodyear Extra Power Belting on work of this kind.

The Crow's Nest Lumber Company of Wardner, B.C. operate a Berlin-type side head matcher and resaw equipped with a 5 inch 5 ply Goodyear Extra Power—It has a record of eleven months continuous service.

Mr. Laird, Superintendent says "No trouble whatever has been experienced. Extra Power has been entirely satisfactory, giving a greater service than had ever been secured in the mill"

Mr. Laird adds that, while this particular record is outstanding, Extra Power has given splendid results through the mill on all types of machines, counter shafts and main drives.

Belt men trained by Goodyear are at the service of any industrial in Canada. Discussing your problems with Goodyear places you under no obligation. Phone, wire or write the nearest branch.

Adams Pointers

Made at Penetang, these powerful and efficient gasolene boats are giving satisfaction all over Canada.

Lumbermen will find it quicker and cheaper to work with an Adams Pointer. It is easier and safer to use than alligators and tugs.

The Adams Pointer has a well-built easy running engine, and powerful and reverse gear towing winch, and will prove equal to the heaviest work.

Get further particulars and blue prints, which give in detail the points wherein our Pointers excel.

The Machine That Made a Record In a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ¾ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

LINK-BELT

FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed," we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show two types of Link-Belt here. Our catalogue shows many others. Send for a copy.

The "108" in the Philippines

As installed in the plant of
Go Tamco, a Chinese
Manila, Philippine Islands

Wherever mouldings are to be made; especially where a machine is needed which is so sturdily built that it will run year in and year out with few or no repairs,

The No. 108 Open-Side Moulder

is the "Invariable Choice of the Man Who Knows." Besides its sturdiness and dependability, it has many labor saving features to commend it. All adjustments convenient for the operator. Knives ground and jointed on machine, set-ups quickly and easily made; these are but a few of the many things you will appreciate in the "108." Send for free illustrated circular.

P. B. Yates Machine Company Ltd.

HAMILTON, ONT. CANADA
U. S. PLANT: BELOIT, WISCONSIN

Speed and Reliability

Our No. 3 Lath Machine

has a remarkable capacity for output and stands up to the strain of continuous running at full pressure as few other lath machines can do. By its superior strength and great speed it is particularly valuable to mills doing a big volume of work. This fact is established by constant repeat orders from the larger mills. Floor space required, 4 feet by 4 feet 6 ins.; weight 1,600 pounds.

Shipped to you immediately from stock.

Send for catalogue and list of machinery available for shipment.
We make all kinds of equipment for the lumber industry.

The E. Long Manufacturing Company, Ltd.

Waterous Bandmills Are Best

No. 1 Guides

WATEROUS DOUBLE CUTTING UPPER GUIDE

The successful operation of any Band Mill depends primarily on the design and construction of the guides.

After several years of experience based on the observation of the behavior of the saw under all conditions, we came to the conclusion that the guides must not only be absolutely rigid, but must be made to swing about the **exact center** of the saw.

The upper guide is arranged for single and double cutting, is adjustable both vertically and horizontally, is fitted with quick opening device, and is water cooled and non-breakable. It swings about the **exact center** of the saw blade.

This latter feature successfully overcomes any tendency for the saw to cut into or out of the log, and allows the change in the direction of the saw blade on either edge of the saw to be easily and quickly made. In accomplishing this our upper guide has the further advantage that it does not drag the saw out of line, as in other forms, but simply twists it about the **center** of the blade. At the same time the exceptionally rigid construction of the guide proper, and the weight and strength of the supporting arm and the verticle slide, keep the saw always in a straight line and permit the mill to cut to capacity and to turn out perfect lumber without difficulty.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c. per lb.; West of Fort William, 68c., delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

FIRST IN QUALITY

American Model 5-77A Planer & Matcher

Everything is in this machine that is desirable in a high speed Planer & Matcher. The Automatic Belt Release and Tighteners; the **built-in** Cutter Head Knife Jointers for both top and bottom heads; a system of Feed Roll Gearing where there are no chains and sprockets or immediate gears; quick and accurate adjusting and positive locking Matcher Legs; micrometer adjustment of Feed Rolls and Platen, are features that put the model 5 ahead of all competitors.

American No. 34-C Inside Moulder

The general design and form of construction of the frame; the direct and simple system of Gearing; the massive Bed Plate supporting the Matcher Legs; the Side Clamping Boxes quickly removable for change of heads; the accurately fitted and easy adjustments throughout, are all features that make this, the most up-to-date inside moulder on the market to-day.

Our New Catalog

We expect our New Catalog off the press by the time this reaches you. Send your request for a copy to our representative in your territory.

Large stocks of Hemlock and Spruce always on hand.

Fassett Lumber Company, Limited FASSETT
QUEBEC

WE KNOW OUR LUMBER

We saw the trees, saw the logs being made, saw them being hauled and again on the drive. We have watched the logs being sawn at the mill. Saw the lumber graded over the trimmers, and again when it was piled in the yard, and we know we have nice knotted lumber, lumber that we like to sell, the kind we know you like to buy.

Whether its White Pine, Red Pine, Spruce or Jack Pine, Culls, Mill Run or Shop and better, we make the grade good.

Every board is inspected the second time when being shipped and pieces not up to grade are laid out.

EXPORT EDITION

of the "Canada Lumberman"

The Main Purposes of This Number:

First—To tell the importers in European and other foreign countries about Canada's timber resources and lumber manufacturing facilities, and the ability of our manufacturers to supply their needs.

Second—To acquaint our manufacturers and exporters with the requirements of foreign markets and assist them in developing the export business.

Some of the Articles that will appear in this important number:

1. Canada's export trade in past years, giving figures showing expansion and trend of trade, including articles by prominent lumber men on the advantages of developing our export trade, sizes of lumber produced in Canada and its suitability for foreign markets.
2. Location and description of timber resources, accompanied by illustrations, including samples of doors, interior trim, flooring, ready-made houses, etc.
3. A comprehensive article describing Canadian methods of logging, bringing logs to the mill, etc., accompanied by illustrated description of several big sawmilling and wood-working establishments, to graphically depict our facilities for manufacturing.
4. Explanation of lumber terms used in this country, with some reference to grading rules, etc.; also a complete explanation of European lumber terms and methods of handling lumber.
5. An article dealing with the transportation problems, shipping ports, facilities for handling our lumber, etc.
6. The probable quantity, kind and size of lumber required in the next five years for rebuilding the devastated area of Europe, comparing this with the normal consumption of the different countries.
7. Description and plans of the types of ready-made houses required for immediate use in Europe.
8. Special article on pit wood and pit props, sizes of wood used, how to prepare it, etc.
9. Special articles on pulp and pulp wood, illustrated with some of our largest mills.
10. Specially written articles on the B.C. lumber export trade; white pine in European markets; what factors have operated against the development of the export trade in the past, and other subjects which will comprise a complete review of the situation.

TWO THOUSAND COPIES DISTRIBUTED ABROAD

Canada's Enterprising Operators and Manufacturers will be represented in this International Number. Write for particulars

KANSAS CITY, MO., January 1, 1919

To Subscribers Lumbermen's Underwriting Alliance:

FOURTEENTH ANNUAL REPORT

It was with no little pride that we placed before you one year ago our fine showing for 1917, and it is with even more satisfaction that we are able now to submit our excellent financial statement and annual report for the year just closed.

Although in 1918 the menace from I. W. W. activities and alien enemies existed as in previous War years, still the losses from these causes were not so great as in 1917, but new adverse conditions appeared in 1918 in the form of a hurricane in the South, resulting in fires, and the Minnesota forest conflagrations.

In view of these exceptional conditions we are confident it will be a source of considerable gratification to our subscribers to know that we have closed our fiscal year with an average saving of 25.21% of the earned premiums.

During the past year we returned as savings dividends \$166,417.35; and, in addition, increased the surplus and re-insurance reserve \$229,291.09. New business written during the year 1918 exceeded the cancellations by \$13,527,069.08, making the total volume of insurance in force \$62,819,426.25. The ALLIANCE now carries insurance on 725 properties—an increase of 101 subscribers during the year.

A considerable reduction in the amount of insurance in force was necessitated on account of twenty-two of our plants finishing their timber cut. We were also reluctantly compelled to withdraw liability from a number of properties because of continued failure to comply with our reasonable requirements as to cleanliness and upkeep, and for other reasons which made the retention of the business undesirable from the standpoint of inter-insurance and sound underwriting.

While to be the largest in volume of any Inter-Insurance Exchange available to lumber manufacturers has not, at any time, been our primary ambition, we have, however, at all times, been actuated by a desire to make for permanency and soundness, believing that good underwriting methods and a good showing would attract that support which would place us at the head as a just recognition of our unrelaxing efforts and the quality of our work.

We feel a deep sense of gratitude to all of our policy carriers who have shown their appreciation of our efforts by placing the ALLIANCE at the top.

At the end of 1917 we found, to our surprise, that we had a greater volume of business on our books than any other Inter-Insurance Exchange confining its underwriting to lumber manufacturing plants, and this same position has been maintained throughout the year just closed.

We want to assure our supporters that in attaining this position we have in nowise relaxed our care in the selection of risks nor in our efforts to minimize fire losses. The same rules of eligibility have obtained with us from the start.

OUR READY RESOURCES

Cash in Banks	\$ 598,716.88
High-Grade Bonds and Accrued Interest	621,611.75
Accounts Receivable, Premium Deposits in Course of Collection, etc.	221,269.59

Total	\$1,441,598.22
Less Losses in Process of Adjustment	\$28,550.00
Due U. S. Epperson Underwriting Co., Attorney	43,415.01
	71,965.01

SURPLUS and RE-INSURANCE RESERVE \$1,369,633.21

This item consist of amounts to the credit of subscribers' accounts which remain after having disbursed to them in the fourteen years' existence of the ALLIANCE—

SAVINGS DIVIDENDS returned	\$1,134,387.10
FIRE LOSSES paid	\$4,058,087.40

The ALLIANCE force labored under extraordinary trying conditions during the past year. Eight of our experienced men joined the colors. Nevertheless efficient inspections were rendered our plants and our fire bulletins were continued. The service, supplemented by willing and prompt co-operation from our subscribers, who were also seriously handicapped through shortage of labor, was undoubtedly one of the principal factors in reducing the number and extent of fires and minimizing losses. We urge that mill owners and managers permit no laxity during the coming year, in the maintenance of good housekeeping, in the upkeep of protective systems or in the supervision of the watchmen. Conditions still demand that every available means be provided and used to prevent fire starting and to check its spread. We ask that the best use be made of our inspection reports and careful perusal and distribution to the foremen of our fire Bulletins.

With the return of so many of the soldiers to civilian life, labor conditions will ease up. This, coupled with the fact that there will be an enormous demand in domestic and foreign markets for timber products, leads us to predict that 1919 will prove a year of prosperity to the Lumbermen and we hope it may be one of small fire loss.

The usual annual savings dividends will be disbursed as soon as our records for the last year are all closed.

U. S. Epperson, President

U. S. Epperson Underwriting Company,
Attorney and Manager,
Lumbermen's Underwriting Alliance.

Why "Long-Bell" Lumber Is Trade-Marked

For a quarter of a century we have manufactured lumber that has maintained a reputation for uniform high quality. For an equal period a constantly increasing number of consumers have purchased our products and, in many cases, did not know who made them. Now all our lumber and timbers bear this trade-mark—

Long-Bell

THE MARK ON QUALITY LUMBER

Because of our capacity and ability for service, our modern equipment, our care in grading and efficient supervision of each process of manufacture, we believe it should be possible for retail lumber dealers to take advantage of the quality of our products. Therefore, all "Long-Bell" lumber and timbers are branded with the above trade-mark.

Our large national advertising campaign, referring the reader to the dealer, will make bigger, better business for dealers who sell "Long-Bell" brand lumber products.

Feeding the Camp

If that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 39

Toronto, March 1, 1919

No. 5

Canada and the Export Timber Trade

Patience is an admirable virtue, tolerance is at all times desirable, and candour is to be commended. In what proportion this trinity of qualities should be exercised at the present juncture with respect to the export timber trade of Canada it is rather difficult to speak. In manhood, youth typifies action and aggressiveness, and old age wisdom and conservatism. The East is often regarded by the breezy Westerner as worn and effete, tardy of action and hesitating in enterprise. On the other hand, the East not infrequently interprets Western movement as too unstable and illogical, partaking too much of the imaginative and not enough of the substantial.

In the time of any great crisis or in meeting an abnormal situation the safest course to pursue is perhaps the middle one. The errors of rashness on the one hand and fear on the other are thus minimized. Precipitancy has as many pitfalls as indifference and indecision. It has been charged by those who look on and believe they see both sides of the game that, in the matter of getting after the export timber trade and catering to the structural requirements of devastated Europe, the East is in a sort of trance, while the West is unduly insistent. How far do these observations apply in view of the unsettled conditions at present and can the present state of affairs be properly gauged?

Great bodies move slowly and lesser ones perhaps too fast. The West has sent an urgent message to the administration at Ottawa to the effect that unless export orders can be secured from abroad within the next few weeks and ocean tonnage arranged for there is danger of the Pacific Coast mills having to close down owing to stagnant business. The Federal Government is charged with lack of push and aggressiveness in securing foreign contracts for wood products. The Eastern lumbermen, on the other hand, have not been idling away time. In November last an important meeting of the Canadian Lumbermen's Association was held in Montreal and the questions of ocean space and ocean freight rates were given consideration and a memorial presented to the Dominion Government for the restoration of conditions in the export of lumber on the basis of pre-war conditions.

A cable was sent to London asking if the British Timber Controller would permit importation from Canada, and a reply was received enquiring what quantities could be supplied per annum for export to Europe, the amount that could be shipped, etc. To this a comprehensive communication was despatched furnishing an estimate of the stocks on hand, and the anticipated supply that the various provinces could furnish during the coming year. Early in January a cable came from the Premier of Canada to the Canadian Trade Commission in Ottawa, requesting certain information, and it was forwarded. Several questions were also cabled from the Capital regarding purchase, inspection, procedure of payment, shipping arrangements, if it was the intention to depart from pre-war grades, thicknesses and widths as known to the Canadian trade; if so what would be accepted, etc. It was pointed out that it was necessary to have all these details in order to advise enquirers intelligently. As it stands at present no further word has come to hand excepting that, until the British Government decide with reference to the continuance of the restrictions which have prevailed in the United Kingdom, answers to the enquiries cannot be made.

There the matter rests at present. Business is business whether in the period of reconstruction or in days of normal prosperity. Delay and uncertainty are fatal in any undertaking and the policy of watchful waiting will not gain much headway under existing circumstances unless there is definite and united move made by the federal authorities. The whole situation in regard to the export timber business may be summed up at the present time in the remark that no one seems to know "where Canada gets off at," or if anything tangible has been accomplished. Lumbermen cannot refrain from naturally enquiring what is the Federal Government and its various trade commissions doing? There are several members of the Federal Cabinet overseas and yet no orders for constructional materials have come through to Canada.

The paramount industrial issue today is one of export trade and it should be speedily and co-operatively solved. The Canadian lumbermen have done all in their power to further action and expedite negotiations and it would appear that the time had arrived when the Federal authorities and its trade bodies broke the long period of silence. They should either acknowledge that nothing has been achieved, or announce that a just proportion of the immense overseas business is coming in this direction or that some firm, effective step has been taken in regard to providing ocean transportation, reasonable freight rates and quantity orders for Canadian wood products.

Shippers Object to Giving Bonds for Freight

Manufacturers Strenuously Oppose New Order of Canadian Railway War Board— No Necessity for the Arbitrary Regulations

It would appear that the transportation companies are constantly making extra exactions in regard to freight rates, deliveries, switching arrangements, stop-off charges and other matters. In a recent issue of the "Canada Lumberman" it was pointed out that the railways proposed to double their tariff on the stop-off service and impose other obligations, an outline of which appeared in the February 1st edition of this paper.

A document was issued some time ago by the Canadian Railway Board, known as Circular No. 86, which was of a drastic and arbitrary character. Had it become operative in its original form, serious hardships would have been entailed upon shippers. This circular, known as No. 86, cancelled credit accommodations in connection with freight transportation charges by railways operating in Canada and placed them upon a strictly cash basis. The provisions were to have gone into effect on January 1st last, but owing to the strong opposition raised several of the original clauses were amended, and circular No. 97 was sent out early in February. This supercedes circular No. 86. The new order consents to the extending of credit in the matter of freight charges for a period not exceeding seven days, providing the consignor, or consignee, as the case may be, files a surety bond for the amount of the charges.

The exact wording of clauses 2 and 3, to which strong exception is taken, is as follows:

Tickets shall be sold only for cash in advance of service. Baggage charges are subject to the same rule as tickets, except C.O.D., baggage and storage charges, which must be paid in cash before delivery.

In cases where the enforcement of this rule with respect to freight will retard prompt movement or delivery of the freight or the prompt release of equipment or station facilities, carriers will be permitted to extend credit for a period of not exceeding seven days the prompt release of equipment or station facilities, carriers will be after delivery at destination if it be a collect consignment (see clause 6) provided the consignor, if it be a prepaid consignment, or the consignee, if it be collect, file a surety bond, either individual (not connected with the business for which credit is requested) or corporate surety company or bank guarantee, in an amount satisfactory to the treasurer or other properly designated officer of the carrier. The form of such bond shall be as per form attached, conditioned upon and providing for payment of all charges within seven days after forwarding or delivery of the freight. Upon receipt and acceptance of such bond, a carrier may accept and forward prepaid consignments or may deliver collect consignments in advance of payment of all charges thereon, to the amount covered by the bond. Failure to pay such charges within the time prescribed will automatically cancel such credit.

Clause 6: In computing the credit period the following will govern: (a) Prepaid shipment. Credit period shall be computed from time shipper is notified of amount due the carrier covering transportation of the shipment or shipments concerned.

(b) Collect consignment. Credit period shall be computed from time consignee is advised of charges due, or time goods are made available for delivery, whichever ever may be the later.

(c) In either instance where notice of charges due is mailed, shipper or consignee, as the case may be, shall be held to have been notified at 7 o'clock a.m. following date of mailing.

Manufacturers Urge Several Amendments

The joint committee of the Canadian Manufacturers' Association and the Toronto Board of Trade have sent the following memorandum regarding freight charges and the discontinuance of the credit arrangements to the Canadian Railway War Board in Montreal. The points raised speak for themselves as they are put clearly and convincingly.

Pursuant to the suggestion made at conference, held in Toronto on 20th December, 1918, that a joint committee of the Canadian Manufacturers' Association and the Toronto Board of Trade review the proposals contained in your Circular No. 86 of 20th November, regarding credit arrangements, and give you their views thereon, we beg to submit the following:

We find that Circular No. 97, of 3rd February, moderates to some extent the conditions of Circular No. 86, but it still contains

conditions and requirements which we consider unduly arbitrary, unfair and burdensome.

1. With regard to the introductory paragraph, providing that payment for railway services shall be on a cash basis, is it the intention to adopt similar regulations in connection therewith as are contained in United States Railroad Administration P.S. & A. Circular No. 9, to cover inbound and prepaid outbound shipments?

2. As to Section 1, providing that in all instances cash must be paid for tickets, and no tickets, and no credit allowance granted. At the present time, we understand, various charitable and religious organizations have arrangements whereby orders for transportation are given certain persons for presentation to the railways. The tickets are then issued to these parties and the cost charged to the organization. It is obvious that in many instances this plan is preferable and we cannot learn that the railways in any instance have lost money through this practice; in any event should not credit be extended such organizations in the same manner as credit for freight charges?

3. Section 2, it is true, extends the credit period to seven (7) days, and, in that respect, is a decided improvement on Circular No. 86, but it still contains the provision that "Failure to pay such charges within the time prescribed will automatically cancel such credit."

No Allowance Made for Contingencies

In our opinion this is extremely arbitrary as no allowance whatever is made for contingencies of any kind, as, for instance, where failure to pay within the time would result from negligence or failure beyond the control of shipper or consignees. This clause should be eliminated or amended within reasonable limits.

The surety feature of this section is also objectionable, inasmuch as it omits the acceptance of the guarantee of a responsible shipping or receiving concern as sufficient security. The written guarantee of a reputable firm should be ample protection to any carrier. In this connection we would draw attention to Supplement 3 of Circular No. 86, allowing acceptance of a guarantee from responsible concerns in lieu of any bond.

We observe that reference is made to "bank guarantee." We are informed that the Canadian Bankers' Association has definitely taken the position that they cannot undertake the giving of such guarantees.

4. Section 9. Instead of the words "is not apparent" in the second line of the third paragraph, we believe the words "cannot be substantiated by" should be substituted.

5. Section 10. The present practice permits the carrier to accept a written statement from a responsible firm that they will indemnify the railway against loss on account of delivering property without surrender of order bill-of-lading. We submit that this should be all that is necessary from any reputable firm.

Some Snags in the Pathway

In regard to this feature we would point out that import traffic from certain countries moves via other routes than the documents. In other words, the bill-of-lading is negotiated through London and frequently does not arrive for some thirty or sixty days after the arrival of the shipment. Certainly reputable concerns should not be penalized for this condition which cannot be prevented.

6. Section 11. Our members strongly object to this section as unjust in its treatment of any reputable or financially responsible concern, and should be eliminated. Not even the U.S.R.A. imposes any such unfair treatment on its patrons.

7. Section 12. This section implies that the necessary surety shall also be required in connection with freight handled by authorized railway cartage agents. We are informed by the representatives of the railway cartage companies that they will continue their present methods of granting credit. The circular is in conflict with the intent of these companies. Unfortunately, however, many shippers and receivers are preparing to furnish bonds for this service. We think that before issuing such instructions a definite un-

derstanding should have been arrived at with the cartage companies without which this section should not have been incorporated.

8. In conclusion, we consider that the extension of credit by a carrier to a shipper or consignee for payment of transportation charges, or for any other purpose, is a matter that should properly be conducted by and between the parties directly interested and not by any rigid code of rules arbitrarily imposed and more arbitrarily carried out.

Inflexible Set of Rules Won't Work

We submit that credit cannot be conducted on any inflexible set of regulations without working a hardship on the party to whom accommodation is extended and without incurring confusion, friction and annoyance between the parties interested, and we assume this is not the desire of the Canadian railways.

The handling of credits by hard and fast rules in the United

States has resulted in endless confusion and controversy between carriers and the shipping public. You may be familiar with the working of the United States arrangements from the carriers' viewpoint but we can assure you that from the standpoint of the public the arrangement is far from being satisfactory, and we submit that any credit system, to be satisfactory, must be fair and acceptable to both parties.

While the committee is quite willing to co-operate with the carriers in establishing reasonable rules for the handling of credits, it cannot subscribe to clauses 2, 9, 10 and 11, as shown in Circular No. 97. for the reasons herein outlined.

We again affirm that the question of granting credit is one for action as between the individual carrier and its customer, and, failing to see the necessity for the promulgation of this circular with its objectionable features, we would earnestly urge, on behalf of our members, that it be withdrawn or postponed pending a further discussion of the points at issue.

Retail Lumber Merchants Are Up and Doing ***Encouraging Reports Show Progress All Along the Line—Important Matters on Which Prompt Aggressive Action is Taken***

The report of the Committee on Legislation and Transportation, of which E. M. Barrett of Ottawa, is chairman, presented at the annual convention of the Ontario Retail Lumber Dealers' Association, held in Toronto on Tuesday, February 11th, showed that much effective work was carried out during the past year.

The first matter touched upon was the Mechanics' Lien Act, and in regard to legislation on this important measure and the urgent need of radical amendments to the present act, the report said:

We had hoped that the committee appointed would have been able to decide upon some definite line of action, but it appears to be doubtful whether anything can be done in this respect by the committee, in fact by any single association. Recommendations have been made by some members that we should endeavor to have the whole act redrafted while others are of the opinion that it would be advisable to ask the Legislature to pass certain amendments. On the other hand there are many of our members who feel that the whole problem is too large an undertaking for us, and that the only manner in which it can be handled is through some good legal firm, who can devote considerable time to drafting a new act covering the amendments we desire, and submit it to Parliament without our identity being known. This would cost a considerable sum of money. We feel, therefore, that the question should be made the subject of discussion by the general Association so that they may give their committee detailed instructions as to their desire, if any steps are to be taken in the direction of amending the act or drawing up a new one. We understand that an appointment has been made with the Premier and the Attorney-General of Ontario for a deputation from our Association to call upon them in order to lay before them our desires in connection with the Mechanics' Lien Act and the Business Assessment Act. This has been done in order that, if it is the desire of the Association to adopt a definite line of action, no time may be lost in making our representations to the Government, so that they may come up for consideration at the present session of the Legislature.

The Ontario Assessment Act

The Ontario Assessment Act has come in for much adverse criticism on the part of our members and it has been proposed that we should send a deputation to the Government to lay before them the undue burden which the act places upon retail lumber dealers as compared with other merchants. Arrangements have been made for a deputation for this purpose. We suggest that the president appoint a committee in connection with this matter and in connection with the Mechanics' Lien Act, if it is the desire of the Association to interview the Government on this question also, such committee to prepare the facts and arguments which we wish to present. This matter should be attended to at once, so that both matters may be presented in the most forcible manner possible.

The Jacobs Bankruptcy Act

We consider that this legislation should come under the observation of our Legislative Representative, so that he may see that our interests are protected as far as possible when it comes before Parliament for adoption. In the meantime your committee will endeavor to obtain further information for him.

The Workmen's Compensation Act and Its Audit

We believe that there should be a reclassification of the rates covering the lumber business, with a view to separating the factory and mill yards and teamsters' departments, and a new schedule of rates drawn up reducing the assessments in proportion to the different risks, as compared with other industries and trades, and that the system of capitalization deferred should be discontinued.

We feel that the books of the Workmen's Compensation Board should be subject to audit, and that a yearly statement should be issued for the information and benefit of all contributors under the Act. We feel that there is an injustice in the application of the Act in regard to the medical attendance given to the injured, inasmuch as the Act leaves it open for the medical attendant to prolong unnecessarily the period of disability of the beneficiary. In order to overcome this we would suggest that each contributor, or group of contributors, be permitted to retain in his or their interests, a physician, surgeon, or officer who would have authority to examine the injured, while under the benefits of the Act; the expenses of this physician surgeon or officer to be paid by the Board. Failure by the injured to permit such examination would invalidate any claim he might have for benefits arising out of the Act.

The Factory Act Requirements.

In view of the fact that it is necessary to report all accidents under the Workmen's Compensation Act, steps should be taken to make it unnecessary to report these accidents a second time as required under the Factory Act. We see no reason why this duplication in reporting should not be abolished and the Compensation Board be requested to furnish this information to the Department handling the Factory Act as required.

The Government Housing Scheme.

From information which we have before us, we are of the opinion that the Act does not provide sufficient funds to make it practicable under present conditions. We would recommend that our secretary be instructed to obtain complete information concerning the application of the Act so that our members may be in a position to discuss it intelligently, particularly from the point of view of the practical building supply man.

In regard to the Bell Telephone Company's rate increase, arguments should be prepared opposing this application strenuously.

Early Closing of Freight Sheds

We consider that the secretary of the association should have taken this question up with the different members of the association, and if it was found that it was not in the best interests of the trade to close the freight sheds at five o'clock the companies should have been so advised. So far as the members of the Eastern Division of our Association are concerned, they object to the closing of freight sheds before six o'clock.

Discontinuance of Credits by Railroads

We do not think that the proposed change will work out to the general satisfaction either of the railroads, the shipper or the general public. In fact, it appears to be impracticable and likely to work

considerable inconvenience, especially to the lumber trade. It will hamper the release of cars because shippers and receivers of freight must necessarily check all rates before they are paid over the counter. Furthermore, railroads having been looked upon more or less as public utilities should not expect to transact general business without some indulgence being granted, at least, to well established business concerns, and in view of the many complexities in the railroad business, we feel that any change along the lines suggested by them will necessarily result in a complete revolution in our transportation departments.

We, therefore, request that a strong representation of our Association wait upon the companies, and, if necessary, also upon the Board of Railway Commissioners and request that lumber firms be not included in this proposed change of policy.

Use and Abuse of Private Sidings

There are many reasons why we should discuss this matter, as there are, no doubt, many cases where cars have been placed on private sidings, of which the consignee has received no advance notice. Consequently there is often delay in taking delivery, but the per diem charges commence from the time the car is placed, regardless of proper notice having been neglected. Cars are not always properly "spotted" for unloading, etc.

The matter of repairs to private sidings should receive our attention with a view to having the companies assume this obligation. Instances are known in which the companies, during periods of congestion, use private sidings for the storage of cars, for which we

believe the owners should receive some consideration when demurrage charges are levied.

Increased Railroad Rates War Measure Act

In connection with this matter we were given to understand that the increases in rates were granted only as a War Measure Act. This being the case, our secretary should at once communicate with the chairman of the Board of Railway Commissioners and request information as to when these increases are to be taken off, now that the war is over. This also applies to the increased demurrage rates which were imposed as a War Measure Act.

The Per Diem Charges on Cars

This is an ever perplexing problem, and it is difficult for the consignee to believe that it is, as a rule, justly applied. There are many reasons for complaint. As an instance, cars are sometimes delayed in transit perhaps five or ten days, causing considerable financial loss to the consignee, and there is nothing which provides for the censuring of the company for delays to cars at terminal points, but it would appear that the moment the car reaches its destination the consignee is charged with the duty of releasing the car promptly, in order to make up for the time lost through the company's handling, or is under the penalty of the per-diem charge. We are of the opinion that there should be some ruling whereby a car delayed in transit should be exempt from the per-diem charge to the same extent as this delay. This question should be taken up with the Board of Railway Commissioners with a view to effecting quicker despatch en route, or penalizing the company for such delay.

THE ACTIVITIES OF THE INSURANCE COMMITTEE

A most complete and instructive report was presented by the Insurance Committee, of which Walter C. Laidlaw, of Toronto, is the chairman. The report follows:

Your Insurance Committee has to do with two classes of insurance—(1) Fire Insurance, (2) Workmen's Compensation Insurance.

There is one urgent recommendation which your committee submits to the members and which applies equally to both classes of insurance. Reference was made to this in the report submitted to the September meeting. The point is briefly expressed in the two words "Safety First."

Our annual waste in Canada, both in fire loss and in accident loss, is higher than the loss ratios of European countries. Our fire loss per capita is nearly five times what it was in Europe, and our average insurance rate is nearly five times what it was in Europe, and our average insurance rate is nearly five times the European rate. It is evident on the face of it that in this new country of ours we have not yet adopted those safeguards to property and life which the older civilizations have acquired. In the United States an extensive educational campaign is being carried on in these lines. In Canada propaganda work on the same lines has recently been taken up by the authorities and deserves the support of each individual citizen.

When we consider that the premiums we pay are really a tax to cover losses, it is plain that if we can reduce losses by accident and by fire we will be able to reduce our premiums. It is therefore to the direct profit of each one of us that everything possible be done that will minimize the loss of this character. The first step is for each of us to realize for himself the serious nature of the loss and the fact that a large part of it is preventable. The next step is for each of us to impress on our neighbors and those in our employ the situation as it exists in Canada and to keep continually hammering at it until we Canadians are educated to a higher standard of accident prevention and fire protection. We can set an example in this by installing safety first devices, installing fire protection apparatus, posting notices calling attention to dangerous practices and by keeping our premises clean and tidy and by eliminating exposures which may lead to accident or fire.

This is a subject of vital importance to us, not only as lumbermen, but as Canadian citizens.

Fire Insurance Matters Reviewed

The report of the "Ontario Insurance Commission" has not yet been issued. Hon. Justice C. A. Masten as commissioner sat for over a year hearing evidence, and his report should be of interest. There have been no developments during the past few months in rates. Our fire loss has continued heavy and our rates have remained as they were. Between 70 and 80 per cent. of Canada's annual fire loss is due to fires in manufacturing plants and business establishments.

During the first ten months of 1918 the property destroyed by fire was 45 degrees greater than during the same period of 1917,

and 70 per cent. greater than in 1914. During these ten months there were 16,000 fires with an aggregate loss of \$28,000,000, whereas the losses for the whole twelve months of 1917 were \$28,000,000. In addition to this direct loss, by fire, the country suffers a heavy indirect loss whenever a fire occurs, so that the actual loss to the country is very much greater than the figures indicate.

Workmen's Compensation Insurance

The Ontario Workmen's Compensation Board report that the accident record of the lumber group during the last two years has been bad and has been getting worse instead of better. As a consequence, the rates we have to pay have continued to advance. A very large proportion of these accidents are due to carelessness and negligence, and could have been prevented.

Retail lumber yards and planing mills come under Class 4 and our rates have been increasing as follows:

The Assessments of the Board

Year	Assessed rate lumber yard and planing mill	Adjusted rate lumber yard and planing mill	Assessed rate factory	Adjusted rate factory
1915	1.50	1.50	1.50	1.50
1916	1.30	1.80	1.50	1.80
1917	1.80	1.80	1.80	1.80
1918	2.00		2.00	

The Workmen's Compensation Board has made a special rate of \$1.40 for lumber yards without planing mills on 1918 pay roll effective only on application by the employer. We call this to the attention of our members who are entitled to the benefit of this special rate.

All yards which have a planing mill attached pay the \$2.00 rate. This is obviously unfair to the retail lumber yard, which has only a small planing mill. It means that the employer in this case must pay the same rate as the planing mill or woodworking establishment which may have no lumber yard to speak of and where the risk is very much greater. We have applied to the Chairman of the Board for a ruling on this matter and he has reaffirmed the above decision. It is proposed that a deputation should wait on Chairman Price and urge him to reconsider the matter.

Your interest and co-operation is asked in connection with the Woodworkers' Accident Prevention Association of which you are a member. The expenses of the Association are paid out of your premiums to the Workmen's Compensation Board. The Association has a secretary and a staff of inspectors for examining the physical hazard of the various plants in our group and recommending safety devices where they seem advisable. This is your own association and these inspectors are under your own control. It is a co-operative movement among ourselves to endeavor to improve the standard of our plants and to eliminate the risk of accidents as much as possible. This appeals to all of us both from a humanitarian point of view and from the point of view of dollars and cents. If any of

our woodworking group is careless and causing loss of life or accident by his neglect, it is the desire of each one of us that the inspector should follow him up closely and insist on him furnishing the protection necessary to his workmen.

Co-operation in the Safety Movement

The "Safety First" campaign, however, does not stop with the furnishing of guards of safety devices. In fact, that is only the beginning of it. It depends almost entirely on the co-operation of our foreman and of our workman in using care for their own sakes as well as for ours. This can only be accomplished by a continual campaign of education among them. Your committee urges each member of this Association to take steps to actively enlist the interest of his men on these lines. It is suggested that a meeting of the workmen should be called and the matter of "Safety First" discussed with them and by them. In large plants the men have elected their own committees, who make this phase of the work their special care and make recommendations which will eliminate the risk of accident and also deal with the careless man who may cause injury to himself or to his fellow employee. The inspector of the Woodworkers' Accident Prevention Association would be glad to co-operate and assist in this work.

Your Executive Committee, at their meeting on March 26th, 1918, passed the following resolution:

That the Ontario Retail Lumber Association urge the Ontario Workmen's Compensation Board to adopt the following principles:

(1) That all assessments should be based on the so-called Current Cost plan; that is to say, deferred claims shall not be capitalized.

(2) That all doctors, nurses, etc., should be under the jurisdiction of the employer instead of under the Board, provided that such medical care and hospital accommodation is adequate and satisfactory to the Board.

We are pleased to state that the Board in 1918 adopted the Merit Rating system, whereby the employer who has a number of accidents pays a higher rate and the employer who has few or no accidents, gets a rebate.

A number of our members have complained of cases where injured employees received more compensation than they were fairly entitled to. The doctors' bills, in some cases, are excessive. Perhaps the family doctor is using the Board to work out his bills and connives with the man in laying up longer than necessary. Each specific case should be reported with full details to the Board.

The Amendments That are Proposed

As the Act stands, we have very little say in its operation and are given only such information as the Board sees fit to give. It is proposed to take steps to secure amendments to the Workmen's Compensation Act covering some of the points that are unsatisfactory.

(1) That the employer should have control over the doctor handling injured employees so as to prevent collusion and malingering.

(2) That information should be furnished showing the plants that are responsible for the accidents that occur and the amounts paid out for accidents in each plant as compared to the amount of assessment paid in.

(3) Recognition of the rights of each Safety Association to represent its group before the Board on matters of common interest.

(4) Provision for having the accounts of the different groups audited by auditors appointed by ourselves, and securing detailed statements of the money received and paid out.

(5) Provision for an adequate Appeal Tribunal on questions of law arising in connection with the Act.

THE SECRETARY OUTLINES THE WORK OF THE YEAR

H. Boulton, secretary-treasurer of the Ontario Retail Lumber Dealers' Association, in the course of his summing up of the first year's operations, said:

Looking back over the twelve months which have elapsed since this Association made its appearance, there has been so much to do and the work has been so interesting that it seems almost like yesterday that a number of those who are with us here to-day held a meeting for the purpose of mapping out the work of launching this Association. While there was no lack of enthusiasm on the part of those who attended that meeting, their numbers were small and they all realized that they had tackled a very large job. The present healthy state of the association's affairs is due to their hard work and enthusiasm. Nothing else could have put us where we are to-day. If we can count upon enthusiasm of the same kind on the part of all who have come to this meeting, there is no foretelling the extent of the progress we will have made by the time we hold another meeting. This brings to mind a remark made a few days ago by a prominent Toronto lumber man when he heard that the Ontario Retail Lumber Dealers' Association had arranged to hold its annual meeting at the King Edward Hotel. A few months ago, he said, they had been content to hold their meeting in the Assembly Room of the Board of Trade, but the benefits of co-operation had been so great that now they were content with nothing short of the best that Toronto could offer. There is something more than a jest in this. There is nothing too good for the Retail Lumber Dealers of Ontario if they will work together for the good of the trade and live up to the high ideals upon which every successful trade association must be founded. Co-operation among retailers will inevitably lead to co-operation between retailers and wholesalers. The ideals for which we are working are the same as those for which the wholesalers are working in their association, and there is not a single item of progress that can be made by either association without reflecting to the advantage of the other. Therefore, it is important that as an association of retail lumbermen we should not limit our vision by the boundaries of the retail trade alone, but should consider every problem with which we have to deal, from the point of view of its influence upon the whole trade as well as its particular influence upon the Association or upon the individual. These thoughts are prompted by events which have taken place in connection with lumber trade association work in Ontario since September last, and which contain promise of far-reaching results at an early date. Reference to these will be made later in this report.

Generally speaking, the work of our association, since September last has been following along lines similar to those which were reported at the September meeting. For the benefit of those who

were not present at that meeting it may be said that one of the interesting lines of work we have been carrying on is that of dealing with complaints made by members of the association in regard to the failure of some wholesalers or manufacturers to carry out their contracts for the shipment of stock. Some of these contracts, when placed in our hands were as much as two years old, yet in practically every case the representations made by our association have resulted in the stock being shipped, or the wholesaler or manufacturer sending a cheque to the retailer in settlement of the loss which the retailer could be justly considered to have suffered.

It is important in connection with these matters that members should make use of the services of the Association for securing shipments to which they are justly entitled, and it is equally important that they should refrain from urging claims of this nature without satisfying themselves that they are entitled to press them. It will do the Association grave injury if it exerts its powerful influence for bringing pressure upon the wholesaler or manufacturer, for the performance of a contract in connection with which the retailer has not a reasonable claim. Mention of this is not made as the result of any such claims having been made, but as a result of representations that have been made to us occasionally by some wholesalers who are of a suspicious turn of mind and who suggest that there are retailers who would not be above using their association for such purposes. For the sake of the good name of our association, as well as its success, we must build up a reputation for square dealing which cannot be questioned, at the same time showing to the world that we intend to insist upon receiving just as good treatment as we give. This is the ground work of success for our association which must be maintained at all costs.

The Obligation in Carrying Out Contracts

Growing out of this there is the reverse side of the picture, representing our duty in connection with contracts which we have entered into for the purchase of stock. It has been reported to us by several wholesalers that some retail dealers in the past have been too much given to the practice of cancelling orders on a falling market. If we expect the wholesalers and manufacturers to live up to their contracts, it is up to us to do likewise, for we cannot blow both hot and cold at the same time. It is important that we should think of these things at present, for our association is in its formative stage and what we do to-day will determine the nature of much that we do in the future. At our September meeting we passed a resolution upon this subject. Possibly, if you look into it closely, however, you will feel that this resolution might have been made stronger. It recited the importance to the retailer of living up to

his contracts, and concluded by urging members to buy their stocks from wholesalers and manufacturers who showed a spirit of co-operation with our association in its efforts for square dealing between ourselves, manufacturers, wholesalers and customers. Does this go far enough? Should we not, after expressing our convictions on this matter, show the courage of these convictions and pass a resolution definitely pledging ourselves to live up to our contracts, and to ask for the resignation of any members who fail to do so? This has been done by one of the strongest Retail Lumber Dealers' Associations in the United States and has greatly strengthened their prestige.

The Question of Trade Ethics

This leads to the consideration of another matter which has been referred to in the president's address, namely, the question of trade ethics as relating to the proper field of trade for the wholesaler and the retailer. Early in 1918 one of our members wrote to the Wholesale Lumber Dealers' Association, reporting the sale by a wholesaler of a large quantity of material to an industrial corporation for the erection of its plant. The retailer felt that the sale should have been made by a retailer and asked the wholesalers to consider the subject and endeavor to lay down a principle for the guidance of wholesalers in future when considering enquiries of a similar type. Unfortunately this letter reached the wholesale association just as it was about to adjourn its regular monthly meetings for the summer months. At a meeting in the fall, however, the subject came up again and in the meantime other cases of a similar nature had developed. The directors of the Wholesale Association laid the matter before the general association at its December meeting and a resolution was passed referring it to the Committee on Trade Relations, with instructions to consider the matter and be prepared to meet with a similar committee to be appointed by the Ontario Retail Lumber Dealers' Association, to discuss the subject and endeavor to reach a mutually satisfactory conclusion. This is a most important matter and one which our association should consider thoroughly: The appointment of such a committee would have to be made during the present meeting and the members appointed should be fully advised of the views of this association, so that they may present them effectively at the joint meetings.

The Adoption of Standard Plans

At our general meeting, on September 3rd, last, the following resolution on this subject was carried:

That this Association recommend the appointment of a committee to consider the advisability of getting out a set of plans, in book form, showing standard barns, outbuildings and garages, the same to be furnished to our members at cost.

This resolution was referred to the president and the secretary, with instructions to appoint a plan book committee. This matter was submitted to the president, and, on his instructions, the secretary wrote to the secretaries of the local districts, asking them at as early a date as possible to appoint local plan book committees and to take this matter up. The suggestion was made also that these committees should make such recommendations as they considered useful and be prepared to attend a general meeting of the plan book committees from the various districts, or to send a representative to such a meeting to be called at a later date. While some progress has been made in connection with this matter it has not been advanced to the stage of holding a general plan book committee meeting. The Eastern district, with its usual enthusiasm and thoroughness took the matter up at once and has forwarded to the secretary a comprehensive set of plans as required by the resolution. The other districts have not responded, although our youngest branch association, which was formed at Orangeville, on December 4th, took the matter in its own hands at the organization meeting and has already secured a barn plan service, regarding which Mr. J. B. MacKenzie of Georgetown will be able to give you information. The importance of this matter is sufficient to justify the appointment of a standing plan book committee with instructions to send representatives to a general meeting and carry out the publication of the book. If this committee considered it advisable it is more than probable that the publication of the book could be done without cost to the association and possibly be made a source of revenue, by providing for its carrying advertising matter.

Uniform Standard Sizes of Millwork

At the September meeting a resolution was passed referring to the desirability of uniform standard sizes of millwork and recommending the local associations to consider the matter with a view to the possibility of evolving a schedule for the whole province. The Toronto dealers are the only ones who have taken this matter up and carried it through to the point of adopting a schedule. Their standards have been published and copies were sent to each of the

local secretaries with a request that they be laid before the local associations and a report made to the general association. The local associations have not as yet submitted any reports. A discussion of the Toronto standards, at this meeting, might open the way to the adoption of a schedule for the Province.

Survey of Retail Lumber Yard Costs

One of the matters which your secretary had to deal with last year was the survey of retail lumber yard costs. A schedule was prepared showing the various headings under which these costs should be figured with a request to fill in the amounts and return it to the Secretary who was to prepare an analysis of the results and submit it to the association in such a form as to furnish the essential comparative information but not to disclose the names of the firms reporting. It is to be regretted that in spite of several repeated requests for this information the replies were not in sufficient number to permit a really valuable analysis. That this is one of the matters in connection with which our association ought to be able to devise a means of serving its members is beyond question. To illustrate this, it need only be mentioned that the forty reports received showed that the cost of doing business was variously estimated by the members reporting at from 18 to 45.18 per cent. of the total sales. If we are to make any progress in connection with this subject it will be necessary for the association to discuss it fully and adopt a more workable plan. It may be that in the cost survey which has been adopted by the National Retail Dealers Association of the United States, you will find something adaptable to your own conditions which can be used by our association and enable us to reach the results we are aiming at more readily.

There remain two subjects for consideration in this report, membership and finance. In both respects we have done well, but in both respects also we can undoubtedly do far better still. It should not be difficult for us during the present year to add a hundred or more members to the list. There are about 329 good prospects for membership whom we did not secure in 1918 and our association has a good record of accomplishments which will make it easier to interest new members than it was a year ago when the dealers had to take our promises on faith. No member of the association should feel satisfied with what he has done for it until he has reached the limit of his possibilities in connection with securing new members. It is in your own interest particularly that you should enlist as members all those who are engaged in the retail lumber business in your district and as far out into the surrounding country as possible.

The Financial Showing is Satisfactory

In the matter of finance, the events of the year 1918 are encouraging. We started the year in the dark, feeling however, that the importance of the work we hoped to do, justified confidence. Our financial report to-day shows that we finished the year with a small amount of money in the bank after paying our running expenses for 1918 and liquidating accounts for correspondence and other work carried out during 1917 before the Association was definitely organized. Moreover, we were under a heavy expense in 1918 for furnishing the Lumbermen's Training Course to members who paid a membership fee of \$15 or more. This is a record of which the members may feel proud. In this connection an opportunity should be taken to express the gratitude we feel to the wholesale lumber dealers who assisted us so materially and unselfishly in securing members during 1918. One direct result of this interest on the part of the wholesalers is the addition of some thirty-five or more members to the roll, and another is the organization of a progressive local branch of the association at Orangeville in December last. It is to be hoped that during 1919 a number of similar local branches will be organized as the value of the association to the individual members can be greatly increased in this way.

With the exception of the detailed financial statement, which will be presented separately, this concludes the report of your secretary-treasurer. May I add a personal word or two before resuming my seat. I wish to leave with you some idea of the inspiration it has been to me to work for the men who compose the Ontario Retail Lumber Dealers Association. Their enthusiasm for the association, their keen appreciation of its value and the generous spirit of co-operation which they have extended to me at all times, have made my work far more of a pleasure than a task. My good fortune in having fallen into the hands of such a body of men as composed the association is a daily source of inspiration to me and I have become convinced that there is something about the retail lumber business which brings out the best there is in a man, making it a pleasure to associate with him and, above all, making him naturally a successful association member.

The report of the Membership Committee was presented by the chairman, John B. Reid, of Toronto, and was of an encouraging character.

Lumber Dealers Want Act Altered

Contend That Lumber Yards Should Not Be Assessed on the Same Basis As Planing Mills

The directors of the Ontario Retail Lumber Dealers' Association, together with a number of dealers from various points in the province who attended the annual meeting of the Association, and a large representation from the retail lumbermen of Toronto, waited upon Chairman S. Price, of the Workmen's Compensation Board on February 10 at the office of the Board in the Normal School Building, Toronto, in order to present a number of matters relating to the Act, regarding which they desired explanations, or to have changes made.

Walter C. Laidlaw, of the R. Laidlaw Lumber Company, Toronto, presented most of the points brought up on behalf of the deputation. The most important was that in regard to the assessment of lumber yards in connection with which a planing mill is operated. No matter how large or small the planing mill may be, any yard with such connection is assessed on the same basis as a planing mill, which bears an extra heavy burden. It frequently happens that a small lumber yard with one or two machines operated near by, although in reality a lumber yard and entitled to assessment as such, must pay the higher assessment of a planing mill, even though the men employed in the yard do not enter the planing mill.

Chairman Price admitted that there was an evident injustice in this, but he could not find any practical manner in which the two could be segregated. If the retail lumber dealers would suggest to him some practical method of segregation, the Board would be pleased to consider the matter.

Several dealers present suggested that the payroll would furnish a practical means of segregation, but Mr. Price did not seem to agree with them. The discussion on this point went no further, neither the Board nor the dealers being apparently able to satisfy the other party.

Control and Selection of Doctors

Mr. Laidlaw also brought up the matter of control of doctors, intimating that cases were known in which doctors encouraged injured employees in malingering.

Chairman Price replied that the Board was keenly anxious to learn of any such cases and if the facts showed that the doctor was acting in this matter, the Board would see to it that he never again would be permitted to attend any employees who would be claiming compensation from the Board. Mr. Price also reported that the Board was anxious to have the employers control the selection of the doctor as far as possible. In order to promote this end, the Board had prepared printed memorandum slips to furnish to employers. Whenever an accident occurred employers could fill out one of these slips addressed to a particular doctor of their own selection and hand it to the injured employee for presentation to the physician.

An interesting round table discussion followed, between the various dealers present and Chairman Price and some of his staff. In the course of the discussion Mr. Price submitted files from his office giving particulars in regard to last year's accidents in group 4, to which lumber yards and planing mills belong. This group is reported by the Board to have had the worst experience of any group, and for this reason its rate is very high in comparison with others. Details in connection with each of the fatal accidents during 1918 and each of the serious, but not fatal accidents during the same year, were presented by the Chairman of the Board. It developed from a careful analysis of these that practically all the fatal and serious accidents had taken place in plants other than planing mills or lumber yards, indicating very clearly that the planing mills and lumber yards were being penalized on account of the unfavorable record of other plants in the same group.

An interesting point submitted by Mr. Price was to the effect that doctors bills paid by the Board during the year amounted to about 14 per cent. of the compensation paid to employees.

Another interesting revelation was that whenever possible the Board brings action against outside companies which may be responsible for accidents occurring to employees. Mr. Price said that the Board had recovered a great deal of money by suing third parties, such for instance, as street railway companies.

After some further discussion on minor points the deputation thanked Mr. Price and retired.

Licenses To Import Pitwood In England

The British Controller of Timber Supplies is now issuing licenses for the import of pitwood from Newfoundland, Spain and Portugal, to Bristol Channel ports. Purchases may also be made in Scandinavia and Finland, and licenses will be recommended for their import in sailing ships to Northeast coast ports.

If England carries out the proposed afforestation scheme, she will be far less dependent upon outside supplies of lumber. The In-

terim Forest authority has power to spend \$500,000 on investigation. It is maintained that the United Kingdom cannot run the risk of future wars without safeguarding its supplies, and it is claimed that by afforesting 1,770,000 acres, in addition to the 3,000,000 acres already under woodland, the country could be made independent of imported timber for three years in an emergency. It is pointed out by the Forestry Sub-Committee of the Reconstruction Committee responsible for the scheme, that during the five years preceding the war the home production of timber was less than 8 per cent. of the consumption, and that during 1915 and 1916 the cost of imported timber was \$370,000,000. Against this it is only claimed for the new enterprise that at the end of forty years, after absorbing at least \$75,000,000, it might possibly be self-supporting. The new authority propose to afforest 250,000 acres in the next ten years at an estimated cost of \$17,500,000.

Amend the Mechanic's Lien Law

Ontario Retail Lumber Dealers Also Desire Changes Made in the Business Assessment Act

A large deputation of lumber dealers from various points throughout Ontario who had been in attendance at the annual meeting of the Ontario Retail Lumber Dealers Association, called upon the Prime Minister, Sir Wm. Hearst, and the Attorney General, Hon. I. B. Lucas, of Toronto, at the Parliament Buildings, Toronto, on February 12th, in order to lay before them, on behalf of the Ontario Retail Lumber Dealers' Association, several matters in regard to the Mechanic's Lien Act, the Business Assessment Act and the Ontario Factory Act, in connection with which they wished to press for amendments or changes.

John Jennings, of the legal firm of Jennings and Clute, Toronto, who was retained by the Association to present its case in connection with the Mechanic's Lien Act, addressed the Prime Minister and the Attorney-General, pointing out that the present act was a very ancient piece of legislation, and had been altered greatly both by amendments and by judicial decisions until to-day the intended purpose of the measure, namely to protect the wage earner and the material man had been greatly reduced. Instead of giving the protection intended, the Act under its present form, was encouraging the speculative builder at the expense of the wage earner and the material man.

Mr. Jennings pointed out that in many of the modern Mechanic's Lien Acts now in force in the United States, a radical departure had been made as compared with the present Ontario Act. The Ontario Act provides that so long as the owner withholds 20 per cent. of the contract price, he is protected against an action by the wage earner or the material man for the collection of accounts due to them. In the modern acts this provision has been replaced by one which places upon the owner responsibility for the full amount of the contract price, practically constituting the amount of the contract price as a sum of money in trust for the wage earner and the material man. A number of other points of less radical importance were also referred to by Mr. Jennings.

The Prime Minister and the Attorney-General listened thoughtfully to the points presented both by Mr. Jennings and by several retail lumber dealers who were present, and in the course of a reply and a discussion Sir William Hearst said that it would be possible during the present session of the Ontario Legislature to put through such an extensive piece of legislation as a new Mechanic's Lien Act, but that between the present and the next session the Government would be pleased to go into the matter very fully, at the request of the Ontario Retail Lumber Dealers' Association, with a view to the possibility of introducing a new Mechanic's Lien Act as a Government measure during the following session.

In the meantime, if Mr. Jennings, on behalf of the association, would lay before the Government a memorandum, outlining any important amendments which they would like to have passed by the Legislature during the present session, the Government would give it their most serious attention.

These assurances were received by the lumbermen with much gratification and the deputation then presented a few other matters.

The Business Assessment Act

One of these was in reference to the Business Assessment Act, it being pointed out that lumber yards in cities of 100,000 population or over are assessed on the 50 per cent. basis, whereas coal yards escaped on the 30 per cent. basis. This, the deputation considered to be an injustice. Moreover, in big and small cities alike, the lumber yards are very heavily assessed on account of the large area of land necessary for the storage of their stocks, whereas other merchants carrying on business in a small store, and having possibly a much larger turn-over, escape with much smaller assessment. The Prime Minister replied that the Government would give this matter careful consideration.

Lumbermen Who Have Seats in Parliament

The Representatives of the People Who Divide their Time and Attention Between Products of Forest and Making of Laws of Canada

The Canadian House of Commons has among its members several leading exponents of the lumber industry. While the representation in the present Parliament at Ottawa, from this great producing class of the country is possibly not as large as it was some years ago, when the public interests of many sections of the Dominion were looked after by the manufacturers and dealers in forest products, there is still a fair proportion of men engaged in this vocation who assemble annually at the Capital to mould national views and assist in making the laws of the land. They enjoy a life long acquaintance and intimate association with the vast timber assets of Canada, and have accomplished much in converting these into finished commodities, which have, in numerous ways, helped to extend Canadian enterprise, develop our national resources and contribute in no small degree to the comfort, convenience and happiness of the people, domestically, industrially and financially, for there are some sixty thousand persons who find steady employment in the saw mills, lumber yards and logging camps of this country.

A brief sketch of the public life and activities of the lumbermen legislators of the Commons or the "popular chamber," as it is frequently called when referring to our legislative system, will be read with timely interest in view of the present session, when many important after-war problems and questions will come up for discussion and decision, not a few of which will have a direct bearing and prove a determining factor during the readjustment process and the transition from a war basis to a normal peace footing.

Hon. Edgar N. Rhodes, Speaker of the House of Commons, while a barrister by profession, is closely identified with the lumber and wood working industries, being president of the Brooklyn Lumber Co., Limited, and a director of Amherst Pianos, Limited. He resides in Amherst, N. S., and was first elected a member of the Federal Parliament for the historic county of Cumberland, in 1908, being returned at each subsequent contest. He was made Deputy Speaker of the House in January, 1916, and Speaker the following year, which responsible post he fills with honor, dignity and impartiality. As one of the Canadian representatives at the Imperial Parliamentary Conference, in London, England, in 1916, he accompanied the members of that body on their visit to the munition plants, the fleet and to the front. Hon. Mr. Rhodes has always taken a deep interest in all patriotic movements and is a member of the Dominion Council of the St. John's Ambulance Association, as well as a member of the Dominion Executive, and of the Nova Scotia Executive of the Canadian Patriotic Fund. He is one of the youngest men who have ever graced the Speakership in any legislative body, being only forty two years of age. A member of the Board of Governors of Acadia University, his sympathies are broad and his activities many in local and public affairs.

Hon. W. A. Charlton comes of a noted family, long identified with lumbering interests and the public life of Canada. He is a brother to the late John Charlton, M.P., for North Norfolk, who was one of the outstanding liberals of the Dominion for a generation or more. Mr. Charlton is of English and Scotch parentage. He served for many years as a member of the Ontario Legislature and was elected to the Commons eight years ago, as the representative for Norfolk county. Hon. Mr. Charlton is a prominent Liberal and a staunch Presbyterian. He has large timber holdings and now resides in Toronto, having an office in the Canada Life Assurance Building, King Street West.

A. T. Leger, who carried on a lumber business for many years, has had an active and varied career. He represents Kent county, N. B. For nine years he was postmaster of St. Louis and was later High Sheriff for the County of Kent, which post he filled acceptably until 1908. Mr. Leger was born in Cocagné, N. B., in 1852. He has fought many political fights in the Liberal cause, and although defeated several times, he always conducted a fair minded and honorable campaign. He resides in Richibucto.

A. B. Hunt, who represents Compton, was born at Bury, P. Q. His father was a member of the Provincial Parliament in Quebec, for some time, and the son follows in his footsteps in taking an active part in public life. He has been in a number of political battles and has been successful in all but two. As an indication of the ups and

downs of political life, it may be stated that, in the general election of 1911 Mr. Hunt was defeated by 76 votes, but in 1917 he was returned by the overwhelming majority of 1,903. Mr. Hunt is a lumberman, real estate dealer and farmer, being a director of the International Land and Lumber Company, the British Canadian Industrial Company and other organizations. He has also been Mayor of Bury Township.

Wm. S. Loggie is an enterprising business man and prominently associated with several undertakings. He was a member for Northumberland County, N. B., in the local Legislature, and some fifteen years ago resigned to contest the seat for the House of Commons. He was elected in 1904 and has been returned at every subsequent appeal to the people. Mr. Loggie is president and managing director of the W. S. Loggie Company, and financially interested in the operations of this concern, who are fish packers, lobster canners and manufacturers of building brick. Previous to entering the larger arena of public life, Mr. Loggie was an alderman and later Mayor of Chatham, where he resides. Politically he is a Liberal and in religion a Presbyterian. The W. S. Loggie Co. operate lumber mills at Inkerman, Gloucester County, and at Kouchibouguac, Kent County, N. B., and have timber limits in Gloucester County.

Alexander McGregor is of Scotch extraction and is the Conservative member for Pictou, N. S., being elected in 1917. He resides in New Glasgow and is a well known lumberman, and a director of Rood and McGregor, Limited, manufacturers of lumber. He has one son, Capt. A. F. McGregor, M.D., who served overseas with the Canadian Expeditionary Forces. The representative for Pictou was born in 1864, at McLellan's Brook, and his father was a well known railway contractor, who built a section of the Dominion Government Railway in Cape Breton, and other lines in Nova Scotia. Mr. McGregor is a prominent Presbyterian and his mother was the daughter of Rev. Alexander MacGillivray, one of the pioneer ministers who came from Scotland to Pictou.

Col. Herbert J. Mackie comes of a widely known family of lumbermen, his father being the late Thos. Mackie, who sat in the House of Commons as the representative for North Renfrew for many years, and now the son is following in the wake of his worthy sire. Col. Mackie has long been interested in military matters, and formerly commanded the 42nd regiment. He served in South Africa in the R. C. F. A., participating in the operations in Cape Colony in 1899 and 1900. He holds a Queen's medal with one clasp. Born in Pembroke, in 1876, he recently celebrated his 43rd birthday. Col. Mackie in stature and build is almost the equal of his late father, and is said to be the largest man now sitting in the Federal Parliament. He is interested in a large lumbering concern in British Columbia and was elected as a Unionist in the campaign of 1917.

Geo. B. Nicholson, who is a member of Austin & Nicholson, pulpwood dealers and general contractors, is the alert representative for East Algoma. He resides at Chapleau, Ont., and the firm have sawmills at Nicholson. He began the railway construction business in 1884, continuing until 1901, when he established the present business in partnership with James Austin. Mr. Nicholson was born in Westmoreland, P. E. I., and lost his only son, Lieut. L. W. Nicholson, of the 4th C. N. R. Battalion, who was killed in France a few months ago. Mr. Nicholson is a Unionist and an Anglican.

Peter R. MacGibbon is the representative of Agenteuil, and was first elected to the Commons in 1917. He lives at Lachute, P. Q., and is engaged in lumbering. When a boy, Mr. MacGibbon thought that he would like to enter this business as he heard that those, who had the most wealth at that time, had been dealing in lumber or timber limits. He served for some time in the employ of the late Hon. John Hamilton and Brothers, on the River Dumoine, near Pembroke. Learning something about the business he found that the operators cut the best of a tree leaving two thirds lying to rot; in fact, all the lumbermen did so at that time. Coming home, young MacGibbon told his father that lumber would in a few years be very scarce, although it took twenty-five years longer than he had counted on. With this

Lumbermen Legislators in House of Commons

Hon. E. H. Rhodes, M.P., Speaker, House of Commons, Cumberland County, N.S.

F. N. McCrea, M.P., Sherbrooke, P.Q.

Geo. B. Nicholson, M.P., Algoma East, Ont.

Hon. W. A. Charlton, M.P., Norfolk County, Ont.

Alex. McGregor, M.P., Pictou County, N.S.

A. T. Leger, M.P., Kent County, N.B.

E. W. Tobin, M.P., Richmond-Wolfe, P.Q.

Col. H. J. Mackie, M.P., North Renfrew, Ont.

R. E. Truax, M.P., South Bruce, Ont.

A. B. Hunt, M.P., Compton County, P.Q.

P. R. MacGibbon, M.P., Argenteuil County, P.Q.

Wm. S. Loggie, M.P., Northumberland County, N.B.

in mind the subject of this reference commenced to buy lots with spruce on them, one lot or half a lot at a time, according to what money could be gathered up to pay for them. Now in partnership with his brother, Mr. MacGibbon has 25,000 acres of timber limits within sixty miles of Montreal, and his saw mill is at Lachute, Que. There spruce deals are sawn especially and, with the lowest freight rates, no difficulty is experienced each season in disposing of the output at a good figure.

Francis N. McCrea is a well known figure in Parliamentary life. Previous to serving in the larger sphere of activity he was councillor for Durham, P.Q., for four years and also Mayor, for eleven, and later was warden of Drummond county for a long period. In 1901 he moved from South Durham to Sherbrooke to reside, and was an alderman for the north ward in that city for eight years. Mr. McCrea started in the lumber business at the age of 20, and was in the employ of C. C. Church, at South Durham, and later was brought into partnership. He is to-day a leading lumberman, being president of the Sherbrooke Lumber Company, Devon Lumber Company, and the Brompton Pulp and Paper Company, vice-president of the Lotbiniere Lumber Company, and the Chaudiere Lumber Company, and a director of the Nicolet Falls Pulp and Lumber Company. In 1902 Mr. McCrea became president of the Lotbiniere and Megantic Railway. With his associates, Mr. McCrea bought 500 miles of Government timber limits and organized the Sherbrooke Lumber Company. He also took part in the organization of the Brompton Pulp and Paper Company, which acquired in 1907 the Royal Paper Company's mills at East Angus and the vast timber limits on the St. Francis River. Mr. McCrea has been a member of the House of Commons since 1911, and is a Liberal.

E. W. Tobin, who lives in Bromptonville and represents Richmond and Wolfe in parliament, is a lumber dealer and general merchant. He is president of the Lotbiniere Lumber Co., Trois Pistoles Pulp and Lumber Company, and a director of the Brompton Pulp and Paper Co., and several other industrial concerns. For the last eighteen years he has been a member of the House, and, previous to coming to Ottawa in a representative capacity, he was Mayor of Brompton Falls and Bromptonville for several years and also warden of the County of Richmond, Que.

R. E. Truax, of Walkerton, Ont., is a sawmill owner and operator, and proprietor of the Walkerton Wholesale Sash and Door Factory. He was a councillor in Walkerton for some years and was Mayor for two years after which he was a reeve for four years. In 1894, he was elected a member of the local Legislature and at the next general election he was returned by acclamation. In 1911 Mr. Truax was successful in capturing South Bruce for a seat in the House of Commons. Born in Montreal, in 1847, he was educated in Walkerton, where he has spent the greater portion of his life, and enjoys a wide measure of confidence and respect.

One Standard Inspection Rules Coming

"It is extremely gratifying to know that you are committed to a single standard of inspection, and with the sincere and earnest efforts and co-operation of all of those who are interested in this project, I feel certain that our purpose will eventually be accomplished," says B. F. Dulweber, of Greenwood, Miss., Chairman of the Inspection Rules Committee in a recent letter to Frank F. Fish, of Chicago, secretary-treasurer of the National Hardwood Lumber Association.

Mr. Dulweber concludes: "Relative to the concluding paragraph of your letter, if in making this suggestion you had in mind our submitting any definite rules or specifications on lumber, I am sorry to state that we are not prepared to do this at the present time. The basis on which we are proceeding, and as expressed in copy of resolutions sent you with my letter of January 11, is that all inspection rules must be constructed with a view of answering as closely as possible the specific use to which the lumber is to be put, thereby reducing waste to the minimum. To work this out properly, will require time and a careful study of the manufacturing conditions and problems existing in the various consuming trades. As this work is proceeded with, we will be very glad to submit for your consideration the conclusions drawn from the results of our investigations, and I sincerely hope that this will eventually result in one standard of inspection, which will minimize waste in hardwoods, and prove beneficial alike to the producer and the consumer."

Secretary Fish, in answer to the foregoing, sent the following to Chairman Dulweber, of the Inspection Rules Committee:

"I note from its contents that your committee, representing the American Hardwood Manufacturers' Association, is not prepared at this time to submit any definite rules or specifications on hardwood lumber. Such being the case it will doubtless be satisfactory to you and to those whom you represent for the National Hardwood Lum-

ber Association to hold the entire matter in abeyance until you are prepared to submit the conclusions drawn from the result of your investigation. Upon receipt from you of a summary of those conclusions I shall be pleased to submit them, in turn, to the membership of the National Hardwood Lumber Association for the consideration that they may merit."

The Inspection Rules Committee of the National Hardwood Lumber Association will meet in Chicago on Saturday, March 22. The twenty-second annual convention of the Association itself will be held in the same city on June 19 and 20 next.

Lawyer, Legislator and Lumberman

Hon. C. W. Robinson, Moncton, N.B.

Hon. Clifford William Robinson is a lawyer, a legislator, and last, but not least, a lumberman. It was largely through his hearty invitation, extended at the November session of the Executive, in Montreal, that the recent annual convention of the Canadian Lumbermen's Association was held in St. John. That the gathering was such a pronounced success may be attributed to the splendid welcome accorded the guests by the wholesale lumbermen and manufacturers of the Province of New Brunswick. Hon. Mr. Robinson was one of the speakers at the brilliant banquet held by the association; and took occasion to remind his hearers that much had been heard about the importance of St. John as a seaport city and a great thriving shipping centre. He

added, however, that there were other places on the map, and among them was Moncton, which was a thriving municipality of nearly 20,000 people and growing rapidly. Mr. Robinson never loses an opportunity to speak a word in support of his native city where he was born in 1866. Called to the New Brunswick bar in 1893 he has since practiced law. He first aspired for political honors in 1896 when he was an unsuccessful candidate for House of Commons in Westmorland. The next year, however, he was elected to the New Brunswick Legislature for this county and has been returned at each subsequent contest. Of tall, erect carriage Mr. Robinson is a commanding figure and has loomed large in administrative affairs in his province. He was Speaker of the Assembly for six years and a member of the Cabinet without portfolio and regarded as one of the shrewdest and ablest parliamentarians in the east. Not only has he rendered splendid service in provincial affairs, but he was for several years a member of the City Council of Moncton, being mayor in 1897. He was in the Municipal Council of the County of Westmoreland and was elected president of the Board of Trade for two terms. Possessing public spirit Mr. Robinson is also active in a business sense being president of the Record Foundry and Machine Company of Moncton and president of Robinson, Wright and Company, who operate extensive sawmills at Shulie, Cumberland county, N.S. The member for Moncton is a progressive business man, and met a great number of his western lumbermen friends at the recent conclave in St. John.

Responsibility of Individual Limit Holders

The Quebec Government has introduced a Bill to compel holders of licenses who cut timber on Crown lands to patrol their limits. The members of the St. Maurice, Laurentian, Southern St. Lawrence, and Ottawa Forest Protective Associations feel that, while taking measures to protect their own limits, they are in danger from fires occurring on adjoining limits which are not patrolled, and the owners of which are not members of any association. The Bill is designed to force such limit holders to take precautions. It provides that every holder of a Crown license must have his limits patrolled between the 1st of May and the 1st of November, by competent fire rangers paid and selected by him, but appointed by the Minister of Lands and Forests, and the latter may prescribe the number of fire rangers who must be employed. Such fire rangers must devote their whole time to the patrol work. The minister may, also, however, require that the limits be patrolled in the month of April.

Forestry Men Discuss Important Topics

Progressive Action on the Problems of Conservation and Forest Fire Protection at Recent Gathering in Montreal—The Proceedings Reviewed

Dr. C. D. Howe, of the Forestry Department, University of Toronto, declared that the only way to get accurate knowledge of our wood supply was by taking a forest survey. At present they did not know these resources, and the estimates were more or less guess work, and he believed were exaggerated. From his knowledge of the spruce in the St. Maurice Valley he believed that in thirty years from now they would be disappointed in expecting a large and profitable crop of spruce.

Mr. W. E. Golding, Geo. McKean & Co., St. John, N.B., asked the conference to pass a resolution in connection with fire protection on the Canadian Government Railways, so that these lines should be brought under the jurisdiction of the Railway Commissioners. The Government, he asserted, were the greatest sinners in the Dominion in the matter of forest fire protection, the work being done very carelessly.

Mr. Ellwood Wilson (Laurentide Co.), insisted upon the necessity of an accurate survey of the timber lands of the country, believing that this would show a deficiency in what was generally supposed to be the quantity of lumber available. The Government should release the aeroplanes to make a rapid reconnaissance of the timber supply; the cost would be relatively small, and the results would more than repay the outlay.

Mr. R. Kernan (Donnacona Paper Co.) stated that his experience was that there was practically no accurate knowledge of their timber supplies.

Mr. Clyde Leavitt stated that the Conservation Commission were working in conjunction with various companies with a view to secure the required information.

Mr. W. Little declared that they might rely on it that if the lumbermen said there was no lumber in a district, there was no lumber.

The First Systems of Cutting Wood

In the absence of Hon. W. R. Brown, of the Brown Corporation, Berlin, N. H., his paper on silvical systems in New England, was read by Mr. E. R. Linn, the forester of the company. This dealt in a comprehensive way with the results of experiments, over twenty years, of four systems of cutting of spruce, fir and pine, with a little cedar, hemlock and tamarack mixed in. The wood is cut to produce lumber and pulpwood, being taken in 38 ft. logs for lumber and 4-8 and 12 ft. lengths for pulp. The present method of cutting on the company's land is to follow a nine-inch stump diameter-rule for spruce and pine and cut the fir and other soft woods clean, and be exceedingly careful to protect and save all the young trees and sprout growth possible while getting out the mature timber. This leaves in a spruce type stand a sufficient number of vigorous young trees to restock the land, able alike to produce seed and elastic enough to bend before the gales, and if blown over not of sufficient content to make a large loss in the aggregate. Hard woods wherever possible are taken. Spruce stands in heavy hard woods are either cut clean or allowed to remain to such a time as a means of getting the hard wood to market can be found. Frequent modifications were made to suit local conditions based on a preliminary survey, plotting of areas, laying out of jobs, marking trees to be left if necessary, careful supervision of cutting and frequent inspection by a trained forester.

The Brown Company has drawn the following conclusions, which may be of interest to Canada, as the general principles of the cutting apply over the same region and species, although modifications are necessary.

1st. The theory of diameter limit in cutting should be based on the average age of the stand, instead of on the average size of the trees. In Quebec a study of the boundaries and years of the great fires would give a reasonably close estimate of the location of even aged stands and form a basis of a silvical cutting system applicable to each.

2nd. Mature old growth soft wood stands are commonly best handled if cut clean, occasional seed trees being left and sacrificed for the reproduction which they may bring, and even these seed trees are not always necessary to a splendid natural reproduction of young soft woods.

3rd. In uneven aged mixed stands in deep soil and well protected from the wind, thinnings can be made to advantage by selective cutting, provided the hard wood is always thinned also.

4th. In even aged soft wood stands where the soil is deep

and there is protection from wind throw, the strip or group system of cutting can be practiced successfully.

5th. Fir, balsam should be cut practically clean in any silvical system practiced, as it often proves to be unsound and matures and dies rapidly and needs no assistance in re-seeding, and if not thinned will reseed in such abundance as to check the more valuable young spruce.

6th. Most land originally suitable for soft wood, carrying a mixed soft and hard wood growth, will restock itself quickly and abundantly if the hardwoods are cut down or thinned out. The taking of hardwood is, of course, largely dependent on nearness to market and transportation, and it is not always possible to remove it. When the region is remote and soft woods reproduction is desired the girdling of hard woods should be seriously considered.

7th. Any selection or group system of cutting presupposes more or less loss from blow down and this should be carefully balanced against the opportunity to return and the cost of salvaging this every year to market. Clean cutting it therefore particularly desirable for distant and inaccessible places.

The Splendid Work Done in New Brunswick

Dr. E. A. Smith, Minister of Lands and Forests, New Brunswick, described in detail the work of survey and forest protection work in that province, and the various acts passed dealing with forests. The co-operation of the lumbermen, he added, was of great value in obtaining success under the various measures of legislation. If it was found that they were cutting more than the annual growth they would have to cry stop. He declared that he was not a popular Minister of Forests, as he had had to call a halt in several ways.

A resolution was passed in favor of the Canadian National Railways being under the control of the Board of Railway Commissioners, in connection with the protection of forests from fires, and urging that the necessary legislation be prepared and be brought before the next session of Parliament to make the same effective.

Another resolution was passed that:

"Whereas an accurate survey of all standing timber in Canada, showing the various kinds of lumber, the quality, location and accessibility, together with available means of transporting same to the nearest market, also a report of all cut-over lands which are suitable only for forest growth, with the extent and location of same, would be most valuable information, not only to lumber operators, but to the various Dominion and provincial governments, enabling them to develop to the full extent a permanent forest policy which would have the effect of conserving the great natural resources contained in Canada's forests; be it resolved that the Canadian Forestry Association urge upon the proper governmental authorities to provide adequate financial assistance, and clothe the Commission of Conservation with the necessary authority for the purpose of accomplishing the end in view; further, that the lumbermen of Canada pledge their assistance to the Commission of Conservation to this end.

The opening speech was by the Hon. Jules Allard, Minister of Crown Lands for the Province of Quebec, who reviewed the efforts of the government to protect the forests against fires, and the classification of lands so as to group together those fit only for the growing of timber. These efforts had resulted in a vast improvement, working in conjunction with the various associations.

Brigadier-Gen. J. B. White, D.S.O., in a short review of the work of the Canadian Forestry Corps in France, expressed a hope that Canada would go into tree planting in earnest. The victory of the allies was greatly facilitated by the enormous forests in France and England, which saved a tremendous amount of shipping tonnage. At one time the situation was so serious that it was urgent to produce great quantities of lumber in France. Canada was, therefore, asked in 1916 to provide forestry companies, and 56 companies were sent across. The indents provide for the producing of 210,000 tons of timber, and this was done with the exception of 5,000 tons in a short period. In addition there were 23 companies working with the French army. This was possible owing to the foresight of France in planting her great forests. General White then described the chief forests

Hon. Jules Allard,
Minister of Lands & Forests for Quebec

Brig.-General J. B. White,
Suggests Tree Planting for Returned Men

Robt. P. Kernan,
New Chairman of the Woodlands Section

in that country, and stated that in one section an estimate showed there was 11,000,000,000 feet of maritime pine, and this in a district which before was a sand desert.

The Havoc Wrought By the Huns

Speaking of the devastation by the Germans, the General stated that in central France the Hun had put in mills and shipped the lumber to Germany. In one forest eleven mills had been installed and 30,000,000 million feet taken away. The Germans simply robbed the country of everything possible.

Gen. White suggested that the returning soldiers should be employed in planting trees, and for this purpose the lumbermen and the government should get together. A wonderful work could be done not only for the country but also for the men. Every dollar spent in this way would give back many dollars. It might be necessary to bring pressure to get this measure through, but it should be done if possible.

Professor J. M. Swaine, Entomological Branch, Ottawa, referred to the injury done to balsam by the bud worm and advocated the burning of the slash as a preventative of the disease. Slash was the garbage of the forest, and just as the city garbage should be destroyed, so that of the forests should be destroyed.

Mr. Clyde Leavitt, chief forester of the Conservation Commission, read a paper prepared by Mr. Ellwood Wilson, in which the latter advocated the cutting of debris after logging or shortly after, so as to prevent fires on cut-over lands and old burns. This could be done by the logging crews, but the woods managers objected to do the work, as it would add to their expenditure, and they did not consider it their business to do more than cut and haul the logs. The work could also be done by the fire rangers in the winter, and the cost borne by the operators on the basis of acreage.

Mr. Gerard Power was of opinion that the Quebec Government should take immediate action re the destruction of balsam, which he was afraid was otherwise doomed to destruction. A small organization might be formed to deal with this question.

Disposing of Slash on Western Reserves

Mr. T. W. Dwight, assistant to the Director of Forestry, Ottawa, described the system adopted by the Forest Department, in disposing of slash on the reserves in the West. He argued that brush disposal should be made a part of the logging operations, as it was only in this way that a reasonable cost could be reached. The consensus of opinion of those who had disposed of slash under the Forest Department's direction was that brush piling was practicable and that the cost was by no means prohibitive. The cord wood operators especially claimed that they got enough extra material to pay for the cost of disposing of the brush.

A discussion followed on the question of the disposal of slash, Dr. Howe suggesting a small committee to take charge of experiments in slash disposal.

Mr. Whitmer remarked that the question should be taken up from the view of the practical lumberman.

Brigadier-General White said to make a good job would involve a large sum. For a firm taking out from 25,000,000 to 100,000,000 feet it was not possible to burn up the debris, while the question of injury to the standing timber would have to be taken into consideration. It was a big problem to burn the debris throughout the province.

Mr. Golding would like to see a practical lumberman clearing an

acre for a dollar, as was suggested. In New Brunswick they could not get a smile for a dollar. In his opinion it was not possible to clear up all the slash.

Slash is Menace to the Lumberman.

Mr. Angus McLean, of the Bathurst Lumber Co., said every practical lumberman was interested in this subject, as slash was a menace to lumbermen. Closer cutting had improved the situation. Less slash was being left to-day, and he estimated that they obtained only fifty per cent. of the slash when compared with the times during which lumber was simply taken for sawmill operation. He suggested that a number of practical lumbermen get together and agree to establish a camp in which operations to burn the slash would be carried out. They could compare costs and see what, if any, damage was done to the standing timber.

Messrs. A. MacLaurin and J. H. Addison also took part in the discussion.

The following committee was then appointed: Messrs. Angus McLean (Bathurst Lumber Co.), Whitmer; J. M. Dalton, St. Maurice Paper Co.; M. C. Small (Laurentide Co.); Gerard Power (River Ouelle Pulp & Lumber Co.), and Black (J. R. Booth).

The Importance of Aerial Photography

The opening paper at the afternoon session was by Lieut. Lewis, of the Royal Air Force, who spoke on "Aerial Photography." After describing the developments in aeroplanes, he discussed the question of the use of these machines and also of aerial photography in connection with lumbering. He believed that this photography would be of immense value in the industry. He suggested that aeroplanes should be fitted with photographic outfits for the purpose of mapping the country. The lumbermen might make arrangements with the government to have their limits photographed, merely paying rent for the machine and the cost of photography. This could be done for about \$4 per dozen photos. A small area should be surveyed, and then the area photographed in the spring and also in the summer. These photos could be taken from a known altitude in order to arrive at scale. They could then be used as standards in analyzing photos of any tract of timber land, and an accurate estimate could be made of standing timber, burnt over areas, etc. A continuous photographic map of any area could thus be obtained. Each company could have an actual photo of its own limits and so keep track of the progress of the work. Photography was not a means of dispensing with cruisers, but it would be of great assistance to them. One cruiser had said that he could do as much work in a day with an aeroplane as he could in 21 days with ten men. Good photographic records would bring home to the government the amount of work required to keep up the timber for future generations. The address was illustrated with a large number of slides showing the distinctness with which objects such as trees could be distinguished.

The chairman remarked that he knew of one instance where a company could have saved \$90,000 if an aeroplane had been used in looking over an area purchased, and which included a large burnt over area.

Utilizing Hardwoods in Pulp Industry

Mr. Gerard Power then took the chair, as president of the Woodlands Section of the Canadian Pulp & Paper Association.

Mr. Volkmar presented the report of the committee on the utiliza-

tion of hardwoods in the pulp industry, in order to relieve the drain on the softwoods timber supply. He gave the results of an experiment on a commercial scale in an ordinary mill; the yield was greater than for soft wood and less power was necessary for grinding. The felling of the hardwoods offered no difficulty and the cost would probably not be any higher than for softwoods. Skidding and hauling might be more difficult. Driving would probably have to be done on the larger streams, and Brigadier-Gen. J. B. White had made some experiments which it was thought were successful. On streams which were large enough the logs could be loaded into barges and taken down stream to the mills, probably at as reasonable cost as by driving. The committee were of opinion that a hardwood operation should be undertaken by some mill interested and accurate costs kept on each step of the work, the cost to be borne by several mills.

A very exhaustive report by the Committee on Logging Improvements was read by Mr. Ellwood Wilson. This dealt with building camps, felling, company camps, skidding, hauling, culling, driving, and sorting. It was followed by a discussion in which some points of the report were criticised, and accordingly the report was referred back to the committee.

The discussion was taken part in by Messrs. R. Kenny, Whitmer Golding and G. White, the first two taking exception to certain parts of the report referring to woods foremen. Mr. White made a number of suggestions for improvements as referring to the southern part of New Brunswick, such as the substitution of cement dams for the present driving dams, part of the expense of which should be borne by the government; more substantial camps to make them permanent; better methods of piling lumber, improved yarding, more attention to the cutting of even lengths, and charging up to the jobbers the cost of waste. He also suggested that they should develop the hardwood business, which was of such importance to New Brunswick.

The Officers of Woodland Section

The following were elected officers of the woodland section: Messrs. R. P. Kernan, Donnacona Paper Co., chairman; M. C. Small, Laurentide Co., vice-chairman; R. F. Kenny, Jas. MacLaren Co., Buckingham, P.Q.; A. J. Price, Price Brothers, Quebec, and Ellwood Wilson, Laurentide Company, members of the council.

Preferential Treatment for Canadian Timber

The Stockholm correspondent of the "Timber Trades Journal," London, Eng., in a recent letter on the Swedish market, has the following of timely interest on the production, outlook and price in Sweden and the prospects of preferential treatment of Canadian forest products by the British Government.

A large quantity of snow has fallen in Sweden during the last fortnight, and the weather, which was comparatively mild up to the middle of the present month, has become more severe. Log-getting in the woods is pursuing a normal course, and is not quite so much hampered as last winter owing to a deficiency of foodstuffs for the workmen. Fodder for horses is still scarce and dear, and from 35 to 40 kronor per diem has to be paid in Norrland for man and horse.

The raw material for sawing during 1919 and spring, 1920, will consequently be very costly, even more so than the logs now being used, expensive as the latter are. For all these concerns that are obliged to purchase a large percentage of their requirements in the open market, the future outlook is very serious, and it is already quite evident that a heavy loss will be sustained by such mills before the raw logs now being treated for can be converted and the produce turned into money.

The whole situation for the immediate future hinges on the result of the negotiations between the deputation of the Swedish Sawmill Owners and the British Timber Controller, now taking place in London. Nothing has yet transpired outside the Swedish Wood Goods Export Society at time of writing in respect to these negotiations. It is currently reported from Canada that arrangements have been come to by the Canadian shippers of sawn wood and the British Controller, through the medium of the Canadian Government, for the f.o.b. delivery of about 500,000 standards to the United Kingdom and the Continent during 1919. The British authorities are to provide ship-room for these goods. It is idle to comment on the effect of this transaction until the rumor has been corroborated from an authoritative channel. If it turns out correct, it will prove that the apprehended dearth of tonnage during 1919 will be less than anticipated.

It seems now to be tacitly acknowledged that no goods to speak of can be expected from any other part of Russia except the White Sea (and not much from there) during the coming season. That being so, it is more than likely that the Conference now sitting in Paris will, amongst other matters, demand building material for France and Belgium from the German Government. This will presumably be dependent on transport facilities, but there is more than a probability that the question has been already settled in principle.

With regard to the crucial question of what it costs the average sawmill owner to put a standard of sawn wood free on board

ship at the ports of the Lower Gulf between Gefie and Sundswall, inclusive, I have had figures put before me from an authoritative source showing that the present overhead figure demanded, namely, 410 kronor per standard, leaves nothing more than a working profit. This calculation (made on the basis of 300 cubic feet of logs, true measure, at 80 ore per cubic foot) proves that the present overhead cost will be, roughly, 388 kronor. This is after allowing about 20 kronor for the value of the offal obtained from these 300 cubic feet of raw wood. I am aware that the Sub-Committee on British Forestry, which reported a few months ago, estimated that much more than 165 cubic feet of sawn wood could be obtained out of the 300 cubic feet of logs above referred to, but their estimate was wrong, as far as Swedish experience goes. With band-saws more can be obtained, but the logs in Sweden are too small to enable them to be used to advantage, and all attempts to do so have been unsuccessful.

The question of preferential treatment of Canadian sawn and planed wood to the United Kingdom is likely to become actual at an early date. Whether for better or worse, the late election has, no doubt, settled the question in principle, and a differential duty will probably be levied on wood from the North of Europe outside allied countries.

Mobilizing the Timber Wealth of Canada

At the Central Technical School, Toronto, recently, a lecture on "Mobilizing the Forests," by Robson Black, Secretary of the Canadian Forestry Association, Ottawa, attracted a large audience. Mr. Black spoke of Canada as possessing the third largest forests on the earth's surface. Russia outstripping all other countries, while the United States came second with about five times the timber contents of Canada. Two-thirds of the Dominion's area was unfit for agriculture, and if the bulk of that non-agricultural section could be kept forever under tree crops the nation could attain by the easiest known method a greater prosperity than had ever been dreamed of.

The days of the pioneer "bushwhacker" are almost over. Except for a very few areas, the old-time problem of redeeming the land from the forest has become a national task of redeeming the land for the forest. There is more land stripped of forest that must be put back under timber crops than there is bushland that should be cleared for farms.

Canada holds the only coniferous timber supply in the British Empire," declared the speaker, "the only supply that possibly can release Great Britain from dependence on Russia and Scandinavia for her 600,000,000 cubic feet annually required." Mr. Black referred to the alarming fact that Canada's forests east of British Columbia are in a state of rapid decline, with practically no effort by Provincial and Federal Governments to study methods of permanent timber yield. As a disquieting contrast to this, one learned that Germany has doubled her timber yield during the last generation without reducing the capital stock. This contrast should be taken as highly significant, particularly when Canada is adopting many costly expedients to bolster up employment and encourage industry and foreign trade.

What are the Resources of Ungava?

A. M. Tessier, member for Rimouski, desires the Quebec Government to take more interest in the great section of new country called Ungava, which was annexed to Quebec in 1912, and about which the Government knows little more today than at the time it received this addition. No revenue whatever has been received from the new territory.

Mr. Tessier has given notice of a motion asking that the Government take steps to make an inventory of the new territory to get information of its mineral, water-power and other resources.

One of the biggest lumber men in Canada, in speaking of the Hamilton River, which runs into the ocean at about a point where Labrador joins Ungava, told Mr. Tessier that it was not a dream to believe that at some day in the near future the waterpower from this river could be run through a cable under the ocean to run the cotton mills of Manchester. The report as to the possibilities of water-power of the Hamilton River puts the estimate higher than the Niagara Falls development.

Spruce was not so largely used for wood pulp in 1917 as in 1916, according to Franklin H. Smith, statistician in U. S. Forest Products, largely due to its restricted supply, but balsam, fir, tamarac and some hardwoods such as beech, birch, chestnut and maple were consumed in larger quantity than the preceding year. Data concerning the consumption of pulpwood reveals an almost unbroken annual increase, with spruce still far in the lead, forming 56 per cent of all the pulpwood manufactured, with hemlock 14 per cent.

Mr. Nicholson Locates in Vancouver

Burlington Man Becomes Western Manager for Toronto Wholesale Lumber Firm—F. W. Gordon Coming East

Allan S. Nicholson of the Nicholson Lumber Company, Burlington, Ont., who has been identified with the progress and upbuild of that town for many years, left recently for British Columbia, where he has been appointed western representative of Terry & Gordon, Toronto, and will have his office at 408 Metropolitan Bldg., Vancouver. Arriving in that city he met H. J. Terry, of Toronto, and spent some days with him previous to being installed in his new post as manager of the Vancouver branch.

Frank W. Gordon, who has ably filled this position since 1915, will shortly come to Toronto to reside and will be attached to the head office sales staff. Mr. Gordon has lived in Vancouver since 1912 and is thoroughly familiar with B. C. forest products from the manufacturing, buying and selling ends. He is well known in Toronto, where he has many friends in the trade, being a brother of A. E. Gordon, junior member of the firm.

Mr. Terry himself has just returned from a successful and extended business trip to the Mountain and Coast mills. He made a

Frank W. Gordon,
The Westerner coming East

A. S. Nicholson,
The Easterner going West

tour of inspection of their stocks of lumber which are put up specially for their Ontario and Eastern trade, and further extended the Western connections of the house.

Mr. Nicholson, the newly appointed manager of Terry & Gordon's interests in the Pacific Coast province, is a successful and enterprising business man. He is well and worthily known in the retail ranks and was recently re-elected a director for the Western district of the O.R.L.D.A. He has played an important part in the industrial and public activities of Burlington, being chairman of the School Board for the past two years, and during the war a leading worker in all patriotic movements. When the Victory Loan campaign came along he acted as secretary in a most efficient manner. In the management of the Nicholson Lumber Company which has developed rapidly of late years, the subject of this reference displayed energy and aggressiveness. He still retains his interest in this industry which will be managed by his thoroughly trained staff.

A complimentary banquet was tendered Mr. Nicholson at the Royal Connaught Hotel, Burlington, on February 13th, by the citizens of the lakeside town, who feel that his removal to the West is a distinct loss. During the evening H. A. Graham, Deputy Reeve, presented the guest, on behalf of the leading residents of Burlington, with a handsome club bag as a token of their esteem and appreciation. The recipient thanked the donors for the honor bestowed upon him and briefly referred to his work in the West. He urged the people of Burlington to organize a Board of Trade and assured them that he would always retain a very warm spot in his heart for the town. Should he return he hoped that he would find it the same live, progressive place that it had always been.

John Nicholson, father of the guest of the evening, was present and spoke of the honor conveyed on his son, thanking the citizens cordially.

E. C. Barre, of Sarnia, general manager of Cleveland-Sarnia Sawmills Co., Limited, was a recent visitor to Toronto, and called upon many members of the trade.

Getting Ready for the Larger Business

On every hand there is evidence of faith in a revival in business, and new companies and firms are being formed to participate in this larger commerce. One of the new companies recently formed is the Imperial Trading Company, with head offices at the Herald Building, Montreal.

This company intends to deal in iron, steel, copper, brass, lead, spelter, and other metals; in rails, railway equipment; motors, generators, transformers, and machine shop tools; wool felt, cotton waste and other textile products; also pulp mill and mining machinery.

The company is also negotiating for a number of sole agencies for Canada, of important products from the Orient, including China, Japan, East Indies, Malay States, Ceylon, Indo-China, Straits Settlements, etc.

The President is Major G. A. E. Bury, son of Sir George Bury. Major Bury, before joining the overseas forces, was a prominent barrister in Winnipeg. He returned to Canada recently after over three years with the Canadian Expeditionary Force. He is a graduate of the University of Manitoba.

The Vice-President and General Manager is Mr. E. C. Peterson, formerly District Manager of the Northern Electric Company, Limited. Prior to that he was in charge of the Production Department of the Western Electric Company, Chicago, with which he began his business career in September, 1899, immediately after graduating from the Iowa State College, both in mechanical and electrical engineering, receiving the degree, B. Sc.

Personal Paragraphs of Interest

W. Gerard Power, President of the Canadian Lumbermen's Association, was a recent visitor to Montreal.

Lucien B. Howland, of the firm of Lauder, Spears and Howland, Toronto, is spending the winter months in California.

Sam D. Smith, wholesale lumber, has removed his office from the tenth floor of the Kent Building, Toronto, to Room 502 in the same building.

J. B. Knox, of Knox Bros., Montreal, is on a visit to England. His brother, A. M. Knox, from the B. C. office, is in charge of the Montreal business.

H. J. Terry, of Terry & Gordon, Toronto, has returned from an extended and successful business trip to the Coast and Mountain mills in British Columbia.

R. F. Carter, Secretary-Treasurer of the Fesserton Timber Co., Toronto, is spending the winter months in Florida. He recently suffered an attack of influenza and pneumonia, and is now regaining his health in the sunny south.

Speaking in Montreal on February 23, the Hon. T. A. Crerar, the Minister of Agriculture, declared that there were immense possibilities for the Canadian pulpwood, pulp and paper industries. He also asserted that Canada had been lacking in the direction of reforestation, and that we must pay more attention to this subject if Canada desired to conserve her forest resources. The destruction of timber by fire was appalling, and more efficient protective measures were imperative.

Friends of Major-Gen. A. D. Macrae, of Vancouver, declare that shortly before the general sailed for Canada he was offered a knighthood for his services rendered while quartermaster-general of the Canadian forces and later as director-general of the British Ministry of Information, but that the general declined the honor. Major-Gen. Macrae during his long stay in England, had the reputation of getting things done. Before the war he was connected with the land department of the Canadian Northern Railway, and with the Canadian Western Lumber Company, of Fraser Mills, in which organization he is still largely interested. On the dissolution of the Ministry of Information, after the armistice, he returned to Canada, and was in Toronto for several weeks prior to leaving for Mexico.

Sir Rodolphe Forget, ex-M.P. for Charlevoix, P.Q., passed away recently after an illness of some five weeks. He was 58 years of age and was one of the most prominent financiers in Canada, being a multi-millionaire. Sir Rodolphe was a born organizer and was an important factor in many of Canada's most potential and wealth producing industries. One of the promoters and also a director of several light, heat, power and railway companies, as well as other organizations, he was closely identified with the pulp, paper and lumber business. He was one of the founders and a director of the East Canada Power & Pulp Company, the Wayagamack Pulp & Paper Company, and the Quebec and Saguenay Railway Company, which passes through rich pulpwood and timber districts. In 1911 he was offered a portfolio in the Cabinet of Sir Robert Borden, but declined. Sir Rodolphe was twice married and leaves a widow, three sons and two daughters. He was created a Knight Bachelor in 1912.

Purpose and Progress of Fire Insurance

Its Origin, Expansion, Adaptability and Protective Features Outlined—Fire Waste in Regard to Specialized Indemnity for Lumbermen

E. D. Hardy, Ottawa,
Who reviews Insurance Development

E. D. Hardy, of the Canadian Lumbermen's Insurance Exchange, Ottawa, recently delivered interesting addresses before the Canadian Lumbermen's Convention in St. John, and the Ontario Retail Lumber Dealers' annual meeting in Toronto. The speaker pointed out some interesting facts in regard to fire insurance as applied to sawmills and woodworking plants, emphasizing the advantages of the lumber mutuals and inter-insurers which had a strong record in successful operation and management. He outlined the supervision and management of such companies, the class of risks ensured, the form of contract, the security to policyholders, inspection service, basis of rate and other interesting data.

In the course of his observations he advanced certain arguments of which the following is a brief summary. Mr. Hardy declared that fire insurance as an institution owes its existence to fire waste. Theoretically, fire insurance is the pro rata distribution of losses over all insured property. Practically, fire insurance through the channels of commerce enters into the cost of every commodity we use and affects every individual. Fire waste and insurance cost are, therefore, inseparably bound together and you cannot consider the one without a proper appreciation of the other.

What Fire Insurance Provides

In its simplest form, fire insurance provides a means of relieving individual misfortune through a combined group of individuals and is purely mutual in character. In its commercial aspect it consists in the accumulation of funds to provide against future eventualities by applying the "law of averages" to losses by fire. Thus, a fire which might spell ruin to an individual becomes a trifling matter when the loss is distributed over a large number of individuals. The larger the group the less danger from disaster.

The stability of fire insurance has given safety to the investment of capital in business enterprise. Particularly is this true when you consider that less than five per cent. of the world's business is done on a cash basis. Through the collateral security afforded by fire insurance the wholesaler is enabled to extend credit to the retail dealer, often for several times his available capital. The wholesaler in turn operating on borrowed capital by means of fire insurance is frequently enabled to secure more favorable concessions from the manufacturer. Fire insurance then is now generally recognized as the foundation of credit.

Called by Economists "National Tax"

Being essential to every business enterprise and entering into the cost of every article we buy, fire insurance has been referred to by economists as a "national tax." Therefore, it becomes a matter of personal interest to every individual, but unfortunately the true nature of fire insurance is not always fully understood, which explains much of the public apathy in matters pertaining to fire prevention.

Every fire is an economic loss to the state. If the property is insured there is not only the loss of created value, but also the loss incurred in indemnifying the assured. In 1916, for example, the damage by fire to properties insured in companies licensed by the Dominion Insurance Department amounted to \$15,114,000. To distribute this amount, the companies collected from the citizens of Canada \$27,784,000 or \$12,670,000 more than the loss. In other words, for every dollar of loss distributed \$1.83 cents was collected.

Now since insurance is recognized as a tax the agency through which the tax should be collected at once becomes a matter of public interest. In the case of taxes imposed by governmental authority—the collection of the tax is left in the hands of government officials—

federal, provincial or municipal. But in the case of insurance the collection of the tax is left to private interests—mainly for profit.

Here it is generally conceded that commercialism in insurance first made its appearance in England near the close of the 17th century. Dispensation of aid to fire sufferers prior to that period was largely a matter of voluntary contribution or general assessment. Mutual schemes of insurance proved so successful that private institutions saw a means of divesting profits from participating policyholder to shareholder. At the present time over eighty per cent. of the world's fire insurance business is in the hands of stock companies, whereas insurance in its origin was purely altruistic.

From a direct contribution to a common fund for relieving misfortune, the premium became a source of profit to a third party who guaranteed the payment of losses from accumulated funds.

Instead of a system in which every individual felt a personal interest in preventing fires, there was substituted a system in which the occurrence of fire became a matter of comparative indifference.

The public erroneously came to believe that the insurance companies alone were concerned with fire loss, and the companies having in their power the fixing of the rate of premium were not entirely averse to the occurrence of fires.

The Organization of Lumber Mutuals

The foundation of lumbermen's associations paved the way for the organization of lumber mutuals and inter-insurers. Co-operation is the keystone of their success, and in this connection, Mr. Hardy pointed out that the moral hazard was reduced to a minimum, and the physical hazard improved through inspections. The elimination of the conflagration hazard and the reduction in overhead expense were also features of lumber mutuals.

The benefits to the lumber trade were a better understanding of the principles of insurance; more favorable insurance conditions and lower insurance cost.

The Canadian Lumbermen's Insurance Exchange was then referred to in its origin and plan of operation. The object was to provide indemnity at cost. Mr. Hardy spoke favorably of the results and extended an invitation to the N. B. Association members to become subscribers. In conclusion, he said, in touching upon the basis of rate, that in view of the mutual character of the organization, all accruing profits are placed to the credit of the individual subscribers. The highest rate paid by any member for insurance is taken as the basis for estimating the cost of protection to subscribers pending any departure from the method based on experience.

More Pulp and Paper Mills in Three Rivers

Following a visit to Three Rivers, Que., of executives and officials of the International Paper Company, it is stated on good authority that the big pulp and paper project which it was announced some months ago the company had in contemplation for Three Rivers, is to be put into operation at an early date. As was stated at the time, the plans for the pulp and paper mills call for an expenditure of some \$6,000,000. The scheme involves the development of Les Forges Rapids, on the St. Maurice River, nine miles north of Three Rivers. A monolithic concrete dam, 30 feet high and 1,900 feet long will be built. The foundation will be carried 60 feet below low water level. The power station will be equipped with seven water turbines, each 9,500 h.p. The plans are going forward through the St. Maurice Lumber Company of Three Rivers, of which the president is George F. Underwood, of New York, and the manager R. F. Grant, Three Rivers. The company is a subsidiary of the International Paper Company and was incorporated in 1916 under the laws of Quebec Province, with an authorized capital of \$600,000.

The Ontario Workmen's Compensation Board report for the year 1918 shows that during that period there were 47,848 accidents reported, compared with 36,514 for 1917. The amount of compensation was considerably more, \$3,514,648.47, as against \$2,913,085.81.

August was the month when the most accidents occurred, the number being 5,021. The average number of accidents a day was 158. There were fewer fatal accidents in 1918, only 440, as compared with 454.

The amount paid for medical aid was \$369,347.37, being about 14 per cent. of the amount of compensation.

Western Lumbermen Elect New Officers

W. F. Thorn, of Moose Jaw, Sask., was elected President of the Western Retail Lumbermen's Association, which was held recently in Calgary, it being the twenty-eighth annual gathering. All previous conventions have been held in Winnipeg. There were over three hundred delegates in attendance. W. A. McIlrath, of Radville, Sask., is the retiring president and presided at all the sessions which took place in the Hotel Palliser. Theodore Sparks, of Grand View, Man., was elected vice-president, and there were many inspiring addresses delivered during the three days of the assembly. Numerous subjects of vital importance to the trade were considered and aggressive action taken.

The new Board of Directors is as follows:

Board of Directors, Manitoba—F. E. Frost, Winnipeg—E. Finch, Strachan; J. A. Row, Winnipeg.

Saskatchewan—G. C. Ingram, Moosejaw; A. S. Peterson, Birch Hills; P. Kleckner, Vibank.

Alberta—H. B. Armitage, Camrose; E. E. Sine, Calgary; R. Skov, High River.

Is it probable that the next convention will be held in Moose Jaw. Final decision was left, however, to the Board of Directors, who will meet in July next, in that city.

The financial statement, presented by Secretary-Treasurer F. H. Lamar, of Winnipeg, disclosed the pleasing fact that the Association is in splendid shape financially, and that all its activities are in

W. F. Thorn, Moose Jaw, Sask.,
Newly elected President of the Association

W. A. McIlrath, Radville, Sask.,
The retiring President of the Association

a healthy shape. The membership is now 1,200 and is growing steadily. Although no campaign was carried out in 1918 the list has been increased by seventeen, and since December last eighteen applications have been received. One district meeting was held in Calgary last year, and we visited other portions of the Alberta territory with Mr. Neill, the late secretary. A committee also visited many points in Saskatchewan and Manitoba to consult with members to find out how the service might be improved.

The secretary next referred to the gratifying interest shown by members in the Association plan service. From January 1 to January 11 last there had been 131 sets of plans issued by that branch of the organization, which constituted a record. During the past year over 500 special plans were made up, as well as a great number of stock plans and specifications for all styles of buildings.

Another popular branch of Association service is the issuing of farm catalogues showing many of the newest farm buildings and a number of different types. The printing of this catalogue last year cost \$8,500, but 125,000 had been turned out at a cost to the retailer of three cents apiece, 112,000 being disposed of before the issue was printed. It was hoped to further extend this service during the present year.

Secretary Lamar also referred to the calendar service offered to members, some of whom had already taken advantage of it. All were urged to consult the new department when ready to place orders for the next holiday season. Another good thing offered was the Association training course, covering yard operation, salesmanship, and other branches of the trade. It was an excellent thing for the young, inexperienced retailer, and many were taking advantage of the service.

Going Vigorously After the Export Trade

In a recent debate in the B. C. provincial legislature, Hon. T. D. Pattullo, Minister of Lands, stated that the province was going strongly after foreign trade, and that it would have to fight hard to get the business in export timber. He pointed out the tremendous competition of the producers of the United States and declared that only by fighting hard for it would British Columbia get anything in the way of orders. An export trade was absolutely necessary for the development of the business, which could not be stabilized so long as it depended entirely on the prairie market. The late government had not done what it might have done to provide against strong competition from across the border.

Figures quoted by the minister showed that in 1906 the export trade of the industry had been 6 per cent. of the total. This increased and decreased. In 1915 it jumped to 15 per cent., but fell to 4 per cent. in 1917. No figures were available for the year 1918.

He referred to the reported orders to be placed by Great Britain and was optimistic regarding the prospects of British Columbia. He thought some orders would be placed soon, but owing to the private nature of the correspondence he could disclose but little.

Justifying the aeroplane spruce bill, Mr. Pattullo said spruce production for aeroplanes had increased from 116,000 feet in January, 1917, to 7,000,000 feet per month when the armistice was signed, and this figure surpassed the entire aeroplane spruce production of the United States.

As far as development was concerned in connection with the lands of the province, Hon. Mr. Pattullo said he had not been able to move as rapidly as he wished, but owing to the unsettled condition of affairs due to war it had not been possible to go any faster. He asked the members to bear with the government, assuring them that there would be much bigger results to show at the next session.

Timber Control May Continue for Months

Reviewing the timber trade in Ireland during the past year, J. Forsyth Smith, acting Canadian Trade Commissioner in the United Kingdom, in a recent report to the Department of Trade and Commerce, Ottawa, says:

The year 1918 was a poor one for the trade, with the exception of those firms who were on actual war work. The importation of foreign and colonial woods was entirely for Government account, and consequently very small. In a normal pre-war year there was imported to Belfast from one to one and a half million feet of log timber, and during 1918 only 233,876 arrived. Of deals, battens, and boards, about a similar proportion of pre-war shipments came to hand, and of hardwoods only a few carloads in the shape of dunnage wood. There was quite a movement in native timber in the early part of the year, but later, owing to similar restrictions being imposed by the Controller of Timber Supplies to those applying to imported timber, the movement during the last half of the year was not so brisk; and since the armistice was signed a very great further falling off in the demand is noticeable, as manufacturers are delaying any work they possibly can in the hope that they will be getting supplies of the dry imported stocks. By those of the trade in close touch with the Contraller, it is anticipated that control on the purchase and importation of wood goods will be maintained for at least six months, possibly longer, and in the meantime the trade will have to depend on rations of Government stocks of imported goods and eke out the balance of their requirements with native woods.

Senator McLaren Gets Full Verdict

An item appeared in the daily press recently, which said: "Senator McLaren, of Perth, who sued Col. A. G. Peuchen for \$158,000, alleged to be due on a promissory note, at Osgoode Hall, Toronto, received a verdict for \$50,000 and \$1,250 costs." The main heading stated that the verdict was for \$50,000 and \$1,250 costs, with a subsequent sub-heading to the effect that Senator McLaren, of Perth, had sued Col. A. J. Peuchen for \$158,000. Here are the facts: Senator McLaren sued Col. A. J. Peuchen on a promissory note of \$141,000. He sued for principal and accrued interest. After suits were entered Col. Peuchen paid \$115,000 in cash. The suit reported in the paper in question was an unpaid balance of \$50,000, which the Senator has secured with \$1,250. The suit arose over the sale of certain timber lands in the West.

New Plan to Get Account Paid

A slow-pay customer in a small city recently received the following letter from a credit man of originality:

"Our cashier fell unconscious at his desk this morning. Up to this time, 4 p.m., we have been unable to get a word out of him except your name. May we say to him, with a view of promoting his immediate recovery, that we have your check, as we think that is what is on his mind?"

The Future of the Retail Lumber Merchant

How He Must Not Only Be the Material but the Building Specialist in His Community—The Necessity of Furnishing Plans

A retail lumber dealer not properly equipped to serve his trade with plans to show the various buildings and building additions into which he desires to, or is able to convert his stock of building material, is somewhat like unto a ship without a rudder, but very much more like unto a tailor without patterns, says J. C. Dionne, in the "Lumber Co-operator."

We have absolutely no respect whatever for the retail lumber dealer who, with the opportunities that have been offered him, has failed to equip himself to serve his trade by furnishing them with the ideas as well as the material, for building.

We would like to see the building trade of the entire country educated by direct advertising to the consumer, to such a point that they would as decidedly refuse to buy building material from the man not equipped as a building tailor, as they would to buy clothing material from the would-be tailor who had no patterns or building ideas for the making of their clothes.

The wagon yard is a relic of the past. The sooner it passes out of existence, the better. The salvation of the building business depends on whether or not the professional builders are going to keep up with the times, and furnish such service to the trade as other lines of industry are furnishing.

The retail lumber dealer who deserves to survive and prosper, is he who desires, aspires, and perspires to make himself the building authority of his territory, who equips himself and then labors intelligently and ambitiously to be, not only the material merchant, but the architect, contractor, builder, and building specialist in that entire neck of the woods.

Back to the tall and uncut timbers with the man who believes that a retail lumber yard should be a drab and dreary looking storehouse of ill-kept building materials in some God-forsaken part of the town; who believes that it is his job to keep his stock of materials assorted and balanced and be prepared to serve it out to such people as happen to decide that they need lumber, and then drive up after it; who uses neither brains, energy, salesmanship, publicity, or any of the other powerful assets in his business that God gave him for his right hand bowers.

A Bigger and Better Field at Hand

The real retail lumber dealer is too big a fellow for that kind of a job. Instead of being a leech on the body social, he desires to be some pumpkins locally. He casts about him to see what he may do to improve his business. And the first thing he discovers is that the live and ambitious retail lumber dealers who are making a howling success of their affairs, are those who have realized that the old-time wagon yard has served its time, and that a bigger and better field has spread itself before the eyes of the professional building man.

The ambitious, up-to-date retail lumberman of the future has a field that he is, and has every right to be, proud of. He runs an attractive building store. He locates it with other attractive business houses, and he strives to make the home building store as attractive to the observer and the visitor, as the stores in which other, and much less precious commodities, are sold. He equips himself with plans, pictures, ideas, and suggestions, so that he can show his prospective customer what he has to sell in the line of buildings—not lumber. He realizes that the public is not interested in lumber, as a raw material, but is absolutely wild about lumber in its finished condition, in the shape of well built, well appointed, well painted and finished homes, barns, garages, fences, interior home improvements, etc.

He goes about his home town as the missionary goes about the land of the heathen—preaching, preaching, and teaching, the better uses of lumber.

The poorest argument that we have heard against the idea of having the retail lumbermen equip themselves with plan book systems, and with plans and pictures generally, for helping interest their trade in building, is the argument that—"Our trade does not build that kind of houses."

Of course they don't. That is exactly why the dealer needs the plan books. He needs to educate his trade, to devise ways and means for improving the taste of his trade, and incidentally the architecture of the residence districts of his community.

Certainly a dealer does not need plan books and modern building ideas, if all he is inclined to do is to continue to sell his trade the kind of homes that they have been in the habit of buying. But

the modern retailer of lumber is becoming a building specialist. He is looking about him, discovering and listing the building needs and shortcomings of his neighborhood, and then getting busy to remedy the situation. When he remedies the situation by interesting his town in a better class of homes, and in improving their old homes to make them more really homelike, he of course is going to improve his own business at the same time, as it is right and just that he should.

Even though there were no extra money in it for himself, we do not see how a man with ambition could sit supinely still, and continue to help the people of his town build square cornered, narrow porched, small windowed, box-carhouses, such as they have been building for the past generation. His professional pride ought to be enough to incite him to great efforts to show his trade the difference between houses and homes.

Becoming the Centre of Ideas

The reason why thousands of live retail lumbermen in the United States during the past two years have bought plan book systems and put them to work, is because wideawake dealers have realized in advance that these modern plans are what their trade did want, even though that trade did not quite know it, and had to be awakened to the fact.

The building trade will respect the dealer who introduced new and interesting ideas in the building line in his territory. They learn to respect the tailor who keeps up with the fashions, the milliner who knows and sells the latest styles in hats, the dentist who keeps in touch with the newest discoveries for decorating the teeth, the doctor who keeps up with the march of progress in medicine, and the lawyer whose mind takes account of decisions of legal interest to his clients.

Is it then unreasonable, that your townspeople will look to you for building ideas, and will respect your business ability, and subscribe to your business ideas, when they find that you are keeping up with the march of progress.

There are styles and seasons in building, just as there are in wearing apparel. You can't, you mustn't expect your trade to do the building thinking, dig up the new building ideas for the community. They expect you to do so, and as you live up to their expectation, so shall you prosper.

A man without a plan, is a man without an aim; and a man without an aim is rarely successful. A retailer without plans is far worse off than an ordinary man without definite living plans, because plans and ideas are what the building trade must look for from him.

Your customer, when his shoe supply gets low, goes to the local shoe store, and buys a completed, fitted, guaranteed, ready-to-wear pair of shoes. He buys a hat that is ready made, fitted to his head, and which he has admired in the glass on his cranium. He buys a suit of clothes fitted and ready for wear. He buys other commodities the same way. He gets service from these dealers.

The Sort of Service Required

But how about a home? How about a sleeping porch, how about a built-in buffet, or a score of other things made from building material?

Does he get that sort of service? If he does, he's mighty lucky, for there are few towns where he can, even now.

But he should be able to get that same service, anywhere. It is wrong, dead wrong, for the prospective purchaser of a building to have to go to an architect for a plan, a dealer for material, a paint store for paint, a hardware store for hardware, and have to do business with carpenters, painters, roofers, tinsmiths, etc., if he wants an addition to his home.

It is the dealer's job to furnish him the delivered building or addition, save him the trouble of doing anything but O.K. the plans and sign an order.

And when the day comes when the citizen of this and every other town of the land—and that day is coming just as sure as God made little green apples—knows just where he can go for a new home, or barn, or porch, or any other item of completed building, just the same as he can go get a pair of shoes or a suit of clothes—when that day comes, and not until then, the retail lumber business will come into its own.

And take it from us, when that day arrives, he will buy his finished buildings in an attractive, well lighted, plate glass front.

Elimination of Free Delivery Service

It Enables Deliveries to be Made More Promptly and Causes Greater Care in Ordering Supplies

To charge for deliveries of material or not to charge is the question which has been discussed a number of times by retail lumbermen. The consensus of opinion, in the larger centres especially, is that the service should be paid for and not included in the price of the material sold to a customer in the yard. It requires a good deal of money to keep up horses, wagons, stables, motor trucks, drivers, etc. The expense of maintenance is increasing, rather than diminishing.

It is interesting to learn how the other fellow views matters and the following expression of opinion from M. D. Greene, of Auburn, N. Y., in the "Lumber Co-operator," seems to hit the nail on the head and leave little room for argument.

"Up to August, 1912, we carted lumber free within the city limits and even in nearby adjacent territory. We found that people were riding the free horse unreasonably. They would frequently ask us to make two or three deliveries when a little fore-thought would have enabled the whole delivery to be made at one time; lumber which they could easily have handled themselves they would not take because we were delivering free, but would compel us to deliver it.

"We finally talked the matter over among ourselves and agreed to make a charge of twenty-five cents for each and every delivery, to which we have adhered ever since. It stirred up considerable friction at the time, but by standing our ground, it has become a thoroughly established trade custom. We find that it reduces the number of deliveries very materially. There is more care used in ordering and getting all the items required together. In many instances people will arrange to take the lumber from our yard themselves. We think that because of our cartage charge, we are to-day easily saving the equivalent of one man with one horse and wagon in addition to the money collected. The saving effected in wages, investment, feed, etc., amounts to considerably more every year than the amount of money we collect. Because of the elimination of many deliveries, we are able to serve our customers more promptly than before. We would not for an instant, think of going back to the free delivery system.

"There has been some talk of increasing the price of our delivery charge because of the increased cost of doing business, but we have come to no agreement on the subject. We have not adjusted this cartage charge with the idea of making a source of profit so much as to eliminate needless work. We are in business to serve the people and think this system of doing business enables us to do so more promptly and satisfactorily."

The Victory of the Cant Hook

By J. L. Love

The Canadian Forestry Corps! A name wrapped in the whisperings of tall trees, the silences of deep forests, the isolation of great distances, the pantings of hard labor. A unit that has strode to victory through strange channels—an invisible force borne of the straits of war, that helped to defeat the submarine with no weapon but its industry, but that spelled its doom more surely than a fleet of ships—that even built those ships.

A great silent engine of war inextricably woven into the fabric of Britain's wooden walls—into every trench and dugout and tunnel, into the huts that house the army, into the mines that backed the Allies, into the railways that fed the front, into the aeroplanes that brought a new element into the struggle, into the sinews of commerce that needs must carry on, into the boardings that talked to us from the walls.

The very wheels of war, turned from a Forestry Corps mill, ran on a Forestry Corps road. The eyes of war, its fists and muscles, its legs and arms, once slide down the timber shoot of a mill working in the heart of a forest that had stood unmarked by man for centuries.

There is something strikingly dramatic when you look at it that way. And that is the right way to sum up the work of the Canadian Forestry Corps. The germ of it started with the struggle on the seas, the threat to Britain's supremacy in her peculiar element. It is not the product of war so much as of illegal war. Perhaps its record has been the more grateful for that. It is the flash of thought that evolved the solution of the world's greatest peril in history. Without a special organization of foresters Victory would have been spelled with a small "v," because the other fellow would have had it. There would have been no ships to carry the food. The submarine that strove to gird the shores of Old Albion in chains of steel has to its credit the evolution in England of a small weapon that has struck it down—the cant hook. The U-boat did a fine thing for the Empire when it added another jewel to Canada's crown of glory in this war in the shape of a corps of lumbermen. It never did a grander thing

for Victory than to open the eyes of Great Britain to the resources lying untouched within its borders.

The story of the inception of the Canadian Forestry Corps is not new; but there is nothing old about the way the corps has gone about its duties ever since. The body of men who produced sawn lumber in England in a week less than three months from the time the call came to Canada has gone on to bigger things with each month. An organization little larger than a division of soldiers has enabled the whole Allied Army to fight on without worrying about one of its most vital supplies. A hundred camps of Canadian foresters in Great Britain and France have stood for more than two years and a half between the fighting men and starvation, between an army unconquerable in battle and defeat.

This corps of 30,000 men has saved each month a trip of sixty-five lumber schooners. It has left free for other purposes enough ships to feed a third of the population of Great Britain. Seize that and even the laymen may realize what the Canadian cant-hook has brought across the ocean.

To accomplish all this meant organization and hard work. The organization must have been satisfactory, not only from results, but because the Americans have adopted its system in the formation of a similar unit for war purposes. That is where the special sphere of General McDougall and his assistants comes in. Incidentally the Americans also adopted the implements used by the Corps. When a rush order went out from the War Office for a large amount of material by a certain time, the Canadians, ignoring holidays and regular hours, produced themselves 85 per cent. of the total ten days ahead of the time set. And the Secretary of State for War did not hesitate to acknowledge it.

The Canadian foresters came across with no thought but production. They brought their home training and muscle, their home methods, their home implements. They put all strength and ability to Al production. Later the exigencies of war lowered the physical calibre of the men—a large percentage wear wound stripes, many several—without serious effects on the production. They brought so much of Canada to the job that what was left in the land of the Maple Leaf could show a record of only three times as great production. Their special timber tool, the cant hook, has become Britain's lesson in the handling of timber. The Forestry Corps has to its credit a direction of machinery to the saving of man-power unique even in a war of machinery. What three men have done can be done better by one man and a machine. And it saves food and men. The Corps showed something of the possibilities of lumber production. One of its mills turns out in one day as much as the ordinary Scotch mill does in ten. That explains the standard compliment of certain parts of Great Britain "that every Canadian is born to the axe"—and the record of the Canadian Forestry Corps inclines no one to deny it.

Not satisfied with solving the submarine question by—stemming the flow of British timber to France and almost all the importations from abroad, it set out to make itself independent. It branched into farming—it even added pig raising—and now it does not even trouble to read the Food Controller's regulations or price lists in vegetables. Looking about, it saw another sphere it believed it could fill with profit to the country. It took in hand the construction of aerodromes, clearing the site, draining, levelling, grading—everything, in fact, but the erection of the hangars.

There are those who hint that had the war continued much longer the War Cabinet would have been made of the timber of the Canadian Forestry Corps.

It Pays to Take Care of Farm Machinery

Farm machinery represents a financial investment, and here are a few facts of the retail lumber dealer to drum home with his rural customers. Taking proper care of it results in a monetary gain: leaving it exposed in the open at all seasons of the year must mean economic loss, not only to the farmer but to the whole country. It is generally recognized by authorities on agriculture that, if exposed in all sorts of weather, farm machines depreciate more than they do from fair wear and tear. That is to say, the farmer, who is careless in this respect pays for more than twice the number of implements than he actually requires. At the same time great manufacturing plants and small armies of workmen have to be kept busy replacing these losses, which, in thousands of instances, are purely and simply the result of carelessness and neglect.

To house implements properly, it may not be necessary to have a special implement shed. Many farmers can utilize an unused barn floor, or a part of some other building. Poultry or other live stock should never be allowed access to the building, or part of a building that has been set aside for machinery. On most farms, however, a special implement house is desirable. A suitable building, if carefully planned to conserve space, can be built at a reasonable cost. Plans can be obtained from the Central Experimental Farm at Ottawa.

Start Day Wage Scheme in the Woods

One Leading Company Declares That It Will Take This Step Next Season—Advantages of Plan

James Ludgate of Parry Sound, Ont., who is manager of the Schroeder Mills & Timber Company, with headquarters at Pakesley, Ont., and has been in poor health for the past few weeks, is now steadily improving. This will be good news to his many friends. Mr. Ludgate was able to make a trip to the camps this week.

In speaking of conditions to the "Canada Lumberman," he said: "I do not think that the cost in getting out timber this year will exceed last year's figures by more than 10 per cent."

"While wages and supplies have been higher this season, yet it has been a much better one since December 1st. Before that time, however, weather conditions, coupled with "flu," high wages and scarcity of labor, made it the worst fall I ever saw in this section. I want to say right here that next fall we are going in for the day wage scheme, whether other operators do or not. This thing of paying men for twenty-six days' work when they only do thirteen, is about played out. Make the wages high enough so that the men will not be the losers and still it will be better for the employer, because he will have hands anxious to stay out and put in time. There will be no fellows jumping because the foreman called them down for coming in when they saw a black cloud looming up."

"The operator who was late starting last fall was lucky, as labor loosened up about December 1st, and the weather also improved. We did not commence our sleigh haul until January 15th, and later in some camps, and now, out of seven camps, five are caught up and the other two will be this week. The snow is so light and conditions are so good that we are cutting again. I think we should be able to get one million feet or better each week and with the twenty million feet we have already this will give us a fair cut."

"I do not see much chance of costs decreasing. I think employers will make a mistake if they try to reduce wages. In the first place, let them keep wages up so that the returned soldier may get a share of what the foreigner and slacker got while he was away fighting for us. It really does not make any difference to the operator whether he pays \$2.00 per day or \$5.00. He has to have his profit, and as long as some one else does not get his labor cheaper and undersell him, what is the difference. There is too much of this trying to undersell the other fellow."

Canadian Trade Commissioners to Visit Canada

Arrangements have been made for the return of a number of Trade Commissioners to Canada this year for the purpose of renewing their acquaintances with industrial concerns and industrial conditions especially. The officers of the Department who have been instructed to return and the approximate dates of their arrivals at Canadian seaports, are as follows: J. W. Ross, Shanghai, March 15; B. S. Webb, Buenos Aires, April 15th; D. H. Ross, Melbourne, May 15; Harrison Watson, London, June 15; W. A. Beddoe, Auckland, July 15; J. E. Ray, Manchester, August 15; W. J. Egan, Cape Town, September 15.

In addition to this, Trade Commissioner H. H. Pousette and G. B. Johnson, late Trade Commissioners at Buenos Aires, and Yokohama, respectively, who have been overseas since the outbreak of the war, will be released at no distant date and will return to Canada for the purpose of visiting manufacturers and others, preliminary to their taking up some foreign post.

Price Bros. are Expanding in Paper Line

A fifth paper machine, it is said, is about to be ordered by Price Bros. & Co., of Québec, who have pulp and paper mills at Kenogami and Jouquiére. It will probably be of smaller make and type to those already installed.

But one paper mill in Canada has more than four machines. Price Bros. have four 156-in. machines with a capacity of 220 tons; and the Abitibi Power and Paper Company have four machines of various widths, making 225 tons of news. The Spanish River mills at the Soo have four machines, making 220 tons. J. R. Booth has three Fourdriniers and a board machine, while E. B. Eddy Co. hold the record in number of machines in operation with one Harper and three regular Fourdriniers and two cylinder machines with a capacity of 200 tons.

Largest Exporter of Sulphite to Japan

For the past two years Canada has held first place as an exporter of wood pulp to Japan, in spite of export restrictions and shortage of shipping space. Japan's requirements for pulp amount to 100,000 tons, and although that country is increasing the capacity of its mills, it is estimated that only 55,000 tons will be produced in Japan this year, leaving 45,000 tons as the maximum amount which Canada can sup-

ply. Sweden dominated the Japanese market for pulp up until the close of 1916, but authoritative opinion in Japan does not consider that this exporter can oust Canada from first place, and it is doubted whether Sweden can compete with Canadian and Japanese sulphite pulp in the Oriental market.

Lieut. Scott Waldie Dies of Pneumonia

The many friends of Lieut. Walter Scott Waldie, who was a director of the Victoria Harbor Lumber Company, Limited, whose mill is at Victoria Harbor, Ont., and was manager of sales for this organization, previous to his enlistment with the 122nd Muskoka Battalion for overseas service, two years ago, will regret to learn of his death from pneumonia. He passed away at No. 9 General Hospital, Rhyl,

Lieut. W. S. Waldie,
Who died recently of pneumonia

Lieut. C. P. Waldie,
Killed in action at Loos in 1915

Wales, a Canadian demobilization camp where he was awaiting transport for home. He was ill only a few days. Lieut. Waldie, who went abroad as a Major, reverted to the rank of Lieutenant. He was attached to the Canadian Forestry Corps in France and England and then entered the infantry and was pursuing a special training course at Bexhill, when the armistice was signed. He was a son-in-law of Sir Edward Kemp, leaves a wife and three small children, and was forty years of age. A brother, Second Lieut. C. P. Waldie, who was also identified with the Victoria Harbor Lumber Company, lost his life in September, 1915, at Loos, being with the 8th Royal West Surreys (Imperial). He was first reported missing and afterwards killed in action.

Two brothers are left to mourn the loss of the two departed. They are F. N. Waldie and R. S. Waldie, of Toronto, President and Vice-president, respectively, of the Victoria Harbor Lumber Company, to whom the deepest sympathy will be extended by the members of the lumber industry.

Miscellaneous Matters of Much Interest

Messrs. Laurie & Newby, 430 Little Collins Street, Melbourne, publishers of "The Australian Importers' and Exporters' Directory," offer to list in their directory, free of charge, the names of Canadian manufacturers, exporters, etc., desirous of selling their goods in Australia and New Zealand.

The Department of Labor is making a canvass of the employment situation in lumbering and mining industries, with a view to the absorption of the surplus unemployed on the disbandment of the fighting forces. A Dominion-wide system of employment agencies is at the same time being organized.

A million homes are needed in the United States, according to Commissioner Frank J. Pollay of the Division of Building and Construction of the U. S. Labor Bureau, and a plan is now being pushed in Washington to use two billion dollars to aid home builders.

The Spanish River Pulp and Paper Company, as the largest newsprint producer in the country has benefited chiefly by the increase in the price of news print. During the past two years the company has been placing itself in a much stronger position financially. At the close of the current quarter the company will owe 38 per cent. in the deferred dividends.

The twenty-second annual convention of the National Hardwood Lumber Association will be held in Chicago on June 19th and 20th.

The Saving Effectuated by Band Resaws

In these days of economy and conservation anything that will reduce waste and increase production, is worth more than passing consideration. This applies in the wood products line as well as any other. The Mereen-Johnson Machine Company, of Minneapolis, Minn., who specialize in machines for working slabs, edgings and other sawmill waste into lumber, box lumber, lath, etc., in referring to horizontal slab resaws state that they believe a distinct advantage and a big saving on material is effected in using band resaws over the circular type machines. The company state that in manufacturing lath out of slabs and edgings, a test was made with the following

results: From one cord of stock run on a horizontal band resaw: 1,941 No. 1 lath, 538 No. 2 lath, 383 32 in. lath; 2,851 lath per cord.

From one cord of stock run on a bolter system (circular saw): 1,485 No. 1 lath, 200 No. 2 lath, 275 32 in. lath; 1,960 lath per cord.

Figuring on a percentage basis, the saving is about 45 per cent. A still closer analysis reveals a saving of 36 per cent. in saw kerf and the balance is made up out of the slabs fed through the band saw, but which are impossible to feed through the bolter on account of being too thin.

Approximately the same percentage is saved when operating on long lumber and box material. The firm assert that when taken into consideration that the original cost of bringing the logs to the mill is not increased; the cost for labor for operating a slab resaw outfit is comparatively small; and the outfit itself is easily and quickly installed, it is easy to see why a large number of manufacturers have installed an outfit of some kind to get this additional capacity.

Aftermath of the St. John Convention

The recommendation of the Executive Committee that export trade could best be served by a return to pre-war conditions and the decision to have regularly monthly statistical reports compiled are noteworthy. Each manufacturer will send in returns on regular printed forms to the secretary, showing the total amount of lumber cut, amounts on hand, the amount shipped, sold, etc. This will afford the members some valuable and comprehensive data and tend to stabilize manufacturing and marketing conditions. Most of the delegates readily fell in with the idea and the statistical service should prove one of much benefit.

Other important matters was the favoring of the passing of a Bankruptcy Act for the Dominion, and calling upon the railways to furnish copies of all tariffs at the expense of the lumbermen to the trade.

Another move was the decision of the Eastern Spruce Manufacturers to become identified with the Canadian Lumbermen's Association, to be known as the Eastern Spruce Section. The decision to join forces with the Canadian Lumbermen's Association rather than form a separate body was received with much satisfaction.

In regard to the motion that manufacturers be called upon to furnish a monthly statement of lumber on hand, unsold, shipped, etc., Mr. Angus McLean said perhaps accurate returns would not be forthcoming during the first year, but he thought they would be in the second year after the system became more familiar to members. One or two delegates, who are exporters, said they would decline to furnish the information. It was pointed out by Mr. McLean that the information would be of great value to all members and that if they were not willing to co-operate the association was of little value. Under the statutes of Canada every lumberman is now compelled to furnish a statement once a year. The information is given by manufacturers in the southern states and by the hardwood trade in that country.

Why Lumber Prices Have Advanced

Misleading Statements Made by Unthinking Persons Would Lead Public to Form Wrong View

There has been appearing in the press of Toronto and other Ontario cities of late letters and interviews with respect to the alleged high cost of lumber. One writer, in the course of his observation, says:

"Lumber is another article where combines, evading the formality of law, have unreasonably raised prices.

"Why cannot the Government to any necessary extent control lumber like they control electric power? They own vast timber limits, and could establish mills for lumber output, thus ensuring reasonable prices to the consumer."

At a public meeting of a certain party stripe one of the speakers evidently intending to make some political capital, said the "cost of growing the trees had not increased of late years." From this rather ingenious observation he immediately concluded there should be no advance in the price of the finished product. He apparently overlooked the fact that wages, since the war, have, in woods operations, on the drives, and in the mills increased over one hundred per cent., that freight rates have gone up enormously, that camp maintenance and food supplies have ascended from seventy-five to two hundred per cent. that insurance, rent, taxes, overhead, mill equipment, etc., are running into more money all the while. These facts are so patent to any one even remotely connected with the lumber industry that they require no special emphasis or extended explanation. Here is what the speaker said and one can only conclude, after perusing his remarks, that he has been misreported, or that the source from which he obtained his figures must have been a submarine or a cemetery.

"The most of the land is not so important. Compared with the situation two years ago, land is anywhere from twenty-five to 75 per cent. cheaper, and although wages have gone up, that does not matter particularly, and is apparently justified," he went on.

"But take the cost of lumber. The lumber required for the average house is more than half rough lumber, and hemlock is the most used. Now between 1916, and the present time, the price of flour has doubled, but the price of lumber has increased more than 200 per cent. I could buy hemlock at \$19 per thousand, and now the price is \$55, and yet the cost of growing the lumber remains the same.

"Much the same situation is found in cement and gravel. These have also increased very much, and out of all proportion to the cost of producing them," he said.

The speaker said that if means could be found to control the price of building materials, there would be no housing problem.

Writing to the "Canada Lumberman," a leading Toronto wholesaler says: "While I do not think too serious attention should be given to the criticism that has been made by some correspondents and speakers, I want to state positively and pointedly that the contentions raised are very one-sided and misleading. Lumber has advanced less than any other commodity. The increased cost is due largely to the added expense of getting out the commodity and the figures quoted are wide of the mark. In the building of a house only one-third of the cost on the average is for lumber, one third goes for labor and another third for brick and mortar.

"In the year 1916, 2"—No. 1 hemlock bill stuff, sized and delivered, was selling in Toronto around about \$26.00 to \$28.00 per M', depending upon the sizes and quantity ordered. The same article is being sold to-day at from \$43.00 to \$45.00 per M'. The freight rates were increased 25 per cent. in the year 1917, which has added to the cost of all lumber from \$1.00 to \$4.00 per M', depending upon the distance which the shipments have to travel.

"The cost of producing lumber in 1917 and 1918 has been at least one-third more than it was in 1915 and 1916. One thing is certain, that if the prices of lumber are made any lower than they are to-day the lumber men cannot exist. There is no profiteering, and in many instances there is no profit. I will venture the prediction that lumber values generally will gradually increase from year to year, and that the prices ruling to-day will seem low indeed, to what they will be five years hence."

Chas. R. Skene, late of Brandon, has been appointed Saskatchewan representative of the Canadian Western Lumber Company, Ltd., of Fraser Mills, B.C., succeeding E. M. Simonson, of Moose Jaw, Sask., who has joined the staff of the Allen-Stoltz Lumber Company. Mr. Skene has been succeeded at Brandon by Hugh Cameron, late of Alberta, who, along with H. W. Dickie, of Winnipeg, will look after the interests of the Canadian Western Lumber Company in Manitoba.

TIMBER FOR SALE At a Sacrifice Price

Two tracts, containing 213,000 acres, traversed by good rivers to bring the logs down to the Canadian Pacific Railway, on the North Saskatchewan River, at Mountain House in Western Canada; on which there is a very large amount of sawmilling White Spruce and Pine timber, an immense amount of small Spruce, Pulpwood and Boxwood timber. A large modern sawmill and full equipment of woodworking machinery may be bought very cheaply with the timber, as a going concern.

For particulars, maps, estimates and information regarding this large timber proposition, write or telephone to

J. S. MacEWEN, Owner,
c/o Northwestern National Bank,
Minneapolis, Minn. 4-5

Saw Mill Plant For Sale

Practically new and modern Saw Mill Plant, capacity about 30 Million feet per annum, located in the Interior of British Columbia on a beautiful inland lake and on the main line of the Grand Trunk Pacific Railway. About 500 Million feet of timber on and adjacent to Lake (about 90% Spruce) and another Billion feet available at reasonable prices. Natural conditions ideal for economical logging, manufacturing, piling and shipping. An advantage of about \$4 per thousand feet in freight rates to the Prairie Provinces over Coast shipments. This property offers unlimited possibilities as a lumber, pulp and paper property. Would consider selling a half interest. Terms reasonable.

A. C. FROST COMPANY,
134 South LaSalle Street,
Chicago, Ill. 5-t.f.

MILL AND LIMITS FOR SALE in New Ontario.

Would sell outright or half interest. Excellent opportunity for a lumberman. Reason for selling, short of capital. A fortune awaiting the right man.

Address, J. ———
Apartment 3 A,
578 Dorchester St. W.,
Montreal, Que. 2-t.f.

For Sale

Building and Machinery of good Double Cut Band Sawmill, well equipped with steam feed, canter, loaders, etc.

If you want a good mill, address Box 762, Canada Lumberman, Toronto, Ont. 15-t.f.

For Sale—A Real Bargain

Tract 10,000 acres near the Soo, in Pennefather Township, Ont. Consisting of 60 million feet of hardwood timber, 50% Birch of fine quality, 20% Maple, 10% Cedar, 10% Spruce, 10% White Pine and Hemlock. At low price and on easy terms. Property in fee.

Address Alex. Greig,
502 MacKinnon Bldg.,
Toronto, Ont. 5-8

SPLENDID TIMBER LIMITS FOR SALE

One parcel consisting of 41 claims in British Columbia, containing 690,403,000 feet of mixed Douglas Fir, Red Cedar, Spruce, Yellow Cedar and Hemlock. Over 40 square miles. 26,092 acres. Quantity of each kind of timber will be given on application. Splendid property, one of the finest in the Dominion. Timber for sale only, subject to Government license. Price \$650,000. Liberal terms of payment. Will take Victory Bonds up to half or three-quarters of the amount. This timber will be sold subject to inspection. Must be sold within the next three weeks.

Also other smaller properties for sale in Canada.

Address S. G. Read & Son, Limited, 129 Colborne Street, Brantford, Ontario, exclusive agents. 4-5

Saw Mill For Sale

Saw Mill on Masset Inlet, B.C., in Sitka Spruce Belt and extensive tract of standing timber.

Circular Saw Mill—fully equipped—ready for immediate operation.

Capacity—40,000 feet.

Equipment includes logging engine and machinery.

Fully equipped planing mill in connection with plant.

Mill covers 8 acres—property includes fully equipped bunk and cook houses, etc. Plant electrically lighted throughout.

Wharfage facilities provided for export shipment.

Offer includes 120,000,000 feet fine Spruce, Cedar and Hemlock—located tributary to mill.

An unexcelled opportunity for handling box or export business.

Address all enquiries to Box 421, Canada Lumberman, 212 Winch Building, Vancouver, B.C. 5

Miscellaneous

In order to close Estate in Town of 3,000 population in Province of Quebec on G.T.R., Factory now making Sash and Doors, House Trim, etc., 125 Horse Water Power, Dry Kilns, etc., is for sale or would consider organizing stock company with party having some capital capable of managing the business, or plant could easily be converted into Handle and Woodware factory. Unlimited supply of birch, maple, and beech lumber in vicinity. Party with capital thoroughly understanding the manufacturing and marketing of these lines would be offered an attractive proposition.

Interested parties address Box No. 844, Canada Lumberman, Toronto, Ont. 2-7

Can Furnish Four Hundred Wooden Ships Yearly

Representatives from the Pacific Coast informed the Senate Commerce Committee recently at Washington that the states of Oregon and Washington could provide between 400 and 500 wooden ships a year if the Emergency Fleet Corporation would furnish to the lumbermen a standardized programme. Fears of the Shipping Board that the lumber supply in the Northwest is inadequate were declared unfounded. H. B. Van Duser, of Portland, Ore., declared the mills in the state had not reached their maxi-

mum capacity and said production of wooden ships on the west coast could be accelerated. The car situation in that state, he said, was bad, and he knew of several mills that would be compelled to close unless conditions improved.

The Latest Definition of a "Promoter"

A grave and careful old business man had dropped his guard for a minute, and let a fellow get into him quite some, before he surrounded himself with caution, and he said: "By the way, what is your business?" and the chap said, "I am a promoter." The old gentleman added, "In order that we may understand each other, will you tell me what a promoter is?" The fellow replied: "A promoter is one damn fool trying to sell nothing for something, to another damn fool, who wants to buy something for nothing."

Review of Current Trade Conditions

Ontario and the East

There is still dullness prevailing in the market situation and no radical changes have occurred within the past two weeks. Some wholesalers report that business is picking up, while others declare there is no outward evidence of any revival of conditions. There are a few more inquiries and prices on the whole are holding firm, except in a few isolated cases, where there has been a strong desire to clear out certain stocks which the holders find too expensive to retain. The majority believe that their lumber is worth just as much today as ever and are not fearful of the future. They do not intend to sacrifice it in view of the shortened production which will result this season and the augmented requisitions from abroad. With the approach of March many building plans get under way and housing schemes are receiving further encouragement. Retail dealers expect a fair year's business and some encouraging reports are coming to hand. In certain centres the outlook is particularly good. Matters do not definitely shape up generally until well into March, and it will not be ascertained yet awhile what strength the present movement will develop.

The demand for southern soft and hardwoods is limited and there is not a great deal of shipping going forward to United States points. With the exception of maple and birch mill culls, which have dropped some in price owing to the shell box business being at an end, prices are holding firm. It is reported that some Michigan and Wisconsin hardwood is being offered in Ontario at attractive rates, but so far no serious inroads are being made upon the local trade. Implement and furniture factories, piano companies and gramophone organizations, as well as wagon works and automobile concerns, are buying a little more freely, and it is hoped there will be further orders placed from this on. The period of reconstruction cannot be ended in a few weeks, and naturally all eyes are being turned to export business. At the time of writing although no definite assurance has come to hand of large British orders being placed this is not regarded as an unfavorable omen. The restrictions in the Old Land are gradually being removed, and those regulations affecting the importation of hardwoods have already been lifted. It is expected a similar course will shortly follow with respect to spruce and pine. No word has yet been received by the Canadian Lumbermen's Association with regard to export trade with the United Kingdom, France and Belgium, but it may arrive any time now. Developments are, it is understood, proceeding.

Shipments of spruce deals from the lower provinces are going forth and stocks are being reduced as fast as transportation facilities permit. It is interesting to note that some Ontario firms are preparing to ship large consignments of lumber across the water and the necessary licenses have been obtained by the English importers. One concern is sending forward fifteen cars of three-inch white pine deals and one and one-half and two-inch white pine shipping culls or about 300,000 feet in all. This is the first shipment made by them in a commercial way in the past two years. Another company is sending over a similar amount of red pine deals. As soon as ocean tonnage opens up, other large cargoes will be transported. There is a fair requisition for western stock and shingles have recently taken a jump of twenty-five cents. The demand for them is considerably better than it has been for some time. Logging operations are proceeding fairly well in the woods and at some points there is sufficient snow to do the hauling, while the streams have frozen over. There is not as much complaint heard on this score as one would believe, with the mild weather prevailing in the southern part of Ontario. Help for the woods is plentiful and while the cut has been materially lessened from last year, the logs will, with cold weather from this out, be gotten to the banks of the streams in good shape. It is true many difficulties have had to be overcome and the outbreak of influenza gave operations a decided set-back, but all things being taken into account, there will be a fair season's cut.

The "Canada Lumberman" will, in its next issue, present some interesting statistics with respect to last season's cut of lumber, shingles and lath. While there has been quite a falling off, still, taking into consideration the war situation and the shortage of help in the mills and on the drives, the showing is not as unfavorable as many would be lead from hearsay accounts to believe.

Great Britain

Trading has not expanded since last reporting, and the prospects of increased activity are not encouraging until a more settled situation emerges. Unfortunately, labor troubles are introducing fresh

complications and postponing the good time that is coming. A definite movement by the Controller in the price direction is, however, a necessary first step to promote better conditions. With the meeting of Parliament, interest in the housing scheme has quickened. Recent labor unrest has also brought this question to the front, so that publication of the governmental proposals may be expected shortly.

No fresh light has been thrown on future trading with Canada in wood goods. Until prices of Swedish goods are adjusted it will not be possible to estimate the importing outlook with much accuracy. That information when forthcoming will, however, clear the atmosphere. Spruce shipments are even now coming forward with regularity, but the import is only a tithe of what formerly came in, and a large increase in the coming shipping season is desirable from more than one point of view.

The announcement of the elimination of government control in the imported hardwood trade on March 1 has set softwood importers wondering if this is the beginning of the end of the government control over all timber importing, says "The Timber News." There are strong reasons for expecting such to be the case, subject, perhaps, to certain restrictions necessary in view of the government being impelled to safeguard the interests of their housing scheme. This view is in the nature of surmise, however, and is not based on any information except the knowledge that the authorities wish to end the control system, and will take advantage of the first opportunity to do so.

The plywood market is still in a more or less dormant condition, though it is quite possible that business will wake up considerably a little later on. As time goes on there is bound to be a very fair demand for the wood, especially among furniture manufacturers, who have got a lot of leeway to make up. There is no doubt a growing demand also springing up in the boxmaking trade, which should eat up a fair amount of the plywood stocks in this country. It is necessary, however, to get cheaper freights for this wood. As things are at present the freight represents almost the value of the wood in years gone by, though prices will never again return to the level of those days. Everything in connection with the wood and its manufacture is very much dearer now, and will continue so. Labor, machinery, cost of the raw material, forwarding charges, insurance, and, in fact, everything has advanced so considerably that to expect any very big concession in prices would be unwise.

It is officially announced that the agents for the supply of pitwood to the Admiralty collieries will now invoice pitwood to those collieries from now on at a price of 60s. per ton as compared with the controlled maximum price of 65s. per ton ex ship. This step has been taken mainly as the result of the fall in freight rates and in the cost of insurance. Since the armistice there has been a drop of about 4s. per ton in the regulated homeward rates from Bordeaux or Bayonne, while the cost of the war risks insurance which three months ago amounted to about 3s. 9d. per ton has fallen to about 2d. per ton. The Admiralty syndicate buy the bulk, if not the whole, of their imported supplies direct from the foresters, and, aided by the Ministry of Shipping in the supply of tonnage and by other favorable conditions, they can sell at 60s. at a profit; but outside merchants have hitherto been obtaining their restricted supplies under an arrangement which, at the maximum selling price of 65s., leaves them a gross profit of 2s. per ton.

To enable them to revise their prices on a 60s. basis the outside merchants must be given equally favorable conditions to those which govern shipments for the syndicate, says the "South Wales Journal of Commerce," but this equality, it is stated, they have been denied throughout the period of control, and they have not been assured of any improved treatment in the immediate future. In so far as their business is concerned, the whole of the benefit from the fall in freights and insurance has gone to the French exporter, and unless f.o.b. prices on the other side are readjusted it is feared that the past inequalities will be accentuated. A point of considerable interest of the reduction in the Admiralty price is its possible effects on supplies of imported pitwood. At present there is an acute shortage in the supply of pit timber. During the past year the South Wales coal mining industry consumed on an average about 25,000 tons of pitwood per week, and of this 9,000 tons were imported and 16,000 tons supplied from home-grown sources. There is already a falling off in the supply of native timber, and when it is borne in mind that prior to the war practically every stick of timber used in South Wales for timbering purposes was imported from abroad the extent to which at an early date we will again become dependent on foreign sources of supplies can easily be

realized. In such circumstances the reduction in the price of pitwood to collieries is an economic anomaly, and while its immediate effect may be to increase the power of the syndicate as a buyer and shipper in France, its ultimate incidence may be a discouragement to exporters in Spain and Portugal, whence it is imperative we should resume with the least possible delay if the dangers of a shortage are not to be aggravated.

United States

The demand for lumber during the past fortnight both at wholesale and retail has been limited, and the trade does not look for any substantial resumption of purchases or sales either in retail or consuming lines for the next month or so. Prices are holding firm at wholesale, but some complaint is heard in retail circles in the matter of concessions. Of course, the volume of spring business will depend very largely upon the building situation, but it is apparent from reports emanating from governmental departments, as well as contracting and building headquarters that plans are being worked out to revive building construction, which should be fruitful of good business for the spring and summer.

The reports from mills are that all have as much business booked as they can take care of and there is no accumulation of stock. Prices continue firm and in some cases there has been an advance over the prices ruling in December.

There will be no decline in the price of building material, according to investigations made by field agents of the Department of Labor. With a postponed building program waiting in America, with a shortage of half a million homes and with all Europe waiting to be restored, the prospect for reduction in the price of building material is slight.

"American building industries will be called upon to furnish tremendous quantities of materials for European construction," says the department. "If no other elements were present to keep up material prices, Europe's demand would prevent any immediate drop in them, according to the opinion of many material manufacturers and contractors. Reduced production during the war in the building materials industries, and the market curtailment—almost suspension—of private building undertakings, have fomented market conditions which do not make for lower prices."

Bolstering up this conclusion, Charles A. Bowen, secretary of the National Lumber Dealers' Association, upon information obtained from five hundred members, asserts the shortage of buildings is almost universal and that the retail branch of the industry does not anticipate any fall in prices for some time. Mr. Bowen says the conditions in the lumber industry suggests the possibility of a raise rather than a decrease.

The hardwood market is becoming firmer and more active, because inquiries are coming in at a more rapid rate, and because they are developing into orders in a manner that is proving quite satisfactory to the trade. The volume of business has been materially larger than during the last of January, while the latter itself showed material increase over the one preceding it. The call is better for oak, ash, popular and gum than for the other items on the hardwood list, but everything is showing more activity and shipments are increasing at a very steady rate. Moreover, the demand appears to be of a cumulative character, in the respect that it is gaining momentum all the time, and decided further expansion is anticipated in the near future. In the meantime, there is no increase of consequence, if any at all, in the quantity of hardwood lumber being produced. The majority of the big mills are working only on partial time.

"Lumber is high now but prices will soon be lower," is the reason the public is giving for postponing building operations. This seems to be the prevailing opinion as the lumber dealers hear it in every section. Comparatively speaking, lumber is not high, and there is little prospect of the price being much reduced even in many months. Statistics show that during the Civil War the price of lumber rose (as did other commodities) to almost twice what it was in 1860, and that it dropped only about twenty per cent. by 1870, when nearly all other commodities resumed their pre-war level.

The Bureau of Labor Statistics, in a recent issue, gives a table of wholesale prices, by groups, of commodities from 1913 to October, 1918, on a basis of 100 per cent. for 1913. According to this table, food prices had gone up to 199 per cent. in October, 1918, clothing to 253 per cent., and building materials—representing the third great human necessity, shelter—were rated at 157 per cent., showing that the latter have not increased in price in anything like the proportion of food and clothing.

Market Correspondence

SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD

Montreal Reports Situation is Growing Better

Although locally trade is dull in Montreal, wholesalers doing business with the United States report a distinct improvement in the situation. Orders are better, and the inquiries are more numerous.

February is generally a dull month, as building has not opened up to any extent, and very few jobs are open for tender. Indications of construction in Montreal and the province, however, are fairly good. For instance, two extensive cold storage warehouses are contemplated; some large apartment houses are planned; a considerable abattoir is to be constructed; two large schools are to be built; besides which there are many houses to be put up. It is too early in the season to say anything definite, but appearances point to more pronounced activity in construction. The reports from provincial centres are encouraging. Three Rivers will likely be a busy spot, with extensions to shipbuilding, pulp and paper plants, and many industrial houses. Then at Quebec, Chicoutimi, Sherbrooke, and Shawinigan Falls a fair amount of work is contemplated.

Wholesalers state that the mills are asking exceedingly stiff prices, and that practically no buying has been done, a waiting policy being the rule.

Reports of sales for export are to hand, the sales being made by Quebec and Lower Province firms at good prices.

Our exports of pulpwood, pulp, and paper are still on the up-grade. For December the total was \$7,235,699, an increase of \$1,325,537, the chief increase being in chemical pulp, ground wood falling away. Pulpwood exports were valued at \$748,364, a gain of \$143,508. For the nine months of the fiscal year the total of the combined exports was \$61,029,200, or \$18,115,292 higher. Pulpwood amounted to \$11,595,228, an increase of \$4,660,609.

Senator Beaubien has approached the Canadian Railway War Board with a view to securing its support for a project calling for the sending of a train containing exhibits advertising Canada, through France, Belgium, Italy and Great Britain.

Call is for Canada to Supply Timber

The official figures of the imports of coniferous woods into Great Britain in 1913, stated in feet B.M., are given. The quantity of soft woods imported during the year prior to the war amounted to six and a quarter billion feet, as follows:

	Feet B.M.
From Russia	3,118,095,600
" Sweden	1,055,650,200
" France	590,598,600
" Canada	538,330,200
" United States	306,810,600
" Norway	274,263,600
" Portugal	189,322,800
" Germany	123,648,600
" Spain	61,813,800
" Other countries, small lots	12,191,400
	<hr/> 6,270,725,400

It is difficult to realize the enormous consumption of soft woods in Great Britain under normal conditions. After four years of war her requirements will obviously be greater than ever. The importation has been cut down during the war and Great Britain has aimed to supply her requirements by cutting her own precious forest areas.

The same thing has happened in France and in Italy, where even the olive orchards have been sacrificed in order to obtain timber necessary for the carrying on of the war. All these countries are today virtually bare of lumber and have exhausted all forest areas.

The principal source of supply has been Finland and Russia, who supplied fifty per cent. of Britain's imports as shown on the table above. Sweden and Norway furnished another twenty per cent. We know that Finland and Russia are hopelessly upset at the present time, owing to revolution, and when order is restored these countries will need large quantities of lumber to restore their own devastated areas. Sweden and Norway will not be able to take care of the

Desserts like this in Camp

Don't you think your men would relish this addition to the menu?

INDIAN PUDDING

A delicious and nourishing dessert, easily prepared. This quantity is sufficient for 18 servings:

6 pints milk 1 cup molasses
 $\frac{3}{4}$ cup cornmeal $2\frac{1}{4}$ teaspoonsful salt
 3 teaspoonsful ginger

Cook milk and meal in a double boiler twenty minutes; add molasses, salt and ginger. Pour into buttered dish and bake two hours in slow oven.

Very nice, you say, but how about getting milk away up here in a lumber camp? That's a difficulty easily overcome by using KLIM. Klim is the solids of fresh pasteurized separated milk, a dry powder that can be shipped anywhere. To get the necessary 6 pints of milk, whip $1\frac{1}{2}$ cups of Klim into 6 pints of water and use as you would fresh liquid milk. To make still further delicious whip an additional quantity of Klim into water and serve with the pudding.

There are any number of choice desserts that can be prepared if you have Klim on hand. Klim has the natural, unchanged flavor of fresh separated milk and can be used wherever such milk is required.

In 10-lb. tins where you get your grocery supplies.

Great War Timber Resources of Great Britain

At a discussion on "Home timber resources and afforestation," some interesting facts and figures relating to the supply of home-grown timber for war purposes were given by Mr. A. P. Long, Divisional Officer of the Board of Trade Timber Supplies and H. M. Inspector of Forestry for Great Britain. He strongly emphasized the importance of forestry to the nation and gave an account of the way in which the Government and the Timber Supplies Committee had met the enormous demands of the military forces from home-grown timbers during the past few years. From January 1916, to October, 1918, the Committee had supplied no less than 99,000,000 cu. ft. and approximately 3,000,000 tons of timber. The counties of Kent, Sussex, and Surrey had during this period produced 11,500,000 cu. ft. During the eight months ending October, 1918, the three counties produced 2,440,000 cu. ft. or rather more than one-fifth of the total output. The aggregate total of timber in England and Wales was 228,000,000 cu. ft., and in Scotland 285,000,000 cu. ft., a grand total for Great Britain of 513,000,000 cu. ft. or about 17,000,000 tons. As a national insurance there should be well organized forests in this country, a fact that was emphasized by Major Courthope, who also said that it was proposed to plant about 2,000,000 acres of new forests, and the country should then be able to produce about two-thirds of the timber required. Afforestation would provide suitable work for discharged soldiers and would also prevent in a large measure the flooding of agricultural land in mountainous districts. Mr. Long also said that the need for afforestation was overwhelming, and he contended that forests properly organized would pay. It was not proposed to take any land suitable for agriculture for the purpose.

England Looking to Canada for Pulp

As an illustration of the attitude of British paper makers towards future trade with Canada the following note from an English trade paper may be read with interest.

"There seems to be every likelihood, with increased shipping facilities imminent, of large and continuous supplies of Canadian and Newfoundland pulp reaching the British market. It is surprising to learn that quotations reaching British paper makers show Canadian pulps to be 15 to 20 per cent. cheaper than the Scandinavian product. The soaring prices of Norwegian and Swedish pulps will naturally stimulate business relations with other sources of supply; again, the spirit of patriotism favors trade with our colonies. In Sweden it is understood that influential banking interests wield a controlling influence on both pulp and paper mills in that country. No one can dispute the right of combination or co-operation on legitimate lines, but when reports gain currency that 'Sweden is out to capture the British paper market' (particularly 'news'), it is not surprising, when faced with comparatively high prices for pulp and undercutting rates for paper, that the English papermaker views with suspicion any movement in Scandinavia dealing with controlled sales or prices. There are mills in Norway and Sweden manufacturing brands of pulp of

established reputation, particularly for the higher grades of writings, but Canadian sulphite for 'news' and printings, and mechanical, are likely to be freely imported into this country in the future."

Fesserton Timber Co. Leases Monteith Mill

The Monteith Pulp and Timber Company, Limited, of which James Thompson, M.L.A., of Havelock, is President, and E. R. Heyland, of Toronto, is secretary-treasurer, have operated a sawmill and roasting plant for the past three years at Monteith, Ont., on the Driftwood River. The company have leased both to the Fesserton Timber Company, Limited, of Toronto, for the coming year, the latter having purchased the cut of the mill for the past two seasons. The plant at Monteith has a sawing capacity of some 30,000 feet daily, principally of spruce, and about one hundred cords of pulpwood are cut up daily in the slasher.

The Monteith Pulp and Timber Company have been purchasing pulpwood in the north for the past few years and in 1918 handled about 20,000 cords. This year Messrs. Thomson and Heyland, both of whom are connected with Toronto Investments, will devote their entire attention to that company and will still purchase pulpwood for shipment to local and United States points. In their operations, however, they will not go beyond North Bay. They expect to handle some ten thousands cords in Old Ontario, and so far this season have shipped about two hundred cars to the Thorold district and points in New York State.

The prices paid are \$8 to \$9.50 for rough and \$13 to \$14 for peeled wood, depending on the location, freight rates and other considerations. The demand for pulpwood at the present time is fair. Many of the larger concerns in Northern Ontario are curtailing their pulpwood operations this season, owing to the unsettled condition of the market generally and the fact that they do not wish to be caught with a large amount on hand and the possibility of the prices falling suddenly.

The market for ground wood pulp and sulphite is quiet at the present time, but is improving somewhat. In the meantime, values are holding firm and the manufacturers expect that stocks which they are piling will soon be taken up when once export is under way. Several thousand tons of sulphite pulp have been shipped to England by Canadian manufacturers since the beginning of 1919, and it is expected there will be a steady gain in the number of requisitions.

Mr. Manbert Presented With Club Bag

A. C. Manbert, of Toronto, who has been appointed representative of the Ontario lumbermen to proceed overseas to Great Britain to conduct a publicity campaign in the interest of the forest products of the province and increasing the market for the same so as to take in certain thickness, widths and grades for which there has not been as large a demand as desired in the past, was not able to get away on February 22 as originally intended, but will sail from St. John, N.B., on his mission on Tuesday, March 4th. The aim and plan of the visit of Mr. Manbert to the Old Country have been referred to at length in these columns and at the recent annual convention of the Canadian Lumbermen's Association, a resolution was adopted endorsing Mr. Manbert and expressing satisfaction that the government of Ontario agreed to his appointment as the nominee of the lumber interests of the province for the promotion of the best interests of the trade abroad. Mr. Manbert was pledged the united support of the Association.

It was felt by the members of the Wholesale Lumber Dealers' Association, Inc., of Toronto, that they could not allow one of their number and a valued member of their Executive to leave without showing him in some tangible way the appreciation and regard in which he is held. Accordingly a deputation from that body, headed by A. E. Clark, Chairman, waited upon Mr. Manbert a few days ago and presented him with a handsome leather club bag. The presentation was made by Mr. Clark in a few appropriate words, in which he conveyed the sentiments of the lumbermen and expressed the hope that the mission of Mr. Manbert would be successful and productive of practical results. The members of the Association had every confidence in him as a live, alert representative of the industry, and wished him every good fortune in his far-reaching and important purpose. Mr. Manbert, who was taken completely by surprise, made a grateful reply and thanked the donors for the many kindnesses and courtesies extended to him and for their co-operation and well wishes. In entering upon the work, which he had in hand, he recognized its important character and would do his utmost to carry out ably and faithfully the undertaking.

Japan now ranks third among the nations of the world in ship-building and fifth in merchant tonnage, according to the fifty-first annual report of the Department of Marine and Fisheries, recently issued.

THE Products of the Copeland Shoepack Co. have a reputation for giving satisfaction, and you will find every pair of shoes you get from us as good as represented. Our prices, you will agree, are reasonable. Take a look through our catalogue. It's yours for the asking.

The COPELAND SHOEPACK CO., MIDLAND
ONTARIO, CANADA

Making a Mill Scale Study of Oak

The government Forest Products Laboratory, at Madison, Wis., has completed the data of a mill scale study of white and red oak at the mill of George C. Brown & Co., Proctor, Ark. The study was made in 1915 by David G. White, and the information procured is especially appropriate now in view of the importance of wood in the war. The figures are three years old, but that is an advantage rather than a drawback, because they deal with normal price and usual times, and not with operations carried on under extraordinary conditions due to war, says the "Hardwood Review."

The study included white oak and red oak; the white oak consisting of 150 logs of overcup and cow oak, the red oak of 133 logs of southern red and Spanish. These logs were sawed into lumber of the following dimensions: 91 per cent. was 1, 1½, and 1½ inch lumber; 4½ per cent. was 2 and 3 inch stock; and 4½ per cent. of cross ties and small timbers.

The lumber was graded according to the rules of both the National Hardwood Lumber Association and the Hardwood Manufacturers' Association. The same lumber was inspected twice, the second time after three months of air seasoning, but two inspections were compared, and the results form part of the report. The first inspection was made on the sorting chains at the mill, the second when the piles were taken down.

The first inspection by the Hardwood Manufacturers' rules gave a total of 110,995 feet; by the National Hardwood Lumber Association, 111,247 feet. The second inspection, which was of the air-dry lumber, gave 107,709 feet by the Manufacturers' rules, and 106,973 feet by the National.

The study was planned with the expectation that it would show a number of things relating to the production and care of lumber, among such being the grades and the proportion of each and their origin in logs of different kinds; the cost of stumpage, logging manufacturing, yarding, and general; the losses due to seasoning, and other causes; changes in value during seasoning; waste due to milling and other causes.

The report by Mr. White presents tables and diagrams which gives details as well as totals of all the topics which are worked out; but in the space which can be here given to this review it is not practicable to quote the tables, but an outline of the principal results is shown.

Summary of Conclusions.

The prices used in the discussion and conclusions follow:

	White oak—	Plain	Quarter sawed
Firsts and seconds	\$45		\$68
No. 1 common	22		36
No. 2 common	12		20
No. 3 common	6		6
No. 4 common	4		4
Red oak—			
Firsts and seconds	46		58
No. 1 common	22		35
No. 2 common	12		20
No. 3 common	6		6
No. 4 common	4		4

Stumpage value of \$5 per 1,000, Doyle scale was placed on both white and red oak.

Logging cost was \$6.01, consisting of \$4.50 for delivering logs to the railroad and \$1.51 for delivery at the mill yard.

Manufacturing cost per 1,000 net lumber tally varies with the sizes of logs, but showing an average of \$1.70.

Yarding cost from the mill to the piles and then from the piles to f. o. b. cars, \$1.49.

General costs, consisting of taxes, depreciation, advertising, insurance, rent and several other items, \$2.64.

Financial expenses, consisting of interest and discount, \$0.65.

The losses in footage during seasoning has been figured out on the percentage basis, and the calculations are complicated, due to the fact that account is taken of green lumber, that which is temporarily air-dry, and the final air-dry; and also to the fact that two rules of inspection are considered. The percentages run differently for white oak and red oak, the former loss running from 1.6 per cent. to 3.3; the red oak loss running from 2.8 to 9 per cent. Changes in value during seasoning were not all loss. In some instances a de-

cided increase was shown. Most of the depreciation in the value of white oak appeared in the lumber cut from defective logs.

The waste in manufacturing logs into lumber, not including shrinkage in seasoning and the edging and trimming after seasoning, averaged for white oak logs 41.7 per cent., and for the red oak 29.9 per cent.

Percentage of Grades.

The percentage of grades for both white and red oak logs, under the inspection of the two associations were as follows:

	H.M.A.	N.H.L.A.
Firsts and seconds	20.9	17.9
No. 1 common	46.9	46.5
No. 2 common	13	16.9
No. 3 common	17.1	18.7
No. 4 common	2.1	...

The footage loss in seasoning, between the green and the temporary dry condition, due to shrinkage and degrading below a recognized grade, was as follows in per cent., according to the grading by the two associations:

	H.M.A.	N.H.L.A.
Red oak	2.8	4.7
White oak	1.6	2.5

The footage loss in seasoning between the green and final dry condition was:

	H.M.A.	N.H.L.A.
Red oak	3.4	5.7
White oak	2.4	3.3

The oak study for the year 1915 shows that the profit per hour for the final air-dry condition was more than for the temporary air-dry condition for all classes of logs, according to inspection rules of both associations.

For all classes of logs, the profit per hour for the lumber inspected, both green and dry, was greater under the rules of the Hardwood Manufacturers' Association than under the National Hardwood Lumber Association, except from the lumber inspected green from the sound red oak butt logs. In that case the difference was very small and was due to the larger amount of firsts and seconds recorded by the National inspector for this one class of logs when inspecting the lumber in the green condition.

The profits per hour for the temporary air-dry condition was less than for the lumber inspected green for all classes of logs, according to the rules of both hardwood associations, except where plain sawed sound oak logs were considered by the National inspector. In this case the inspector recorded a very small per cent. more of No. 2 common and better for the temporary air-dry condition than for the green, which reversed the amount of profit per hour for the temporary air-dry and green condition.

In the majority of cases, for the different classes of logs, the profit per hour was more for the lumber in the first air-dry condition than in the green. This shows the wisdom of maintaining a yard resaw and trimmer, since the profit should be less in every case for the final air-dry condition than for the green, if the edging and trimming have been perfect in the mill, and if the same selling prices are used in computing the profits per hour.

The profit per thousand was greater for the white than for the red oak, because of the higher price of quartered material. The profit per hour, however, was greater for the red oak, because of the increased rate of production in plain sawing.

The milling waste for all white and red oak logs was 35.8 per cent. The waste was 46.7 per cent. and 29.9 per cent, for white and red oak respectively.

Chief Forester M. A. Grainger has sent 4,000 feet of B. C. lumber to England for exhibit and analysis. The Imperial Institute will test a quantity of it to determine how it compares with European woods. A number of ten-foot lengths will be used by the lumber commissioner in his efforts to popularize our product in the European markets.

Maple trees are to be planted on the graves of Canadian soldiers fallen in France and Belgium. For this purpose seedlings have been raised at the Royal Botanic Gardens, London, England, from seeds sent overseas by the Dominion horticulturist, Ottawa.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

F-4 (B. & F.)

"Reliance" Chain

With F-4 (or B. & F.) Attachments; the best thing for Saw Dust and Light Refuse Conveyers. Used also for Lumber Conveyers.

Jeffrey
"Hercules"
Chain

The Jeffrey Square Shank Pin Construction eliminates all rocking motion in the side bar.

Jeffrey Square Shank Pin Construction

The hard smooth steel pins with the square shanks fit into perfectly square holes. The bearing surface is the full width of the pin. We are the originators of this type of chain and have been building and improving it for 25 years.

F-2 Attachment

Jeffrey Detachable Chain

The type most generally used for Chain Drives. With F-2 Attachments to carry flights, Detachable Chains make good saw dust Conveyers.

"Reliance" Malleable Drag Chain

PLEASE NOTE. We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

Laird Bros., of Dresden, who have been in the retail lumber line in Dresden, Ont., for the past thirty-five years, are contemplating retiring in the near future and disposing of their business if they can find a suitable purchaser.

The county of Hastings has appointed a Development Committee to develop the natural and industrial resources of that district. Active committees have been appointed and the chairman of the Timber Committee is C. S. Rollins.

S. H. Arnott of Janetville expired recently when getting out timber, near the village. He fell over dead while working and was found shortly after by one of the other men. Mr. Arnott was 52 years old and leaves a wife and family.

M. & M. A. Deans, Ltd., have been incorporated with head office at Sprucedale, Ont., and capital stock of \$40,000, to carry on business as lumbermen, saw and planing mill operators, manufacturers of lumber, etc. The provisional directors are M. Deans and J. D. Deans.

Thomas McCourt, who has been employed for many years among the leading mills in the Georgian Bay district, and is well known in lumbering circles, has been appointed foreman of the plant of the C.N.R. at Foleyet, Ont., succeeding Thomas Harrison, who intends going to British Columbia. Norman Vanderburg has been placed in charge of woods operations and good began on March 17th.

The forthcoming financial statement of the Abitibi Power & Paper Co. of Iroquois Falls, Ont., is expected to show profits, after operating charges around \$300,000 more than in 1917. In January output of newsprint reached a new high record, being at the rate of 228 tons per day. The output of sulphite pulp is around 130 tons per day. It is stated that the whole of the 1919 production of newsprint has already been sold.

Two million dollars is to be expended in developing and opening up New Ontario, besides improvements in the fire ranging. The T. and N. O. will spend about a million on extensions. It is expected that the Hydro-electric commission estimates will call for another nine millions, as the Chippawa extension scheme will be carried on, as well as development at Nepigon, High Falls and other places. The Government, besides doing what is possible itself to supply a market for labor, will use every effort to stimulate and assist private industrial concerns.

The cold snap about the middle of February, when the thermometer dropped to 20 below zero at the lowest point, has sealed over Parry Sound and stiffened up the ice on the small lakes and the roads through swamps, so that lumbering is going ahead with a rush, and all over the district the roads and lumber roads are lined with teams drawing saw logs "to water," as they say when they dump them on the lakes awaiting the spring drives. The winter of 1877-78 was so mild that no ice formed on Parry Sound, and navigation progress has been made in getting out next season's cut.

Eastern Canada

Ed. Niblock, of Sutton, Que., tapped maple trees last week. This is a record for Quebec, for usually the sap only runs about the middle of March.

Price Bros. & Co. intend erecting a new ground wood pulp plant of ninety tons daily capacity at Jonquiere, and construction will be proceeded with in the spring.

The Riordon Pulp & Paper Co. Ltd., 355 Beaver Hall Square, Montreal, P.Q., are erecting a sulphite pulp mill at Lake Temiskaming, Ont. The new mill will have 30,000 ton capacity and will be in operation by December, 1919.

Announcement that International Paper Co. will build large pulp mill at Three Rivers is taken to reflect new business for Shawinigan Power Co., which controls the power situation in that district. Power requirements of the new mill are estimated at 10,000 h.p.

A federal charter has been granted to Canadian Kraft, Limited, with head offices in Montreal and a capital stock of \$10,000 to import, export, manufacture, sell and deal in paper, and paper and wood products of all kinds. The incorporators are F. B. Common, F. G. Bush, Geo. R. Drennan, H. W. Jackson and M. J. O'Brien, all of Montreal.

Fire in the warehouse of the Nashwaak Pulp & Paper Company, Fairville, recently, destroyed the warehouse and contents, consisting of a stock of broomcorn, owned by T. S. Simms & Company, Limited, and valued at \$10,000. The damage to the warehouse is in the vicinity of \$25,000. The loss on both the warehouse and stock is covered by insurance.

The surplus shell boxes are to be distributed to the poor for firewood in the various cities and towns in which the boxes are located. The Imperial Munitions Board has decided on this method of disposing of these boxes, it being understood that they are not to be sold. In Montreal 32,000 boxes are to be distributed through three societies.

E. Lagueux & Fils, Limitee, has been incorporated with head office at Tring Junction in Beauce County, P.Q., and capital stock of \$250,000, to

carry on lumbering operations; purchase and sell pulpwood and firewood, manufacture and deal in lumber and timber of every kind; also to purchase any timber cuts and land necessary for the purpose of constructing booms, etc. Among those interested are E. Lagueux, J. T. Lagueux, N. Lagueux, P. Lagueux, and J. A. Lagueux, all of Tring Junction.

The plans of the International Paper Company, N.Y., (with which is allied the St. Maurice Lumber Company, Three Rivers, P.Q.,) for newsprint and pulp mills and the development of the Rapides des Froges, Three Rivers, are completed. The mills, it is understood, will be built on land near the site of the present sawmill. The scheme is a very extensive one and will, if fully carried out, involve the expenditure of about 13 million dollars.

The annual general meeting of the Wayagamack Pulp & Paper Co., Ltd., was held recently, and the following were elected directors of the company: C. H. Duggan, Alex. MacIarne, Hugh Mackey, K.C., Jas. W. Pyke, Sir Wm. Price and C. R. Whitehead. C. R. Whitehead was re-elected president and Jas. W. Pyke vice-president.

Western Canada

John D. Roche, lumber agent, has been registered with office at Montreal, P.Q.

The King Lumber Company, Cranbrook, B.C., recently suffered a serious loss by fire when their plant was completely destroyed.

Work is to start shortly on the construction of a dam for the Okanagan Saw Mills Co., Armstrong, B.C. The work will be done under the direction of A. D. Robarge, and the dam will be 600 feet long of timber construction.

The Capilano Timber Co., 510 Hastings St. West, Vancouver, B.C., have started work on a sawmill at North Vancouver, B.C., to cost \$28,000. The building will be 100 x 30. Goodwin G. Johnson is the manager.

The wooden steamer Eirine, built by the Pacific Construction Company, for Mr. Nicholas Galianos, of New York, was successfully launched at Port Coquitlam. She is a vessel of 2,800 tons.

Frank R. Keefe, Burns Lake, B.C., is contemplating the erection of a sawmill and dam at Stellaco River, B.C., to cost \$50,000. Work will be commenced in the spring. The owner is in the market for prices on equipment and material.

Wm. Carr, yard superintendent of the Thurston-Flavelle saw mills, Port Moody, B.C., died recently, aged 33 years. He was an alderman for two years and took an active part in the progress and upbuild of Port Moody. He leaves a wife and two children and his passing is deeply deplored.

Considerable damage was done to building and machinery of Doering & Wilker, Rosthern, Sask., when fire broke out in their planing mill. The net loss is between \$4,000 and \$5,000, and the insurance on the building and equipment is \$7,500.

The Hilversum Garden City Units Ltd., has been incorporated with head office at Winnipeg, Man., and capital stock of \$40,000, to carry on business as wholesale and retail lumber dealers and manufacturers, and to operate sawmills, planing mills, lumber yards, etc.

With the first of five 1,500-ton wooden steamers ready to launch and three more well under way, the New Westminster Construction & Engineering Company, Ltd., has laid the keel of the fifth. Simultaneously the company is engaged in the construction of three larger vessels for the Belgian government. Berths and the keels have already been laid.

J. A. Fodey, of the Monarch Lumber Company, Regina, Sask., stated recently that he had heard nothing of an immediate increase in lumber prices. There was no hope, however, of lower lumber prices within the next six months, from present prospects. Lumber dealers, Mr. Fodey added, were not looking for an increase in prices right away, for the fact that the lumber being delivered now was largely stuff cut last fall.

Great success attended the convention of the yard managers of the Imperial Lumber Co., held in Moose Jaw, Sask., for the points which are directly tributary to that city. After an entire day in conference, which dealt principally with the subject of better service to the customers, the gathering adjourned to the Empress Hotel, where a banquet closed the day. This is practically the first convention of agents ever held by the company and it proved such a success that it is now proposed to make it an annual event.

C. G. Bockus, who for some years has been representative of the Vancouver Lumber Company, of Vancouver, in Alberta, with headquarters at Calgary, has gone to Montreal, where he will take charge of the branch in that city, which is being opened by the Allen-Stoltz Lumber Company, Limited, of Vancouver.

The St. Maurice Forest Protective Association are in communication with the Hon. C. C. Ballantyne, Minister of Marine & Fisheries, Ottawa, with a view to securing two aeroplanes for patrolling their territory next spring. The Quebec Government also proposed to give subsidies to the forest protective associations to aid in the work of aeroplane patrols.

Sale of Pulpwood Lands in Northern Ontario

The Lake Superior Corporation and Algoma Eastern Railway Company are open to negotiate for the disposal of certain lands

Approximately 682,000 Acres

situated for the most part in that section of Northern Ontario known as the Clay Belt, and comprising the Townships of Storey, Langemarck, Dowsley, Nassau, Shetland, Staunton, Orkney, Magladery, Caithness, Rykert, Doherty, Whigham, Coppel, Newton, Dale, McOwen, Frater.

The lands in question are accessible to the Algoma Central, Trans-Continental, Canadian Northern, and Canadian Pacific Railways, and should be of particular interest to pulp and paper makers, also to settlers, in view of their agricultural possibilities.

General information will be furnished and plans exhibited at the office of Mr. Alex. Taylor, secretary of the Lake Superior Corporation, 1428 Bank of Hamilton Building, Toronto, or at the office of Mr. G. A. Montgomery, vice-president of the Algoma Eastern Railway Company, Sault Ste. Marie, Ont.

New Dry Lumber For Sale

Approximately 150,000 board feet of hemlock, pine, cypress, maple and oak, mostly 2 inches thick, 6 inches and up wide, 12 feet and up long, located at the plant of the British Chemical Company, Trenton, Ontario.

Approximately 450,000 board feet similar material located at Lindsay Factories, Limited, Toronto.

Approximately 300,000 board feet similar material located at the plant of A. Coates & Sons, Burlington, Ontario.

Approximately 500,000 board feet similar material located at the plant of the Canadian Explosives, Limited, Nobel, Ontario.

The lumber can be seen at the above-mentioned plants, and full particulars will be furnished to interested parties. Tender to be addressed to the **Imperial Munitions Board**, Lumber Department, Imperial Oil Building, Toronto, and to be mailed so as to reach this office not later than March 10th, 1919.

WHY did the Forestry Battalions take our Skidding and Loading Engines with them to England?

BECAUSE their experts knew that by the aid of this machinery they could do their work in the quickest possible time, and at the least expense.

Standard 2 Drum Engine for Skidding or Loading Logs the year round.

WHY is it that naught but praise, and that in large quantities, has come back to us from those who used these machines overseas?

BECAUSE our machines are built, not merely to sell, but to do the work. They can be relied on every time.

They are made in a large range of sizes to suit every need.

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

"Asbestol" Gloves and Mittens are Popular and Economical

Economical because of the unusual wear that is had from every pair, and popular with thousands of lumbermen because of their warmth and comfort. "ASBESTOL" Gloves and Mittens afford absolute hand protection to men in the lumber camps. They are durable and dependable and will outwear gloves and mittens of the ordinary kind.

"ASBESTOL" Gloves and Mittens are built for service. They are of proven merit in quality, construction and value.

Your Drying Problems

Your individual problems of veneer drying may be different or the conditions more exacting. Because it is seldom that two drying problems are the same our engineers make a special study of your particular conditions, considering the relation of the drying to preceding and following operations, quantity to be dried, number of men employed, heat available, cost of power, etc.

Comfort, Wear and Warmth

For
Lumbermen

ESTABLISHED 1852

WELL equipped for the day's work is the man clad in a Clark Mackinaw Coat.

The Coat is comfortable and warm. It is neat, light in weight, and allows freedom in movement while at work.

This is only one of the many splendid articles of Lumbermen's equipment made by the A. R. Clarke Company; we can supply coats and pants in duck, beaver, corduroy, leather and sheepskin. Also gloves, mitts, moccasins, shirts, and socks—each unexcelled in its line.

We understand the needs of the man in the bush, and we are making it our business to supply products of entire satisfaction. Try Clarke's.

LINK-BELT

FOR EVERY PURPOSE

Whether your problem is one of power transmission, elevating or conveying, we have a type of Link-Belt especially designed for the purpose.

And when we say "especially designed," we mean it. For our engineers have spent years in the study of the peculiar conditions and requirements which various industries place upon Link-Belt. Each type has been designed not with the thought of how cheaply it can be made, but how perfectly it can serve its purpose. We show two types of Link-Belt here. Our catalogue shows many others. Send for a copy.

J. T. PAYETTE, Proprietor

The Lincoln Paper Mills, Merriton, Ont., showing the exclusive use of Dominion Friction Surface Belting on Paper Mill (above) and on Motor Drive in Sulphite plant (right).

"Perfectly Satisfactory Service"

This is the way the Lincoln Paper Mills of Merriton, Ontario, sums up

Dominion Friction Surface Belting

The conviction expressed in this statement is clearly established by the fact that our belting is used exclusively in both the paper mill and sulphite plant of the Lincoln Paper Mills.

The reason is obvious—Dominion Friction Surface Belting is not merely rubberized fabric—it is saturated with our special friction rubber surfacing which makes it take a non-slip grip on pulleys that transmits the total force, of each power unit, that can be transmitted by belting.

It is the result of over fifty years of belt-making experience by the oldest and largest rubber organization in Canada.

It is absolutely uniform and dependable—conserves power and labor—"speeds up" production and is the most economical belt for every transmission purpose.

Our belting engineers have increased the efficiency of belting equipment in Canada's largest manufacturing plants—the services of these experts are at your call without charge.

A phone or wire to our nearest branch places you under no obligation and will help to cut your manufacturing cost

Listen to an Aloxite Saw Gumming Wheel in Action

IT sounds good. There is none of that rasping or screeching that indicates undue friction or drag. Aloxite Wheels sing the song of clean cutting—and they cut cool and hold their shape and show long life.

There isn't any more a saw gumming wheel can do, is there?

Aloxite Saw Gumming Wheels

Are made in all standard shapes and sizes. They are uniform in grit and grade. No guess work.

They are Saw Gumming Wheels

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

— IN —

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

Completely Standardized on Belting

ONE of the greatest compliments ever paid Goodyear Extra Power Belting comes to us from Port Arthur, Ont. In May, 1918, the big plant of the Port Arthur Pulp & Paper Company was opened. In six months they had decided to use nothing but Goodyear Extra Power Belts on their Mill machinery.

This decision was not made in a moment. Extra Power received as severe a testing as was ever given belting.

From barkers and grinders, down to cutters and pumps, "Extra Power" was submitted to all the gruelling work and difficult conditions that a pulp and paper plant affords.

"In the six months that we have been in operation," writes Mr. A. G. Pounsford, the General Manager, "we have only had three belt failures, all of which were due to improper riveting."

It is important to remember that belting service in such a plant means continuous service—a breakdown on one machine means a complete shut-down of all production.

To decide, therefore, to standardize on Extra Power Belting, in view of the "very good service" it has given, is a splendid tribute to its dependability and all-round merits.

These time and money-saving features of "Extra Power" are winning for this modern belt a dominant place in Canadian industry.

There are executives in your line of business who keep belt records, who buy on known facts, who balance length of service and performance against price—men whose experience with "Extra Power" will interest you.

Let us send a man trained by Goodyear to discuss your belt problems. No obligation, of course. Just 'phone, write, or wire our nearest branch.

EXTRA POWER BELTING

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

What are You doing with Your Slabs ?

No. 25 Slab Resaw

THE shortage of men in the woods will no doubt continue for another year or two.

It will be necessary to get every possible foot of lumber out of each log to meet the demand.

A Mereen Johnson Slab Resaw will insure your getting the maximum of lumber with the minimum of labor.

That last piece close to the bark will be needed.

Let us tell you about our **RESAWS**. Write for circular.

BOND
DOUBLE-SURE
QUALITY

Bond Patent "Spiro" Compression Couplings

When the inner and outer shells of the "Spiro" Compression Coupling are drawn up over the tapered and spiral-slotted sleeve and bolted, every square inch of the inner surface of the sleeve comes in direct contact with the shaft.

The result is enormous gripping power—at least 50% greater than in any other type of compression coupling, as proven by practical and scientific tests.

This is one of the reasons why "Spiro" Compression Couplings are the make you should specify when your master mechanic or millwright says he wants the "best."

You will find "Spiro" Compression Couplings and our complete line of "Double-Sure" Transmission Equipment fully described and illustrated in our catalog No. 38-PA. A copy should be on your desk; you can secure it for the asking.

Nature's Contribution to Power

30-inch Neptune Double Belt, 91 feet long, driving mill of J. C. Halsema Mfg. Co., Jacksonville, Fla. This belt has been in operation five and one-half years, and is in as good condition as when first installed. It has given satisfactory service at an overhead charge of \$2.17 per week, or a cost of five mills per horsepower per week.

The answer is that this is the right material, in the right place. Nature provided that material, worn originally on the back of a steer. A steer hide is naturally tough, strong, pliable, elastic. All of those characteristic virtues are retained to the right degree in Graton & Knight Standardized Tanning. That tanning is done to meet fixed requirements.

Leather stands hard usage. It has a bull-dog frictional grip. It keeps on taking the punishment of main drives and the side-slapping of shifters—and then comes back for more. Good belting must have tractable pliability. It must be firm. It must stretch and come back when required. It must be easy to splice and repair. Nothing beats leather for these characteristics. No belting beats Graton & Knight Standardized Series Leather Belts.

Not every Graton & Knight Brand is recommended for every purpose. Length of service must be governed by the kind of work to be done.

In some cases, five months instead of five years would be considered top notch delivery and economical performance. G. & K. Standardization means the installation of the specific G. & K. brand of leather belting that will best serve the purpose in hand. But for any given task no other leather belting, no substitute material will give more value for the money, longer service, or more pulling power than the proper G. & K. brand. Power transmission requirements are confined to a few classes. For each one there is a Graton & Knight Standardized Belt. We make all kinds of leather belting for large or small users—from great drive belts to tractor belts for farm use.

Many of the best belted plants ask us to specify the belting for every pulley drive. Try the plan yourself. Then, when buying, call for "Graton & Knight—Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

Write for information about Standardization as Applied to Belting

MAIN BELTING COMPANY OF CANADA, LTD.

MONTREAL, P. Q.

GUARANTEE

This belt is sold in the express understanding that 3% of its purchase price will be refunded for every 1% it actually stretches beyond the first cut. This guarantee applies on all belts running less than 5000 feet per minute on pulleys suited to the ply (see table on envelope) and where loads do not exceed the standard belt horse power rating printed in our catalogue.

Keep stretch record on other side of this tag

DUPLIX FOUR
WHEEL
DRIVE
TRUCK

20 to 60 Per Cent Less Per Ton-Mile With Duplex

Duplex 4-Wheel-Drive per ton-mile saving is a proven fact.

Our owners' records show that compared with other Trucks or with horses and mules, the Duplex cuts the cost per ton-mile from 20 to 60 per cent.

No extra wide or dual tires are needed. Tire expense alone is reduced 30 per cent.

The Duplex drives on all four wheels, giving continuous power. Its fuel consumption is considerably less.

The Duplex goes with a full load where other trucks can not go empty.

The self-locking differential pulls the Duplex out so long as only one wheel has traction.

The double reduction drive gives it tremendous power in an emergency.

These facts all contribute to lowering the ton-mile cost and assuring the operator of freedom from interruptions in his hauling.

Records of lower Duplex costs are available to business men.

The figures regarding logging operations are particularly interesting.

They show beyond any doubt that the Duplex 4-Wheel-Drive furnishes the solution for wood haulage.

Send for booklet entitled "The Modern and Efficient Way to Haul Logs and Lumber."

Waterous Band Mills Are Best

No. 2

TENSIONING DEVICE

The above cut illustrates our saw tensioning device of which we are justly proud. From this cut you can readily see why the new model mill has earned such a high reputation for being easy on saws.

The construction is such that the device as a whole will act independently of the position of the upper wheel.

The fulcrum points throughout are knife edges which make for extreme sensitiveness when a sudden jar or vibration is thrown on the mill. The tension weight is not solid but is a hollow casting supported on an internal coil spring so that when a sudden jar or vibration is thrown on the mill it is taken up by the spring, thus making it impossible for this extra tension or jar to be taken up momentarily by the saw—as is the case with rigidly connected weights when the weights themselves have to move for every shock or vibration,—but the shock is smoothly taken up and balanced by the spring.

That this tensioning device is all that we claim for it in prolonging the life of saws is evidenced by such letters of which the following is an extract:

“We have sawed over 20,000,000 feet this past season, our logs run about forty to the thousand, and have not broken or cracked a saw.”

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN-BABBITT will stand where all other metals will fail. Price, Fort William and East, 65c. per lb.; West of Fort William, 68c., delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

American Model 5-77A Planer & Matcher

Everything is in this machine that is desirable in a high speed Planer & Matcher. The Automatic Belt Release and Tighteners; the **built-in** Cutter Head Knife Jointers for both top and bottom heads; a system of Feed Roll Gearing where there are no chains and sprockets or immediate gears; quick and accurate adjusting and positive locking Matcher Legs; micrometer adjustment of Feed Rolls and Platen, are features that put the model 5 ahead of all competitors.

American No. 34-C Inside Moulder

The general design and form of construction of the frame; the direct and simple system of Gearing; the massive Bed Plate supporting the Matcher Legs; the Side Clamping Boxes quickly removable for change of heads; the accurately fitted and easy adjustments throughout, are all features that make this the most up-to-date inside moulder on the market to-day.

PARRY SOUND, ONTARIO

Sale of Pulpwood Lands in Northern Ontario

The Lake Superior Corporation and Algoma Eastern Railway Company are open to negotiate for the disposal of certain lands

Approximately 682,000 Acres

situated for the most part in that section of Northern Ontario known as the Clay Belt, and comprising the Townships of Storey, Langemarck, Dowsley, Nassau, Shetland, Staunton, Orkney, Magladery, Caithness, Rykert, Doherty, Whigham, Coppell, Newton, Dale, McOwen, Frater.

The lands in question are accessible to the Algoma Central, Trans-Continental, Canadian Northern, and Canadian Pacific Railways, and should be of particular interest to pulp and paper makers, also to settlers, in view of their agricultural possibilities.

General information will be furnished and plans exhibited at the office of Mr. Alex. Taylor, secretary of the Lake Superior Corporation, 1428 Bank of Hamilton Building, Toronto, or at the office of Mr. G. A. Montgomery, vice-president of the Algoma Eastern Railway Company, Sault Ste. Marie, Ont.

Now in Course of Preparation

EXPORT EDITION

of the "Canada Lumberman"

The Main Purposes of This Number:

First—To tell the importers in European and other foreign countries about Canada's timber resources and lumber manufacturing facilities, and the ability of our manufacturers to supply their needs.

Second—To acquaint our manufacturers and exporters with the requirements of foreign markets and assist them in developing the export business.

Some of the Articles that will appear in this important number:

1. Canada's export trade in past years, giving figures showing expansion and trend of trade, including articles by prominent lumber men on the advantages of developing our export trade, sizes of lumber produced in Canada and its suitability for foreign markets.
2. Location and description of timber resources, accompanied by illustrations, including samples of doors, interior trim, flooring, ready-made houses, etc.
3. A comprehensive article describing Canadian methods of logging, bringing logs to the mill, etc., accompanied by illustrated description of several big sawmilling and wood-working establishments, to graphically depict our facilities for manufacturing.
4. Explanation of lumber terms used in this country, with some reference to grading rules, etc.; also a complete explanation of European lumber terms and methods of handling lumber.
5. An article dealing with the transportation problems, shipping ports, facilities for handling our lumber, etc.
6. The probable quantity, kind and size of lumber required in the next five years for rebuilding the devastated area of Europe, comparing this with the normal consumption of the different countries.
7. Description and plans of the types of ready-made houses required for immediate use in Europe.
8. Special article on pit wood and pit props, sizes of wood used, how to prepare it, etc.
9. Special articles on pulp and pulp wood, illustrated with some of our largest mills.
10. Specially written articles on the B.C. lumber export trade; white pine in European markets; what factors have operated against the development of the export trade in the past, and other subjects which will comprise a complete review of the situation.

TWO THOUSAND COPIES DISTRIBUTED ABROAD

REDWOOD MAKES THE BEST TANKS

By its properties of resistance to the effects of wet as well as all kinds of acid, Redwood is the best material for the construction of tanks, and it is being extensively used by tank builders throughout the continent.

Redwood is specially adaptable for vats and tanks in tanneries. We have stocks ready for immediate shipment. Write for prices and particulars.

A roofing material without any come-back.

—one you can guarantee for a lifetime of service—That's what your customers want
—what you want to sell them.

Carry a stock of

BRITISH COLUMBIA

Red Cedar

SHINGLES

(Trademarked)

and you have just the product they want—something you can sell without any fear of a come-back.

SHINGLES sold under our trademark measure up to the highest standard—you know what "Vertical Grain"—"Strictly Clear"—"Free from Sap" means in shingles. Our trademarked shingles are manufactured under grading rules which meet these requirements.

OUR advertising campaign is creating a wider market for our trademarked shingles. There's not a day but that many enquiries are received at our office as the result of the extensive advertising campaign we're carrying on throughout Canada. We pass these enquiries on to you—carry our trademarked shingles—be ready to meet these demands.

Write us for attractive display cards for your office—for shingle literature which will be interesting to your customers. Sent free on request.

SIMONDS

SAW STEEL PRODUCTS

In The Small Saw Mill

Here, as well as in the large mill, the economical superiority of Simonds Saws is easily demonstrated. They hold their cutting edge; they saw true; they make high grading lumber. These things mean profit to any millman. Write us about the saws you want.

Feeding the Camp

IF that is your problem, remember that it is our business, too. We do a tremendous lumber camp trade and are fully acquainted with the food requirements of logging camps. We shall be glad to quote you on any lines you need this year, and will submit special quotations if you will drop us a card. We can supply you with all that's best in provisions and fresh meats, and give you a service you will appreciate.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

The Great Need of National Timber Survey in Canada

What would be thought of the manufacturer, wholesaler or retailer who never took stock. Supposing he conducted his business year after year without preparing an inventory of the goods he had in hand and when questioned regarding the value of his merchandise or manufactured products would simply guess at the aggregate amount. Such a manufacturer or merchant would be regarded as short-sighted, unbusinesslike and inefficient.

The most successful and progressive exponents in the commercial and industrial world know where they are at from a financial standpoint and also from a physical productive and maintenance standpoint. They are apprised exactly and at all times of what they have, where it is located, its present value, where are the best markets, outlets, etc. So far as Canada is concerned we have been told ever and anon about the wondrous and magnificent natural resources that this country possesses, and, in glowing terms, orators and politicians have eulogized the splendid forest assets of the Dominion. Yet possibly not one of them knows definitely or even approximately, what Canada possesses in this particular realm and how long our standing timber at the present rate of cut and consumption, waste and neglect, will last. Even those high in authority have but little knowledge of the total quantity of merchantable saw timber in the Dominion. The best estimates say that it lies between 500 and 800 billion ft., b.m., covering an area of 250,000,000 acres. This is certainly not a very accurate report and what Canadians want to know at the present time, in view of the promising export business looming up, is more about our forests, where they are, what kind of wood they contain, their accessibility, market value, reproductive characteristics, total annual cut, new growth and extension of our wooded wealth by means of tree planting and reforestation.

At the recent meeting of the Canadian Lumbermen's Association, and also at the gathering of the Canadian Forestry Association, strong emphasis was placed on the necessity of a natural survey of our timber wealth in the interests of conservation, economy and development. It is hoped that the Commission of Conservation will be clothed with the essential authority and that the Federal Administration as well as the Provincial Governments will see that the necessary funds are forthcoming to make a thorough inventory of the timber assets of Canada. In this work every care should be taken to learn the various kinds of lumber available, the quality, location and accessibility, together with the available means of transporting the same to the nearest market. In fact, the survey should go further than this and contain a report of all cut-over and non-agricultural lands which are suitable only for forest growth showing the extent and location of the same. If this data was definitely in hand it would be of inestimable value, not only to the lumber operators themselves, but to foreign countries and governments, and would assist our own administrations in developing a permanent, effective and aggressive forest policy which would have the effect of strengthening and stabilizing the natural resources of the Dominion. The proposed move of having returned soldiers engaged in tree planting and general forestry work on lands that are suitable only for extending our timber wealth is one that commends itself to those who have the interest of our country and its upbuild at heart. It has been well said that the big problem now is not redeeming the land from the forest, but of redeeming the land for the forest.

A national survey of Canada's standing timber, showing the kinds, quality, location and accessibility cannot be inaugurated too promptly in the interests of the great lumbering industry of the Dominion. The province of New Brunswick has already undertaken such a task, and, in the words of Mr. C. H. Prince, provincial forester, "It will give definite information of the quantity, quality and value of the timber on any area, from which the stumpage value may be determined. It will show the quantity of species now of little commercial importance, because of lack of market demand, and possibly it may show that these species can be marketed profitably, or, where quantity justifies it, to induce industries utilizing these inferior species to operate within the province, thus profitably utilizing material which is at present going to waste."

The estimate of the annual growth will determine whether or not the annual cut can be increased, or whether to perpetuate the industry, restriction would be placed on certain species to regulate the cut.

This is an admirable summing up of the benefits and advantages of a provincial survey in one enterprising province. The same work should be carried out as thoroughly and comprehensively in connection with the other provinces of this great commonwealth, and the lands of the Dominion itself. It is a vital, national and businesslike proceeding that should be consummated without further delay.

Why Lumber Output Fell During Past Year

Vital Factors Which Affected Operation, Production and Distribution—Stocks are Not Large While Building was Inactive—The Outlook

To review the past is easy, but to cast a horoscope over the future is not so simple. The exigencies of war, the scarcity of labor, the tie-up in transportation in the spring months of 1918, the high cost of production, the augmented freight rates, the numerous restrictions that went into effect on the railways, the United States embargo which was enforced later on all shipments of forest products across the line; all these accompanied by the action of the American Government in fixing prices on practically every kind of lumber required for war work and rigid regulations with respect to building operations and finally the sudden cessation of the strife in Europe, tended during the year just closed to make manufacturers of wood goods stop and wonder at times what would occur next.

After the signing of the armistice buying fell off and shipping took a sudden drop. Business slackened both at home and in Uncle Sam's domain. The attention of lumbermen has since been directed to the export proposition overseas and the furnishing of building material and structural timbers for the recreation of devastated Europe. Just before the close of the world combat influenza broke out in many Canadian camps demoralizing logging operations and adding to the general uncertainty of the situation.

The release of men from the army, forestry corps and munition plants came too late in the cutting season to have any appreciable effect on this year's cut in the woods and in some districts the mild weather has militated against the hauling of the logs to the water-side. Yet in spite of the many unforeseen difficulties which they had to face and the frequent shifting of conditions in the manufacturing arena coupled with the scarcity, independence and restlessness of unskilled labor, high wages and excessive cost of supplies, the lumberman has played his part and come out of the dilemma with a smile and a quiet confidence and assurance that all will turn out right.

While for the present there is uncertainty in many centres regarding the demand for lumber during 1919 and export is not opening up as quickly as many had hoped and foreign restrictions are being lifted only gradually, the future is viewed with no degree of alarm. There is a feeling that present prices will be maintained if not increased and with a decreased production from twenty to thirty per cent in Eastern Canada, less stocks on hand than a year ago and big war requisitions looming for Canada's forest material in Great Britain and the other war ridden countries abroad, the coming year should on the whole be a fairly satisfactory one. Naturally, in view of the abnormal conditions and the realignment in industrial and commercial conditions, the larger operators are proceeding with a certain amount of reserve and conservatism. Higher quotations are expected and in this there are few who will not admit that lumber is worth the price which is being obtained for it today. There is every possibility of a big foreign business being done. True there is some delay in "putting the thing across," but the switch-over from four years of war to an immediate peace basis cannot be accomplished in a few brief weeks.

Statistical Service Will Be Valuable

It takes time to accomplish many things and the spirit of optimism still prevails in the rank and file of the trade. In presenting some observations on the operations and the general features of 1918 in its annual Statistical Number the "Canada Lumberman" has to thank the many firms who have promptly sent in reports and co-operated in the effort to gather accurate figures with respect to the production of the past year.

There has never been a survey or even an accurate estimate of standing timber of the Dominion let alone quality, location and accessibility. The Canadian Lumbermen's Association in favoring such a move at its recent convention in St. John took a step in the right direction. It is time that Canada knew where she is at in the matter of her wooded assets, kinds, extent, etc. Another distinctly forward manoeuvre was the decision to have regular monthly statistical reports compiled showing at regular intervals the amount of lumber on hand, the amount cut, sold, shipped, value, etc., all of which will tend to stabilize manufacturing conditions and to strengthen the market situation.

Under the existing status each lumberman is compelled to furnish the authorities at Ottawa with a yearly statement of the amount cut, but by the time these figures are collected and tabulated they

serve no immediate useful purpose in regulating supply according to demand or gauging the existing situation.

What the industry wants to know is how things are at the present moment, whether too much is being sawn or not enough, etc. In other words as the statistical service is developed and entered into cooperatively there will be monthly reports available instead of waiting until the end of the year to find out what has been done. In view of the export demand, such data will serve as a valuable guide. The figures will only be made public in the aggregate and there will be no way of any one producer ascertaining anything of a private character. No one can use the knowledge to personal advantage as only the totals will be printed. These should give some conception, at least, of the trend of affairs and millmen need not go on piling up stock and operating plants to capacity at heavy cost when there is no justification for going full steam ahead. They will be enabled to adjust output to existing circumstances and have more accurate comprehensions of supply and demand. Over production or under production will thus be minimized and the industry placed on a firmer foundation with an adequate appreciation and enlightenment of prevailing conditions at home and abroad.

The Profits, Production and Output

In reply to series of questions submitted by the Canada Lumberman to the operators in the Georgian Bay and Northern Ontario districts on the matter of profits, in 1918, as compared with those of 1917, twenty reported that they were greater, eight that they were less, and twenty-five that profits were about the same.

In regard to prices, forty-five lumber manufacturers stated that they were greater, one that they were less and another that they were about the same on his lines.

In reference to stocks on hand at the present time, thirteen manufacturers assert that they are greater, twenty-one that they are less and twenty-three that they are about the same. Referring to the log output of the present season opinion is divided, fourteen concerns declaring that their cut will be greater than last, twenty-five that it will be less and twenty-one that it will be about the same.

Regarding the volume of trade in 1918 as compared with the previous year of 1917, twenty of the largest organizations state that the volume was greater, twenty-four that it was less and fifteen about the same.

Summing up the returns as representatives of the general state of affairs it will be seen that there is a practical unanimity that the prices have been greater, but on all the other points raised such as comparative profits, stocks on hand, log output and volume of trade for the year just closed as contrasted with that of the previous one, there is considerable diversity of opinion. Different localities have been variously affected by driving and operating, labor and wage conditions, shipping facilities, the kind of lumber produced, the purposes to which it was devoted or the channels through which it was distributed and other contributing causes.

On the whole it would seem that while production has fallen to a considerable extent, that stocks on hand are less than a year ago, that the volume of trade has in the aggregate shown an increase in proportion to decreased production. Profits, while they have been greater with a number have with others, owing to the shortage of labor, the upkeep and maintenance of plants and camps and general overhead outlay been about the same and in not a few instances less. In other words, the figure obtained for the finished article has not more than kept pace with the augmented cost of getting it out.

How Individual Firms Size Up Things

The opinions of the members of the trade are always interesting and instructive. Here is what a number of leading concerns have to say on the results of the past year and the way they view the lumbering situation so far as the activities, prices and demand for 1919 are concerned.

A Northern firm writes that owing to the higher wages, increased cost of supplies, especially hay and oats, that lumber will advance 10 to 15 per cent. The inefficient class of labor had a great deal to do with the increase in operating costs.

"We believe that lumber prices will be as good or better and will need to be. It has cost far more to take out logs and just at

present labor is quite a lot better. We are having good weather for hauling and no scarcity of teams," asserts another Northern operator.

A Western Ontario company say that they look with confidence to the present year. There is one thing which may affect local trade and that is farmers are getting the idea that prices will be lower and will therefore wait before building. They state that they are looking for hemlock prices to decrease about the middle of the season. Owing to the end of the shell box business there will be more white pine mill culls on the market; this they think will reduce hemlock prices.

A manufacturer in the Midland section expects prices to remain high generally with general conditions improving all round as the year advances until a normal state of affairs is reached, which point is expected as far as prices are concerned will be one-third higher than pre-war quotations.

A firm in Hastings county found it necessary to purchase a large quantity of lumber to help fill their orders during 1918. Since December 1st men for woods operation have been more plentiful. The flu, however, broke up camps for about a month before Christmas. Work has been resumed with full camps and with favorable weather conditions they expect to be able to get out about their usual cut.

"The season of 1918 showed a very high cost of production and curtailment of output. The general demand through the year has reduced available stocks of lumber to such an extent that considering cost and prospective demand, prices should show little, if any, reduction for 1919," observes an aggressive Georgian Bay lumberman.

A company operating in the Toronto district remark that trade in 1918 was less than in 1917 as their stock of logs was less. Enquiries for hardwood lumber give the impression that the demand for 1919 will be good.

According to a report received from the Bruce peninsula basswood sold for \$8 per M more in 1918 than in 1917 and elm for \$5 per M higher. All kinds were higher in price.

Another Georgian Bay manufacturer says that with the opening of spring prices may go higher.

From North Bay comes the report that logging will cost 25 per cent more than last season. A slight reduction is expected by this firm in sawing costs. They do not think the advance in lumber, if any, will equal additional cost of logging and they expect smaller profits.

"Unless manufacturers can get \$8 to \$10 per thousand for their stock they cannot possibly make any money. Wages are 30 per cent higher and a poor class of men available while provisions are up 30 per cent and we have to pay more for our timber," declares another well known producer of white pine in the Georgian Bay district.

A leading concern doing business in the Northwestern part of the province write that they consider that the price of lumber has not increased in comparison with the cost of operations.

"The cost of operating has been so much higher this year we should get at least \$5 per thousand feet b.m. more for our output," is the way a saw mill man on the T. & N. O. railway views the future.

From the Parry Sound district comes the word that the outlook for trade in 1919 appears to be most favorable. There is every indication of an improvement in building and this condition added to the large decrease in the output of logs should make lumber very firm in price.

Still another Ontario company say that they cut mostly hemlock and sold the 1918 stock for \$6 per thousand feet more than they got in 1917.

The wet weather at the start of the season and later the absence of snow and frost made it difficult to get in a stock of logs. The influenza has shortened our cut for two weeks by 6,000 pieces. Our logging costs will be nearly three times greater than two years ago. The ordinary man costs \$100 per month in wages and board, it used to be \$40 and where should lumber prices go to keep pace with this trend of things?" asks an Ottawa Valley who has given close study to economic and industrial conditions.

Business During Past Year of Varied Nature Values Well Maintained, but Other Factors Caused Many Ups and Downs—Record on the Whole Regarded as Satisfactory

The lumber trade in Montreal during 1918—taking every section into consideration—was of a mixed character. It was a period of high prices, combined with a moderate amount of business. Local orders were not anything to boast about, American trade was fairly good, the commercial exports to Great Britain negligible, orders for shipbuilding timber less numerous than in the preceding year, pulpwood firm in price, and the general woodworking industry slow.

The trade had to contend with three drawbacks—the embargoes by the United States, cessation of orders for shell boxes, and the labor shortage. The signing of the armistice also introduced a disturbing element—buyers held off the market for some time, awaiting events. They wanted to see how matters would shape, and how the termination of the war would affect conditions necessarily built up on a war basis. All through the year prices not only held firm, but manifested a hardening tendency, due to the comparatively small amount of stock. If the prophecies of the manufacturers are worth anything, the present year will see a still higher range of values. The cut will not only be smaller than in 1918, but the cost of woods operations and of manufacturing have increased substantially, so that lumber will be bound to go up—at least, that is manufacturers' opinions.

The lumber companies found it increasingly difficult to secure men for the bush, and also for the mills. Many of the men available for the woods proved inefficient and very independent. Wages went to an unprecedented point, and the cost of provisions was very high. Since the release of men from the munition plants, labor has been more abundant in some parts of the province.

The Trade With the U. S.

Business with the United States was good during the first half of the year, in spite of railroad embargoes, but it then fell away, due, to a large extent, to the prohibition of exports across the border, except under license. The prices fixed by the Government Board in

Washington were also so low as to prove unattractive to some Canadian sellers. The requirements of the American Government in training its army diverted considerable business to this side, and there were also some good inquiries for shell box lumber. The ordinary building trade was almost at a standstill in the States, and the demand for our lath was very slow.

Orders for shipbuilding purposes were satisfactory. The local shipbuilding yards were quite busy, and the principal one has contracts which will employ thousands of men for a long time. Construction on war vessels has given place to that on commercial boats; the orders for wooden boats, however, are not likely to be repeated. B. C., of course, benefited by the demand for timber, but outside of this special line, trade in B. C. products were not brisk.

Local Business was Not Heavy

Taking the local market, the building permits, which are pretty good indications of how the trade fared, showed a gain of \$495,235 at \$4,882,873. Unlike in the previous year Montreal contractors were not successful in securing many large jobs outside the city although one or two contracts thus obtained were of unusual magnitude. There was also a diminution in the number of munition factories erected, nevertheless the total number of factories of all kinds constructed formed a very important item in the value of the year's work. The great obstacle to the increase of building was the excessive cost of labor and material, and some contractors, and also some retail lumbermen declare that no extensive building can be looked for until prices come down. Many considerable projects are held up for this reason. It is argued by others that there is no hope of any reduction in cost for a long time—in fact, so long as the cost of living continues at its present level—and that those who contemplate building might just as well face the situation.

From the association point of view, Montreal has become a much more important centre. During the year the annual meetings of the following were held in the city—Canadian Lumbermen's Association, Canadian Pulp & Paper Association, Canadian Forestry Association, and the various Quebec forest protective associations. In addition, there was a fire protection conference, in which all the above co-operated. A successful fall meeting of the woodlands sec-

tion of the Canadian Pulp & Paper Association was held in September. Beside this, the Eastern Canada spruce manufacturers meet and formed an association, so that from the organization point the organization point, Montreal has had more than its usual share.

The Export Season was Reduced

The past exporting season was a very poor one, worse than the previous twelve months. The Government commandeered all the space on vessels for Europe, the exports thus being under control; some of the lumber was bought direct from the mills and other shipments went through the hands of the regular export houses, but all on Government account. In the aggregate the total was fairly large, 57,939,091 ft. b.m., as compared with 39,429,497 b.m. in the previous year, but it did not mean much to the firms who rely on the ordinary commercial exports for their business. A considerable quantity of B.C. fir and silver spruce for aeroplanes was shipped through the port. A certain amount of lumber was also sent to South Africa.

The exporters, after a lean period, are looking forward to a good 1919-20 season. All advices are to the effect that Europe needs lumber, and Canada is promised some large orders for this year for Great Britain. This business will come through the regular exporting houses, and should prove of immense value not only to the exporters, but also to the general lumber trade in steadying the market.

During the year the Harbor Commissioners put into force a higher tariff of dues.

Shell Box Orders Fall Off

The woodworking industries had a quiet 1918. The cancellation of the shell box orders involved the readjustment in certain sash and door firms, who had almost entirely abandoned their original business for shell boxes. These firms had to revert to their usual line. The shell box manufacturers were extensive purchasers of lumber, although the transactions did not prove wholly satisfactory to wholesalers, in consequence of the failures of certain firms in the shell box game. With the cessation of the box orders, this source of buying from wholesale lumbermen was cut off. There were again complaints of the prices secured under contract for boxes, owing to excessive competition, but the Imperial Munitions Board refused to alter their system of awarding business. The commercial box trade was dull.

The small amount of construction was naturally reflected in the slackness of sash and door firms. One of the best contracts of the year, however, that for the doors and interior trim for the new parliamentary buildings, Ottawa, went to a Montreal concern.

Veneers proved difficult to secure owing to the U. S. embargo. Hardwoods were in fair request, the shipbuilding companies being good customers.

Pulpwood in Brisk Demand

American mills again bought very extensively of Canadian pulpwood. There was a large quantity available, and prices remained firm, an average value to Canadian mills being about \$8.50 per cord, with an advance this year. The official figures show that Americans purchased to an unusual extent, and those in this branch of the trade state that stocks in hand are very large. Canadian mills are also in the same position. The outlook for the present year is for a very much reduced cut, owing to labor shortage, the influenza epidemic, and the difficulty of hauling, in many parts of the province consequent on a small fall of snow. This shortage is not likely to affect mills to any extent this year, but will do so in the following period. For the eight months of the fiscal year the exports of pulpwood totalled \$10,846,864, against \$6,329,763 in the corresponding period of 1917.

Pulp Found a Good Market

The pulp and paper industries, the phenomenal rise of which has been a feature of Canadian commerce, continued to expand during the year. Canada is peculiarly well adapted for the manufacture of these commodities. We have the natural resources and an abundance of cheap electrical power. The great market is the United States comparatively little pulp being sent last year to Great Britain. The following figures show the exports for the eight months of the fiscal year:

	1917	1918
Chem. pulp	\$13,072,335	\$21,760,738
Mech. pulp	5,036,802	3,308,126

It will be noticed that while there is a substantial total gain, the exports of ground wood declined.

The market, taken over the year, was good. There were practically no imports of chemical pulp from Europe into the United States during the year, and thus Canadian mills were able to secure a very large trade. The following show the variations in prices during three periods of the year:

	Jan.	June	Dec.
Ground Wood	\$30-35	\$30	\$30
	f.o.b. mills		
Sulphite	\$60 news grade	\$75	\$80
Sulphate	\$80	\$100	\$100

The industries had to contend with an acute labor season during a greater part of the year, but on the signing of the armistice there was a change for the better. The companies have agreed to take care of the returned men who enlisted, a total of 3,000 employees going to the front.

New Pulp Plants to Start Production

The following new mills came into operation during the year—Sulphite; Lincoln Paper Mills, Merriton, Ont., Fraser Companies, Ltd., Edmundston, N. B.; Port Arthur Pulp & Paper Co., Ont.; Mattagami Whalen Corporation, B. C.; Sulphate, New Brunswick and Colonial Sulphate Mills.

The inquiry into the cost of newsprint was continued during the year. The price was fixed by Mr. Pringle, K.C., at \$57 per ton, and in September this was raised to \$69. The publishers showed the strongest opposition to the price, and there were appeals by the publishers and by the manufacturers to a tribunal consisting of Judges White, Middleton, and Archer. The publishers contended that the price was too high and the manufacturers that it was too low. The question of stumpage was one of the vital points, the manufacturers claiming that \$2.00 per ton of paper was a legitimate charge to be included in calculating costs, while the publishers held that it was not justified.

The sub-joined statistics of the production of the province of Quebec are from an official source. There are 8 paper mills, 11 pulp and paper mills, and 12 pulp mills in the province. During the year the forests furnished to the mills 1,100,891 cords of wood, an increase of 38,684 cords. The mills produced 148,859 tons of sulphite, as compared with 374,894 tons for the whole of Canada; out of 4136 tons of soda pulp produced in Canada, Quebec supplied 3576 tons. The province also manufactured 287,623 tons of newsprint of a value of \$16,961,098.

How Some Firms Regard the Outlook

Representative Lumbering Organizations Report that Volume of Trade in 1918 was Fair

From reports to hand representing several leading plants in British Columbia, Quebec, Nova Scotia and New Brunswick, the cut of the past season, as compared with that of a year ago appears about the same. In a few instances the figures show a decrease. The majority of these mills have a capacity of from 15,000,000 feet a year up.

A New Westminster firm declared that the volume of trade during the past year was greater than that of 1917 and that profits were also better. Timbers that sold in 1917 for \$20, rose to \$27, and small stock from \$14 to \$17. Their stock is, in the aggregate, lower than a year ago, and while trade with the United States opened up fairly well for the first few months, it fell off considerably in the latter part of 1918. Their log output this winter will be about normal, and the outlook for the coming year is considered fair.

Another B. C. concern, whose cut was 27,000,000 in 1917, and was reduced to 20,000,000 feet in 1918, in fir, larch and pine, state that the volume of trade the last twelve months was less than the year previous. The peculiar conditions which characterized the business with the United States were embargoes and Canadian export restrictions. The outlook for 1919 in the West is considered fair.

A Nova Scotia firm report that on account of the severe winter they did not get out the usual cut, but they were planning to do so during the present season. About ten per cent of their production was hardwood and profits as compared with those of a year ago, were practically the same. The lath market was found to be very poor, but the prospects for 1919 were considered promising. The log output for the coming season will show an increase of 500,000 superficial feet.

A leading operator in Quebec, who is well known to the industry throughout the Dominion, reports that his cut was 1,000,000 feet more than a year ago. The volume of trade was less, but better prices were obtained. Stocks were about the same. The log output of 1918, as compared with that of the previous one, will be only 70 per cent. There was a dull market for lath and shingles.

A northern B. C. organization who logs all the year round, took out 20,000,000 feet—the same as in 1917. Conditions were spoken of as fair, with the volume of trade about the same as in the preceding twelve months. Stocks practically remain unchanged.

Ontario Production Shows Big Decrease

Drop of Over 107,000,000 Feet in Lumber Cut in 1918 as Compared with 1917— Lath and Shingle Output Also Greatly Reduced

In the Georgian Bay and Northern Ontario districts the production of lumber in 1918 shows a decrease of 107,300,202 feet b.m., as compared with that of 1917. The total cut in 1918 as recorded in reports reaching the "Canada Lumberman," amounted to 514,118,455 feet, b.m., as compared with 621,418,657 feet b.m. in 1917.

It may be stated that the decline of 107,300,202 feet b.m., is more than double that shown in 1917 as when that year is contrasted with 1916 the drop was 42,643,548 feet b.m. All this demonstrates that in each succeeding season since the outbreak of the war there has been a steady reduction in the annual output, running successively from 10 to 15 per cent. The falling off in the lath and shingles has been perhaps more marked.

The decrease in the total cut during the past season was due to a variety of causes, the chief of which was the shortage and restlessness of labor. The high cost of production, absence of export and frequent embargoes upon the railways were also deterrent factors. Then there was the uncertainty regarding when the war was likely to terminate and manufacturers adopted a watchful conservative policy. Other contributing agencies in the diminished cut were the sudden break up of winter in 1918 leaving many logs in the bush which had not yet been hauled to the banks of the stream. This was followed by a period of low water which made driving exceedingly difficult. Added to this combination the flu epidemic broke out in the fall, demoralizing conditions in the mills and camps and during the autumn months there was an excessive downpour of moisture in the northern district.

In view of all these disturbing circumstances the wonder is that the showing is as favorable as that presented in the figures already quoted.

In lath, production in Ontario, according to the figures received, the total in 1918 was 109,441,720 pieces as compared with that of 226,283,760 in 1917, showing a decrease of 116,842,040 pieces. The cause was that there was very little building going on and many lath bolters and machines were not operated as there was limited market for the output.

In shingles there was also a decrease recorded from much the same causes as applied to lath and lumber. In 1918 the shingle production was 11,386,750 as compared with 16,240,250 showing a drop of 4,853,500.

The following are the statistics in detail covering the Georgian Bay and the Northern Ontario districts. They are as accurate and representative as it has been possible to obtain.

Georgian Bay and Northern Ontario Production

LUMBER	1918	1917
Biscotasing		3,200,000
Blind River	14,000,000	17,000,000

The greatest "Own Your Own Home" movement in America is now being pushed in Chicago, this campaign having been deferred by the war. It is planned to erect a modern bungalow on the lake front, somewhat similar to the famous "Own Your Own Home" bungalow which is the nucleus of the big Portland Oregon campaign. The bungalow will be donated by Chicago lumbermen and those of other similar building interests. Leading local architects will submit plans and all the construction work will be done by local builders. Chicago's big stores will furnish the interior with "honey" furniture, draperies, lamps and books and even a perambulator is promised.

The Season's Cut in New Brunswick Drops

Export Shipments Declined and Everything was for War Requirements—Production This Year Likely to be Below That of 1918

From present indications the lumber cut in New Brunswick this season will be an average small cut, says the St. John correspondent of the "Canada Lumberman." One of the chief reasons is the serious outbreak of influenza, which caused havoc in the ranks of the lumbermen and cut down fully twenty per cent of the cut. The weather conditions were good, with the exception of the lower parts of New Brunswick and Nova Scotia, where more snow would have been appreciated. However, as the winter is by no means over there may be sufficient to meet requirements.

Regarding the shipments of lumber from the Maritime Provinces during 1918 there was comparatively little sent overseas. At the present time there is only one big buyer of lumber, namely the British government and as no figures regarding same are available it is impossible to get an estimate of the amount going overseas.

At the present time the health among the men in the lumber camps is reported to be good and if weather conditions remain favorable the cut will be brought out of the woods all right, despite the fact that some are of the opinion that there has not been sufficient snow to swell the streams.

An official of the N. B. government states that from the reports made by the forest rangers of the province for the fiscal year ending October 31st, 1918, it would appear that the cut on Crown lands for the last year would be about as much or a little over the cut of the year previous which amounted to 173,000,000 sawn feet, besides about half a million railway ties and other small lumber.

How Big Exporter Sees Things

Writing to the "Canada Lumberman," a leading St. John firm states there is a feeling that there is going to be a big demand for all kinds of wood products from Canada this year. The quantity produced during the past winter has not been at all up to the average. The shortage is accounted for first owing to the scarcity of labor in the fall and secondly owing to the outbreak of the influenza epidemic, which was a very serious matter for operators in the East and particularly New Brunswick where, according to the best advices, the cut will be reduced from twenty to twenty-five per cent.

For the shipping season of 1918 no statistics are available regarding the quantity shipped forward. The work was carried out entirely by the Imperial Munitions Board and no records can be secured. The last year for which any record can be had is 1917. The figures for that year are herewith given and the comparative returns of the entire province for the previous three years.

It will be noticed in the shipment of spruce deals that 1916 stood first, 1915 second, 1914 third and 1917 was the lowest of all. The effect of the war was thus shown on the greatly decreased trans-Atlantic spruce deal exports from New Brunswick. This particularly applied to the North Shore ports where shipments fell off very largely.

Due to the difficulties of transportation, etc., the shipments from the port of St. John in 1917 dropped to the extent of over thirty million feet.

The statement for that year is as follows:

The Shipments from St. John			
			Sup. feet
G. McKean & Company	1917	50,378,603	
G. McKean & Company	1916	39,730,389	
W. M. MacKay, Limited	1917	26,431,227	
W. M. MacKay, Limited	1916	43,206,372	
J. E. Moore & Company	1917	8,813,730	
J. E. Moore & Company	1916	32,139,709	
Other shippers	1917	3,126,016	
Other shippers	1916	17,202,279	
Total	1917	88,749,576	
Total	1916	132,278,749	

The Exports from Other Points

Shipments from other ports were as follows:—

Campbellton			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	59	59,323	69,045,740
1917	6	16,764	15,083,289

(Part of shipments from Campbellton loaded at Quebec ports).

Dalhousie			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	9	11,676	14,500,000
1917			

Bathurst			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	28	30,143	36,932,222
1917	1	159	161,813

Chatham			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	78	32,082	47,234,540
1917	3	7,577	7,260,095

Newcastle			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	97	47,805	54,602,343
1917	2	5,722	4,463,779

Richibucto			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	8	1,306	1,624,609
1917			

Buctouche			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	8	1,435	1,732,272
1917			

Sackville			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916			
1917			

Albert			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet

1917			

Shediac			
Year	No. of Vessels	Tons	Deals, etc., Sup. feet
1916	1	769	973,000
1917			

How the Trade Rose and Fell

A recapitulation of these figures shows that the total exports from New Brunswick in 1917, compared with the previous three years were as follows:

	Spruce Deals	Sup. feet
1914	217,906,813	
1915	325,890,743	
1916	390,328,479	
1917	115,718,552	

Record of Shipments from Quebec

The exports of wood products, pulp and paper from the Quebec consular district for the calendar year 1918 as compared with 1917 affords an interesting study.

It will be noticed that the shipments of lumber, rough and planed, show a considerable increase during 1918 over the year previous. Lath disclose a decided falling off but shingles reveal a gratifying gain.

The increased shipments in unbleached sulphite pulp are particularly noticeable while other items on the list show ups and downs about equally divided. Verne E. Richardson is the American Consul at Quebec.

The tabular statement of exports from the Quebec Consular District showing the unit, quantity and values in 1918 and 1917 follows:

Paper and Manufactures of:					
	Unit	Quantity 1917	Value 1917	Quantity 1918	Value 1918
Printing news	Lbs.	270,337,754	\$6,493,862	247,097,623	\$7,277,104
Pulpwood	"	234,367	7,466	403,527	11,817
Wrapping paper	"	1,872,055	156,424	1,272,844	78,331

Total			20,399,738		23,381,367

How Lumber Output in Ottawa Valley Sagged

Production Figures for 1918 Season Show Decrease of 78,000,000 Feet—Lath, and Shingles Also Decline - Abnormal Conditions Had to be Met

The production figures for 1918 show that the output of lumber in the Ottawa Valley declined by 78,352,987 feet as compared with 1917; lath was 34,172,250 pieces less, while shingles dropped 16,510 pieces.

Exports of lumber and wood products for the Ottawa consular district to the United States was the only item to show an advance the increase in the value of the products going across the border during the last fiscal year being \$1,145,564 in excess of 1917.

Though a general decline in 1918 in the output of lumber, lath and shingles is revealed by special reports to the "Canada Lumbermen" from mills in the Ottawa Valley there is a vein of optimism running through them which indicates that the lumbermen believe there are better times ahead, both as to local and export business.

The conditions faced by the trade in 1918 were if anything more normal than in 1917, both as to the increased cost of production, uncertainty of labor, embargoes to the United States, and the very uncertain outlook regarding export conditions to Europe. There was also a serious car shortage in the early part of the year which hindered shipments to the United States.

In the face of all these handicaps, the lumbermen of the Ottawa Valley "played the game," and while their activities as represented through the output or production figures indicate a considerable decline, the other side might be easily counter balanced by the advanced costs of operations due to war restrictions, prices, and embargoes.

In a broad sense profit per M feet sold were greater with the majority of the Ottawa Valley mills, but when the lowered output and sales are taken into consideration and the profit made spread over them it is doubtful, if the lumbermen had as great a net return as they were accustomed to receive under pre-war circumstances.

Why the Output Fell off Considerably

Some factors that are pointed to by the lumbermen for the decrease in production are the shortness of the cutting season, scarcity of help, railroad equipment, heavy snow falls, low water in the streams during the spring and the absence of the previous high standard of Canadian woods labor.

The outlook for the 1919 cut while more satisfactory than it was in December, is still a matter of doubt. The lumbermen were attempting to catch up in their 1919 output but were hindered by the influenza epidemic. The lack of sufficient snow in the woods and the mild weather for the first part of the season also made the prospect a big question.

The reports show that a difference of opinion exists with respect to the extent of the stocks. Some companies report them as greater, others about the same and still others less.

Perhaps one of the brightest features that the present year of peace has brought about is the prospect of European trade. While nothing is definitely known regarding when or where the first opening will present itself it is confidently believed that it is bound to come within the next few months.

The advance in price during the last year as indicated by the special reports, over all grades was about \$8 per M. Prices for 1919 furnish a speculative question, which is affected by a wide variety of circumstances surrounding the lumbering trade. The effects of the reduction in cuts, brought about by labor conditions and supply and demand, have during the last twelve months been showing themselves. On the other hand, war demands which kept up business in shell box manufacture and other lines have stopped, and as one lumberman expresses it "if export opens up prices will remain firm."

Total value of exports, 1918, \$5,297,506; 1917, \$4,151,942.
Increase over 1917, \$1,145,567.

The requirements of the war brought about a remarkable revival in wooden shipbuilding, according to D. MacGillivray, past president of the Board of Trade of Halifax, and in the war period it is estimated that 300 vessels, aggregating 200,000 tons carrying capacity, were built in Nova Scotia and added to the shipping resources of the Allies. Their value, when ready for sea, would be about \$30,000,000. The usual number of all craft was, of course, turned out in addition to the above.

Lumber Conditions in Nova Scotia Reviewed

Best Market at Present is West Indies and South America—Call Comes for More Vessels to Carry Wood Products—Shipbuilding Prospects Good

By Elihu Woodworth, Parrsboro, N.S.

The lumber situation in the Maritime Provinces this year presents many problems. Its consideration involves the probable output for the season, the estimated stock on hand, the prices in the British and other markets and the possibilities of securing transportation.

In the first place the number of men in the woods is much smaller than usual. Some operators estimate that the number of men engaged in lumbering this winter is not above fifty per cent. of the normal. Others make larger estimates of the number employed, and possibly in some sections there are as many men in the woods as in former years, but, taking the country as a whole, there is little doubt that there are fewer men lumbering this season than even in the last of the war. One reason for this is the exceptionally mild weather, which has permitted men to work continuously in the shipyards where wages are higher than in the woods. These conditions may change before the season is ended, but they have undoubtedly kept many men out of the woods during the first half of the winter. Of course the war was responsible for much of the shortage of labor especially in the lumber woods for vacancies there cannot be filled by weaklings or women. Many thousands of lumberjacks went overseas and no men did better work in the trenches, while the experience of others in woodcraft was of the great benefit to the Forestry Corps. Some of these men have already come home, others will return later, and some will never come back. Those who have come home seem to be in no particular hurry to get back to the woods, and it is not probable that the lumber gangs will be largely recruited this year from that service. Indeed, it is extremely doubtful whether the average gangs in the lumber woods will be as large for some years to come as they were in the period immediately preceding the war.

Wasteful Methods of Bygone Years

Another peculiarity of this winter's weather can scarcely fail to have an important bearing upon the season's output. This peculiarity is the unusual scarcity of snow in some sections. Plenty of snow is very essential to successful operations in the lumber woods, but it is possible to have in some cases too much of a good thing—and embarrassment of riches, as it were. Snow is frequently so deep in the woods that it makes heavy hauling for teams and a lot of extra work for choppers. In former years, when lumbering was carried on more wastefully than at present it was not uncommon to see a clearing with stumps from two to four feet high as a result of chopping in deep snow without taking the trouble to dig down to the roots of the trees. Timber is too valuable now to permit such wasteful methods, and consequently, deep snow causes much extra work in chopping. This winter in some parts of Nova Scotia there has been practically no snow, and while there has been an excellent opportunity for chopping, the general conditions have been decidedly unfavorable to yarding and hauling. In other sections there has been all the snow that was needed and conditions have been ideal for lumbering. There has been plenty of snow to make excellent sledding and not enough to interfere with chopping. The same holds true of the greater part of New Brunswick. Of course, there is yet time this season for deep snow and drifted woods, but the fact remains that a large number of lumbermen have had an exceptionally favorable opportunity to carry on this winter's work.

The stock of lumber on hand in Nova Scotia and New Brunswick at the beginning of the season has been estimated at two hundred and eighty million feet. How much will be added as the result of this winter's cut is a matter of great uncertainty. Many of the operators—all the large ones in fact—were handicapped at the start by the scarcity of labor, which was intensified in many cases by the influenza epidemic which has been extremely prevalent in some of the camps. Some operators have been hindered or held up altogether by the vagaries of the weather and are likely to make a very poor showing for the season's work. Taken as a whole it seems very improbable that the total cut will amount to little more than one-half of the normal output. But even so, there is little doubt that there will be quite as much lumber on hand as will be able to secure transportation to satisfactory markets.

Much Depends on Shipping Facilities

The prospects with regard to prices are not encouraging at present. Large quantities of lumber are unquestionably needed in Great

Britain, but the market there can scarcely be said to be open. The Imperial Government, through the War Trade Board, still controls shipments and prices. No lumber can enter British ports except by Government orders, and the tonnage required for transporting lumber must either be furnished by the Government or receive its permission. This means, of course, that no matter how great the demand for lumber may be, very little will be shipped to the United Kingdom so long as other articles such as flour and provisions are more needed. When lumber was required for war purposes it had to be procured no matter what the cost might be, but in time of peace prices may easily become prohibitive. Freight rates have already fallen considerably, but they will have to drop lower before lumber can be shipped profitably to British ports. In the United States the reconstruction period is unsettling business conditions as it is on the other side of the Atlantic. Lumber is wanted there beyond doubt, but the dealer will not offer prices at which provincial dealers can afford to ship. It is practically impossible at present to sell lumber in the United States at paying rates. Conditions will probably improve before the season is over, but freight rates will have to be reduced before the American market will be of much benefit to provincial operators. This reduction will come hard, for coasters as well as ocean carriers have a decided objection to lowering their rates, but it will have to be done or they will have to do without cargoes. Our best markets at present are the West Indies and South America and freight rates to those places are easier than they have been. A new market was opened last year in South Africa, and with reasonable charges for transportation it seems probable that a profitable trade could be built up.

The Banner Year in Shipbuilding

Last year witnessed the greatest boom in wooden shipbuilding ever seen in this Province. Some men of vision who were able to look into the future started two or three years earlier and got their reward in enormously enhanced freights or being able to sell at previously unheard of prices. But last year eclipsed all that preceded it and was easily the banner year of shipbuilding. Vessels of various sizes sprang up all along the coasts and there would have been more of them if there had been workmen enough to build them. Some of them were built under contracts made before their keels were laid and while at least part of the timber used in their construction was still growing in the woods. Others were sold almost as soon as work was begun on them at figures that sound fabulous when compared with prices that obtained in former years. Every vessel that was turned off was succeeded by another generally a larger one, and the indications were that the boom would continue indefinitely.

Then came the signing of the armistice which in some cases seemed to produce an almost paralyzing effect. Men who had been ardently optimistic began to suffer from "cold feet" and became earnest converts to pessimism. The bottom had fallen out of everything and wooden shipbuilding in particular was doomed forever. Before very long, however, even the most pessimistic builder began to take a more hopeful view of the situation. In some cases plans were changed to meet conditions, where arrangements had been made for building vessels of a thousand tons or more the plans were in some cases abandoned and schooners of smaller tonnage and better suited for coasting were put on instead. Many vessels which, under ordinary conditions, would have remained on the stocks until spring, have, owing to the exceptional mildness of the season, been turned off this winter, and in almost every case are being replaced by new ones. Many of the new ones are smaller, no doubt than they would have been if the war continued, but it is probable that there will be more than there have been in any year since the boom commenced, and that the aggregate tonnage turned off this year will be greater than it has been in any preceeding year.

But although the boom is likely to continue during this year and perhaps longer, it is nevertheless true that the shipbuilders are faced by serious problems. It was safe enough to build for a rising market with freights going up all the time and when one good charter would nearly pay the cost of construction. It is true that the cost of materials was also advancing and that the price of labor had soared to fabulous figures, but the builders were safe and prosperous, for most of the vessels were built under contract in which the buyer was pledged to pay all bills incurred with a liberal percentage added as the

builder's commission. If prices advanced after the contract was made, as was generally the case, the builder didn't have to worry, for the bigger the bills were the bigger was his commission. His greatest trouble was to secure enough labor at any price to enable him to finish the vessel within the time specified in the contract. There was no danger of the buyer defaulting, for other buyers were ready to take the considerable advance on the cost of construction. When, as sometimes happened, a man undertook to build a vessel for himself he was seldom permitted to keep it, for usually someone was found anxious to buy at a price far beyond the cost of building. In such cases the owner or owners usually decided that it was best to sell when sure of big profits and that the future could take care of itself. Sometimes a second or third attempt to build for home use resulted in a similar manner, and in many instances the local demand remains unsatisfied.

Many Vessels Still Needed in East

There is no doubt whatever that many vessels are still needed in this province. In some sections where building has been extremely active the local fleet is considerably smaller than it was before the war. Some of the vessels were sunk by U-boats, others were wrecked and some have been sold, but their places have not been filled. The greater part of the lumber exported to the United States during the last two or three years has been carried in American bottoms. Schooners from thirty to fifty years old—some of them long out of commission—were fixed up and sent here to do the work that should have been done by our own vessels. Many new vessels are urgently needed for the coasting trade especially to Boston and New York. Others are required for the West Indies and South American trade and some must be had to replace the losses in the fishing fleet. If there should be a demand later in the season for our lumber in the American market we would be able to supply very little unless we could get it carried by American vessels. There never was greater need of vessels than at present, the great problem is to reconcile their cost at war time prices with prices which men who wish to use them for peaceful purposes can afford to pay. Apparently the only solution to this problem is that it can't be done. Prices must come down, and to lower prices to a live and let live basis will be a task. To raise prices and to keep on raising them is a simple proposition, especially with regard to wages, for the great majority of the people interested are in favor of the advanced rates. The war furnished an excuse for high prices, but many workmen have struck for higher wages since the war ceased. In some cases where vessels were almost completed, the demand for increased wages has amounted to a hold-up when the war could no longer be used for an excuse. The reduction of prices and particularly wages has got to come, but it will be a difficult undertaking for precisely the same reason that rendered it easy to advance rates. The men who favored increased pay will naturally be opposed to reduction and will do all they can to prevent it. Even after the high cost of living, which served as a fairly reasonable excuse for demanding higher wages, has come down to something like normal conditions, the average wage earner will be unable to see any sufficient reason for reducing his pay, and this is likely to lead to a long, hard struggle. But in the case of shipbuilding the reduction will have to come or the business will have to stop. Vessels cannot be built for peaceful commercial purposes at prices that were paid in war time. Wages may never drop as low as they were before the war, probably will never reach their lowest level of other days, but they will have to come down from their present elevation or some industries will be forced to close.

\$1,200 Freight Bill on Eleven Spars

Probably few people not directly interested in shipbuilding have any idea of the prices that have been paid in the business during the last years of the war. The increase in wages at least doubled the cost of timber. Oakum, cordage, wire rigging, canvas, chains and anchors and in short everything with metal in it cost three or four times as much as in years gone by. Shipwrights who formerly worked for from \$1.50 to \$1.75 per day have been getting from \$3.50 to \$4.00. Specialists, such as riggers, shipsmiths and scullers, have been paid from five to eight dollars per day, and quite recently some of them have demanded and received ten dollars per day and board. Spars are expensive items. Two or three weeks ago a local shipbuilder and lumber dealer received a shipment of eleven Douglas fir spars from the Pacific Coast. They are the outfit for a tern schooner and two four-masters now nearly completed and their measurements are eighty and ninety feet in length and from twenty-one to twenty-five inches in diameter. The invoice price is from \$3.15 to \$4.75 per foot according to size, and the freight bill was twelve hundred dollars. The war duty of 7½ per cent added more than two hundred dollars to the cost, and after the spars leave the railway they have to be taken to their several destinations by water. Finally each spar, which is sawed into octagon form, has to be finished by expert workmen before it is ready for the rigger.

The conclusion of the whole matter is that more vessels are

greatly needed and are likely to be built, but they cannot be built at war prices unless war is resumed. Lumber is urgently wanted for reconstruction purposes, but war prices are prohibitive, particularly in freights. Prices must come down, for ordinary business cannot continue with war-time expenditure. Prices have already fallen in some lines, and the indications are that they will fall lower, but the decline must become general before business can be reestablished upon a satisfactory basis. It will take time to secure a readjustment and prices may never drop to their former level, but they must drop lower than they are at present and the sooner the better.

Embarks in Wholesale Lumber Business

P. L. Canfield, Woodstock, Ont.

P. L. Canfield, who recently embarked in the wholesale lumber business in Woodstock, Ont., is well known to the trade having spent five years with the R. E. Butler Lumber Company of that city. Mr. Canfield who is specializing in B. C. products and at present has the western agency for the lines, handled by R. G. Chesbro, of Toronto, will cover all western Ontario. These include Coast cedar, fir and shingles, Mountain pine, spruce, fir and larch. Mr. Canfield also represents one of the best stocks of hemlock. He is an old Woodstock boy in which city he was born 33 years ago. At an early age he started office work with the Grand Trunk and Canadian Pacific Railways, with whom he spent some years, after which he was on the staff of a large mercantile house

in London and later resided for three years in Toronto. He then had charge of the furniture house of L. Yolles, Toronto, with whom he remained four years, leaving to enter the retail lumber business in Woodstock in the employ of Mr. Butler.

Stamping Out Disease in Lumber Camps

Hon. Dr. Roberts, minister of health for the Province of New Brunswick, has a plan which if it can be worked out systematically will make lumber camps no longer a source from which smallpox spreads, but would be a great benefit to the health of the men in these camps.

In the first place he proposes to have camps where there were serious outbreaks of smallpox in the past destroyed. In erecting new camps he would have provision made for a sufficient number of cubic feet of air space for every man so that they could sleep in comfort. In every large camp he would have a small one isolated in case any contagious disease broke out among the men. He thinks it is important that operators insist that every man going into the camps be vaccinated. By doing this he believes it would save big lumber operators thousands of dollars, and also save the province and municipalities a large expenditure due to the spread of disease.

The minister has not as yet worked out his plan, but has discussed the question with some of the largest operators in the province. They heartily approved such action and asked that he discuss the matter at a meeting of lumbermen which will be held sometime in the near future, so that the views of all could be secured.

How War Depleted Forests of France

One million two hundred thousand acres of forest land have been destroyed in France by the war and the enemy, according to the estimate of the Service of Forests and Water Supply in the French Department of Agriculture. Over half of this wooded area belongs to the Government or to the communes. France has lost in the war nearly ten per cent of its lumber and six and a half per cent of its firewood.

The building loss in France is almost beyond a calculation. It is said that if no building is done in any part other part of France, twenty years will be required to rebuild in the devastated regions alone.

The leading societies of architects in France have been working since the beginning of the war to make plans for reconstruction, having organized exhibitions of housing, both for farm and town buildings.

B.C. Owns Half of Canada's Timber

Roland D. Craig Estimates That Two Hundred and Thirty Billion Feet Grows in the Coast Region

Roland D. Craig, lately district inspector at Vancouver for the Aeronautical Department of the Imperial Ministry of Munitions, gave an extremely interesting lecture at the University of British Columbia on February 13th. His subject was "The Forest Resources of British Columbia," on which he is probably the man best qualified to speak. With Dr. Whitford, he recently spent three years estimating the total stand in the province for the Commission of Conservation, Ottawa.

Referring to the results of his work with Dr. Whitford, Mr. Craig said that while the data arrived at was not, of course, absolutely accurate, it was still, he thought, reliable enough to give a good idea of British Columbia's forest resources. He estimated these at 350,000,000,000 feet of merchantable timber, slightly more than half of the total stand in all Canada. He thought about 230,000,000,000 feet grew in the Coast region.

For the purposes of their investigation the province had been divided into sixty-six drainage areas, most of which were cruised

distinctly up to us to carefully preserve what we have still got. The timber now standing, with its natural production, was amply sufficient to meet the present annual cut of between 1,250,000,000 and 1,500,000,000 feet, without lessening our forest capital; and even if the cut was increased five times the natural production would balance the drain. But, he emphasized, we had to keep our present standing timber as it is if we were to remain in such a safe position. He gave the quantities of the different growing in British Columbia as follows:

Western red cedar	78,000,000,000 feet
Douglas fir	75,000,000,000 "
The spruces	73,000,000,000 "
Western hemlock	64,000,000,000 "
The balsams	33,000,000,000 "
Lodge pole pine	12,000,000,000 "
Western yellow pine	4,200,000,000 "
Yellow cypress	4,000,000,000 "
Western larch	3,200,000,000 "
Western white pine	2,800,000,000 "
Cottonwood, oak, etc.	800,000,000 "

350,000,000,000

Mr. Craig then described the physiographic features of the province, using specially colored maps by way of illustration. He pointed out the localities in which the various trees flourished, explaining how altitude and the varying annual rainfalls entered into the distribution of species. As a curious exception to the general rule, he mentioned that apparently no balsam grew on the Queen Charlotte Islands, although it might be expected to thrive there. He had looked for it every time he was on the Islands, but he had not once met it, and he knew of no one else who had.

Referring to the manufacture of pulp, Mr. Craig was confident it would be a very extensive British Columbia industry presently. The province had available 170,000,000,000 feet (or 250,000,000 cords) of the very best pulp timber.

At the end of the lecture Mr. Craig invited questions. He got about fifty from his interested audience. The questions—many of them—related to out-of-the-way places all over the province, and in answering them the lecturer showed clearly how well he knew his subject and how thoroughly he had personally covered British Columbia in the course of his investigations.

Statistics of Timber Cut in the West

The tables below give some interesting facts about British Columbia's 1918 cut of timber. The most noticeable figures, naturally, are those relating to spruce, which jumped nearly 250 per cent. The white pine and cottonwood figures also show a greatly increased production. On the other hand, the effect of the United States embargo is seen in the less quantity of cedar cut.

Species Cut	1917	1918
Douglas fir	763,369,000	777,554,000
Red cedar	443,076,000	349,953,000
Spruce	110,569,000	276,569,000
Hemlock	149,761,000	169,792,000
Balsam fir	21,740,000	45,398,000
Yellow pine	90,495,000	70,547,000
White pine	6,468,000	14,868,000
Jack pine	8,760,000	4,828,000
Larch	50,001,000	45,617,000
Cottonwood	2,993,000	5,708,000
Other species	43,000	350,000

Total	1,647,275,000	1,761,184,000
-------	---------------	---------------

Districts	Timber Cut During 1918	Timber Scaled During 1918
Cranbrook	151,828,000	111,805,000
Fort George	26,885,000	25,982,000
Kamloops	39,632,000	27,314,000
Nelson	77,856,000	51,558,000
Vernon	34,278,000	32,099,000
Total Interior	330,479,000	248,758,000
Islands	206,531,000	200,350,000
Prince Rupert	217,531,000	206,515,000
Vancouver	1,006,643,000	913,854,000
Total Coast	1,430,705,000	1,320,719,000
Grand Total	1,761,184,000	1,569,477,000

Magnificent cedar timber on Kila-Anch limits of McLean Bros., Limited, Vancouver, B.C.

carefully. In the extreme north they had been forced to depend on the reports of explorers, prospectors, hunters and other such people. From the forester's point of view, the province was finally divided as follows:

- 359,170 sq. miles, total area.
- 5,670 sq. miles, lake area.
- 353,500 sq. miles, total land area.
- 188,000 sq. miles on which commercial forests are impossible.
- 165,500 sq. miles on which commercial forests are possible.
- 20,700 sq. miles good agricultural land.
- 144,800 sq. miles available for commercial forests.
- 103,200 sq. miles totally destroyed by fire and now unproductive of commercial forests.
- 41,600 sq. miles at present commercially forested.

He estimated the loss by fire at 665,000,000,000 feet—about as much as is now standing in all Canada—and he declared that it was

Needs of Canadian Woodworking Industries

Greater Facilities Required by Forest Laboratories of Canada—Extra Provision Is Necessary for Adequate Research Work

The Forest Products Laboratories of Canada organized under the Dominion Forestry Branch have just completed their fifth year in temporary quarters in the old residence building at 700 University Street, Montreal. It was originally intended that the Laboratories should move in 1918 to a permanent building designed to suit the needs of their specialized activities, and of sufficient size to accommodate an adequate investigative staff, but the Government has found it out of the question to provide such a building during the period of the war.

The present laboratory building, if not now actually in a dangerous condition, is at any rate rapidly approaching it. The Laboratories moreover have outgrown their quarters and certain of their activities are circumscribed and others inhibited altogether for want of space in which to expand. The crying need at present is for a new building.

Notwithstanding, however, the handicap of inadequate quarters, and the further disadvantage of a greatly depleted staff, as the result of calls for men for military service in the great war, a good deal has been accomplished during the past year.

Results of Some Strength Tests

Strength tests on the pines and spruces of Eastern Canada were completed. The results of these tests for green material are available in the form of blue-printed tables; similar results for air-dried timber are being completed. Forestry Branch Bulletin No. 60, "Canadian Douglas Fir" recently issued, contains complete strength data for this western species, together with an illustrated description of the methods of making the tests.

Strength tests were made, at the request of the Militia Department, to determine the properties of a number of British Guiana woods, which had been suggested as possible substitutes for walnut for gun stocks. A short investigation of the mechanical properties of fibre board and vulcanized fibre was also carried out, in co-operation with the pulp and paper laboratory.

At the suggestion of Mr. R. D. Craig of the Imperial Ministry of Munitions, steps were taken towards the establishment of a timber-testing laboratory in British Columbia for investigative work on aeroplane timbers. Arrangements were finally made for such a laboratory on the basis of co-operation between the Dominion Forestry Branch, the Imperial Ministry of Munitions and the Provincial Government of British Columbia through the University of British Columbia. The war came to an abrupt termination before this laboratory was well under way, and the Imperial Ministry of Munitions, its work in British Columbia on aeroplane timbers completed, has severed its connection with the project. However, the Vancouver laboratory is continuing work and is expected to be a permanent testing station of the Forest Products Laboratories at the University of British Columbia. If given the support of the lumber interests of the Province this Laboratory will undoubtedly be able to do work of great value to the industry. At present a comprehensive series of tests of Sitka spruce are in progress under the direction of Mr. L. L. Brown, formerly of the staff of the parent laboratory in Montreal.

A comprehensive review of all published literature on the spent liquor from sulphite pulp mills has been compiled, and is now in the hands of the printer. It will appear shortly as Forestry Branch Bulletin No. 66, entitled "Waste Sulphite Liquor." This should prove an extremely valuable book of reference to pulp and paper manufacturers, and to all interested in the elimination of waste in this country.

An improved method for the estimation of cellulose in wood, worked out at the Laboratories, was published early in the year. This method is being used in a series of complete analyses of Canadian pulp wood species now in progress.

Resin Content of Pulpwood Species

Special analyses are also being made to determine the resin content of our pulpwood species and the composition of the resins. These analyses are being made in such a way as to show the relative resin content of the various species when freshly felled, when felled and river-driven, and when felled, river-driven and stored for a year.

A review of work completed some time ago at the Laboratories

on the technique of beating paper pulp is being prepared for publication.

Experimental work on the preservative treatment of hemlock and jack pine cross ties has been completed. It has been found possible to creosote heart hemlock—an unusually refractory material—very satisfactorily, after first incising by a simple mechanical method developed in the laboratory. By the same method species naturally easily penetrable can be treated in a much shorter time and with less preservative than is ordinarily required. A description and discussion of this work has been prepared, which will appear shortly as Forestry Branch Bulletin 67 "Creosote Treatment of Jack Pine and Eastern Hemlock Cross Ties."

Studies of the preservative treatment of wood paving blocks, with special reference to the use of Canadian red pine for this purpose, have been begun. Special apparatus has been constructed and preliminary work done, and bleeding and expansion tests are now in progress.

Remedial Measures Against Timber Decay

The pathologist of the Laboratories has carried out factory studies of the decay of structural timber, as used in the construction of mill buildings. A large number of structures in which troubles

A portion of the exhibits room at the Forest Products Laboratories of Canada, 700 University Street, Montreal. Open to the public daily free of charge.

of this kind occurred have been examined, and the effect of remedial measures have been noted. As a result, a number of important conclusions have been reached as to the proper design and care of buildings of this class, from the standpoint of decay prevention. Laboratory studies on the relative durability of Canadian woods are in progress, but conclusive results cannot be expected for some time yet.

Studies of the fibre dimensions of Canadian woods were continued. Data of this kind, besides being of considerable scientific interest, is of very practical value in the pulp and paper industry.

The preparation of a complete reference collection of microscopic slides of all Canadian woods has been begun at the Laboratories. A great many such slides were already available, but certain species were lacking. When this set is complete it should be valuable as a basis for comparative studies of the microscopic anatomy and structure of our woods, and their identification.

An instructive permanent exhibit of forest products has been developed at the Laboratories, where it is open to the public, free of charge; every day from 9 a.m. till 5 p.m. This is being added to and improved from time to time as suitable material is acquired. At present it includes exhibits of hard and soft-wood distillation products; timber specimens, showing bark and wood characteristics; models illustrating methods of making strength tests; normal characteristics of wood, and defects in lumber; wood-destroying fungi, insects and marine organisms; mechanical and chemical wood pulps

and their products; and other miscellaneous products and derivatives from trees. The many new uses of wood products have aroused much interest.

A smaller permanent exhibit has been prepared in co-operation with the Canadian Pacific Railway, which is now on view in the Windsor Street Station, and temporary exhibits are prepared from time to time for special occasions, for example, an exhibit which is on its way to the Lyons Fair at Lyons, France.

Another activity of this branch of the Laboratories' work is the preparation of sets of authentic specimens of Canadian woods. These are intended for distribution to manual training and technical schools and other similar institutions.

Why Scientific Research is Essential

Now that the war is over, and members of the staff of the laboratories, who have been away in their country's service on military duty, are returning from overseas, it is hoped that it will be possible to resume investigative work on a much more extensive scale than ever before. That scientific research is essential to a growing industry is one of the lessons learned during the recent conflict, and the lumber and other wood-using industries are no exception to this rule. It is a certainty that the savings resulting from industrial research will represent an amount the interest on which will repay the laboratory expenses many times over.

The larger an industrial research laboratory becomes the more rapidly its rate of efficiency increases and no one can deny the pressing need for study of natural resources in this country. It is hoped that the Federal Government will not overlook the needs of Canadian wood-using industries in this regard, and that provision will be made for an adequate research programme. An expression from the lumbermen would go a long way toward reaching the desired goal.

New Way of Locating Carriage Track Defects

There are many ways and means of locating and correcting curves or kinks in the V-rail of the carriage track, but at best the more common methods are not accurate. Many mill mechanics practice lining the entire guide rail (V-rail) by making a silk line or cord fast at each end of the track and directly over and in centre of the V, which makes it necessary to jack up the side of carriage

while lining takes place. That is very well, but a better way may be used without lifting the carriage off the rails, says R. C. Leibe in the "American Lumberman."

That better way may be described as making this line from end to end tight and instead of over the centre of rail, as stated, let it be about 4 inches from it on the outside of the V-rail, and about level with it. Then use a hardwood block, say 1½ inches square and 6 inches in length, with a V-notch cut in its end to fit the V-top of this rail, and when the line is extended to the end off block, the mechanic may slide this block up or down the half of the track not covered by the carriage, which will show any kinks or curves in the guide-rail; for should this block either pull away or press against

the line, that would indicate either an "in-curve" or "outcurve" in track.

Such a curve or short kink in the V-rail or guide-rail not only shows in every board of lumber sawn, but magnifies it many times, producing what commonly is referred to by millmen as "snakey" lumber, which is fatal to its sale. When these instructions are carried out, the carriage may be moved to other end of track without interfering with the line in any way, and the other half of V-rail may be tested and repaired according to need. Drawbolts may be used to draw this rail to either side until it comes right with the line, which the end of the block will show. The carriage track often is blamed for carriage troubles and when making the V-rail perfectly straight the carriage wheels, bearings, offset collars and hinges thereon should be looked over; and after taking up all lost play, then a new idea may be applied which has proved just why bad lumber is sawn when the saws are fitted with expert care, the V-guide-rail is straight and carriage seemingly in pink condition. To get the saw line the saw actually makes when sawing a log is the idea in a nutshell.

The writer has prepared a drawing which shows very plainly how to apply this test along with other kinks of value pertaining to the track and carriage. Referring to the drawing, which shows the top view of log-carriage, handwheel, saw section in position and one skid of log deck, we will begin at figure 1, which is a line made fast at one end of the carriage frame and extending to the other end and made fast. This line should be made very tight and come on a level with top of headblocks, or a trifle above. The line must also be extended from the carriage enough to just touch the band saw between teethpoints. When adjusted to this position at each end (shown at figures 1 and 2) the test is made by beginning at the front end of carriage and moving it up the track slowly, watching the line where it touches the saw, or nearly so, for an opening to appear, or for the line to press the saw, as the case may be. In ninety-nine cases in a hundred there will be seen serious defects despite the fact that the whole rig seems to be right. The line stretched from end to end of carriage represents the log or carriage itself, while the saw remains the cutting blade, and this line makes every move sideways that the log makes while dogged to the carriage; therefore actual sawing conditions are tested. While this test the saw should be standing still.

Figure 3 shows the bandsaw section. Note the line in position near it. When the carriage moves up, this slides along almost touching the saw, showing every defect and whether a slight curve in V-rail has been overlooked. As the carriage is guided by the two end trucks the curve may readily be located by stopping the carriage at the point where it does not come right with the saw, and after marking this spot with chalk opposite the bottom of each V-wheel as shown by the arrow A to F, the carriage may be moved back and a drawbolt inserted to draw out the curve. The tests may be made again to see if corrected.

Figure 4 shows a valuable kink. It shows the end of a log deck skid with the iron strips on top as used, but on its end nearest the carriage is shown a cast iron cover extending over the top, both sides and front end of the wooden skid. This saves this end from becoming worn, splintered and in bad shape, causing a hollow which prevents logs from landing on the carriage speedily. This iron end cover is bolted on as seen and can be cast at any shop. Figure 5 is a hand wheel, showing position in relation to the carriage. Figure 6 is a carriage frame.

The flat wheels being shown on the mill side, shows the V-wheels on the other. Note the extended line with arrow heads on ends which represent a straight track. Now note at figure 7 a snakey line which might represent a very bad V-rail. If a V-rail could get that bad the line would work back and forth to and from the saw very much, which gives the idea.

Will Hold Big Lumber Congress in Chicago

Walker D. Hines, the new Director General of Railroads, will address the American Lumber Congress on April 16th. This general Lumber Congress to which all branches of the industry are invited, will be held in Chicago at the Congress Hotel April 14, 15 and 16. Methods of retail service and the merchandizing of lumber will occupy the first day's session; the manufacturers and distributors of lumber will discuss their problems in the meetings of the 15th and the next day's sessions will be devoted to Government Relations questions. On April 16 and 17, the National Lumber Manufacturers Association will hold its annual meeting.

The French are looking to the American continent for lumber for reconstruction purposes and the demand will be still greater when their rebuilding plans are more matured.

Vice Consul Davis B. Levis at Kingston, Jamaica, reports that lumber and shingles, valued at a quarter of a million dollars were imported into Jamaica in 1917.

Advantages of Frame Barn Are Numerous

The Plank Frame Structure Has Come To Stay—Some Live Building Pointers for Retail Lumbermen to Drive Home—Need of Good Ventilation

There was a lively discussion on barn plans and the prospects for building during the coming season at the recent convention of the Ontario Retail Lumber Dealers' Association held in Toronto. In the debate on the subject a number of the delegates took part and some good points were brought out in the matter of adopting standard plans particularly as a benefit and convenience to the rural customers of the lumber merchant.

It was felt on the whole that the coming season would be fairly good building one and in some sections that structural operations would be very active. In the course of the discussion one visitor from the East stated that in his section the metal barn had not found any great measure of favor as it was very warm in summer and cold and damp in the winter as the temperature rose or fell. He added that a metal barn being close does not permit of the perfect sweating of hay or grain as does a wooden barn where the siding is open and usually spaced about half an inch apart. This allows of drying and sweating naturally as the fourth side of the mow is open to the drive floor. The metal barns now being erected are more subject he added to fire by instantaneous combustion, owing to gases being formed in the process of sweating out grain that lies at or near the roof, which in summer is very hot and is apt to become on fire through the above cause. The metal roof in winter, if a sudden change in temperature takes place is damp and drips on the hay in the mow, which has a very deteriorating effect on its quality as a fodder. Metal foul air terminals on the peak are subject to this also. Wooden cupolas are not. "As far as fire preventing qualities are concerned, personally I do not see how the metal barn is superior to the old style wooden barn where the siding is left 1/2 inch to 1 inch apart," he concluded.

Framing of the Modern Barn

Several other delegates told of their experience, and John C. Colthart, of Beatty Bros., Limited, Fergus, Ont., who was in attendance, was asked to explain the barn service plan, which his firm furnishes. He stated that they were supplying their barn service for practically the whole of the Dominion, and had plans suitable for most localities. They were always willing to co-operate with the local contractor, with the mutual benefit of each in view, and had many blue prints in their files, a number of which were displayed, showing the class of work turned out. Pointing to an illustration on the wall, Mr. Colthart, in discussing the respective merits of the question, stated that the plank frame barn had come to stay on account of the difficulty in getting timbers long enough and straight enough to build the old-fashioned timber frame.

"A glance at the illustration will show," he continued, "how the framing is so thoroughly braced and how much easier it is to frame than the old timber barn. As far as sanitary walls are concerned in the basement, by experience we find that cement up to the under side of the windows, or a foot above the ground and studding with layer of building paper and lumber on either side of the studding is the ideal wall, as far as warmth and ventilation is concerned. Solid cement and stone walls, unless they are strapped and lined, are very apt to cause condensation in cold weather and dripping in mild weather.

The Proper System of Ventilation

"A good system of ventilation is absolutely necessary in any barn, and we find that the Rutherford system is best adapted to this climate of ours. This system works on a natural basis and not mechanically, as many other systems do. The nearer one approaches nature's laws the more perfect any system is. The Rutherford system works on the assumption, which has been proved correct, that each adult cow requires 8 square inches of inlet per head and 15 square inches of outlet."

The speaker said that his firm manufacture a fresh air inlet which has been recommended by Rutherford and other leading authorities on this subject. This fresh air inlet is sufficient for six head, having 48 square inches of inlet and is provided with a damper so that one can regulate the intake according to the number of head and the climatic condition. This is installed at or near the floor level, the cold air receiving an upward thrust as it leaves the inlet so that no direct draft blows on the cows. The foul air shaft

should be constructed of two layers of tongue and groove material with air space between to prevent condensation and should be carried as straight as is possible to the ridge without interfering with the hay track above. This inner chute should never be less than 16" x 16", and should also be provided with a damper to control too quick or sluggish a draft. A 16" x 16" outlet is sufficient for 16 or 17 head.

Railways Postpone Exacting Cash or Bonds

The Canadian railway companies have advised shippers that their instruction regarding credits, which was to have gone into effect March 1st would not be enforced until at least June 1st.

The Canadian Railway War Board, composed of representatives of the various railways, decreed that credits could no longer be advanced to shippers, and that after March 1st they would have to pay cash for their shipments, or otherwise place a bond with a company, satisfactory to the railway company, to secure seven days' credit.

The action of the railway companies in not enforcing the order is due to the protests that have been made by the Canadian Manufacturers' Association, Canadian Lumbermen's Association, the Board of Trade and individual shippers. Large firms contend that the railway companies demand that a bond as security for payment be placed with a firm, who are no more responsible than their own, is a reflection on their credit and resent it. A still stronger argument against the order is advanced by the manufacturers. On this score they state that many errors are found in the railway companies' billing and think that their traffic departments should be given an opportunity to check up the bills before they are paid.

Mr. Parsons Joins Canadian Western Staff

E. C. Parsons, of Vancouver, has joined the selling staff of the Toronto branch of the Canadian Western Lumber Co., Limited, of Fraser Mills, B. C., and will be associated with L. D. Barclay, local manager of the firm. He takes the place of P. J. McCormack, who is now located in the west and is sales manager of the company. Mr. Parsons, who is a native of Somersetshire, Eng., spent a couple of years in the lumber manufacturing business before coming to Canada in 1907. He located in the west and for eight years was in the service of Rogers Lumber Yards, Limited, Moose Jaw, Sask., being manager of one of their line yards. Subsequently he was with the Retail Lumbermen's Purchasing Agency, of Vancouver, in the capacity of salesman and then went with the Pacific Lumbermen's Inspection Bureau in the grading of fir and other stock at the mills for aeroplane requirements. Mr. Parsons has had a well rounded experience in the manufacturing, selling and inspection ends of the lumber and timber vocations and has taken up his residence in Toronto, where he has already made a large number of friends.

Settling Disputes Arising Out of Shipments

The Senior British Trade Commissioner in Canada and Newfoundland (Mr. G. T. Milne, 367 Beaver Hall Square, Montreal) has been notified by the Imperial Department of Overseas Trade in London that he is empowered to appoint an expert to examine and report upon consignments of goods from the United Kingdom, in respect of which a dispute has arisen, and to certify the signature of such experts as authentic. The Commissioner will, however, only intervene when requested to do so by both parties to the dispute.

The kind of disputes in which the Commissioner may intervene are those regarding goods which are alleged to be not up to sample, or which have arrived in a damaged condition owing to faulty packing. The Commissioner is not authorized to deal with claims under the insurance policies for goods damaged during the voyage. As the official Trade Representative in Canada and Newfoundland of the Indian Government, the Commissioner is also authorized to act in regard to disputes relative to shipments from India. The remuneration of experts appointed by the Commissioner is a matter for the parties to the dispute. No fee will be charged for his services.

The British Trade Commissioner at Toronto (Mr. F. W. Field, 257 Confederation Life Bldg., Toronto) is empowered to act in disputes out of shipments to Toronto and to other centres in Ontario.

Eternal Vigilance is the Price of Safety

Importance of Accident Prevention in the Sawmill and Logging Camps - Necessity of Organization and Co-operation in Minimizing Hazards

The National Safety Council believes that the subject of accident prevention in logging, in the sawmill and in the woodworking plant is so important that it has a special section devoted to this subject. It is known as the Woodworking, Lumbering and Logging Section, and at each of the annual congresses of the council a number of sessions are held by those particularly concerned with reducing the hazard in these industries says G. D. Crain, jr., in the "Southern Lumberman."

The general enactment of workmen's compensation laws, and the necessity for paying indemnity for loss of time, is a further evidence of the value of accident prevention work. When a man is hurt and has to stop work, it is not only a case of individual suffering and deprivation, but the industry and ultimately the community pay the cost of the accident. Thus the lumberman who sees to it that accident prevention work is done among his organization is benefiting himself, his employees and the community at large.

One of the ideas that the National Safety Council has done much

operator, jumped and was caught under the falling crane bed. His thigh was broken and he was otherwise bruised. The first tier of logs checked the complete capsizing of the crane and saved him from being killed."

It may be interesting to explain, in this connection, that bulletins of this sort are issued from the office of the safety organizations every week. They are intended to be posted on the bulletin boards at the plants of members, and to be read by their workmen. The council has nearly 4,000 members, in 150 different lines of industry, and the bulletins are put before 6,000,000 workmen every week. That is why the story that is told, like the one above, is in short, easy words, and in sentences that anyone can grasp the meaning of without difficulty.

The moral drawn from the accident that has been depicted is given in the bulletin as follows:

"This 'Happens' When We Don't Think Safety.

"One of the hardest jobs most of us have to do is to think.

"Plant safety committees have spent thousands of dollars of

THIS "HAPPENS" WHEN WE DON'T THINK SAFETY

Logs were being unloaded onto the second tier back from the track. The men on the car carelessly looped up too big a load, which, when swung out to the side, tipped the crane over.

Peter Campbell, crane operator, jumped and was caught under the falling crane bed. His thigh was broken and he was otherwise bruised. The first tier of logs checked the complete capsizing of the crane and saved him from being killed.

The accident pictured in this bulletin didn't "happen"—it came to pass because some men aren't THINKING SAFETY.

One of the hardest jobs most of us have to do is to THINK.

Plant Safety Committees have spent thousands of dollars of Company money for guards, but what good are guards if men don't mix brains with their work?

Hundreds of dangerous places have been guarded—that's easy.

Now, we find ourselves "up against" the real thing, viz: To make safety as much a part of the daily life of our fellow-workman as is his love for his wife, mother or sweetheart. That's some job, Mr. Safety Committeemen, but it's up to you! Do it as well as you have done the guarding and it will be well done.

An Axe is a Dangerous Tool

In November 1914 Peter Olson, while walking through the brush, stumbled and fell. His thumb was badly cut and his index finger had to be taken off at the second joint.

HE WAS CARRYING HIS AXE UNDER HIS ARM

UNSAFE WAY

THE RULE—"The only safe way to carry an axe is with the handle on the shoulder and the head back of the shoulder. Many men who have carried the axe with the head under the arm have stumbled and fallen and have been seriously injured."

Watch Your Axe

SAFE WAY

In one State 271 men were injured handling axes during the last 18 months.

Safe and Unsafe Logging Equipment

← UNSAFE

The old side stakes, bound together with wire, always a menace to human life, and a confining expense for time and labor.

SAFE

Automatic car stake, tripped from the rear side, combines durability, economy and safety.

Some instructive bulletins issued by the National Safety Council

to get rid of is that all there is to accident prevention is guarding machinery. This is important, of course, and exposed gears and dangerous belts cause accidents. But merely covering up points of hazard in machinery and equipment does not mean that all of the accidents are going to cease. The majority of accidents come about from other causes. Many of them have nothing to do with machinery, and in many cases the employee is careless and brings the accident on himself.

The attitude of the employer in such a case is one of impatience and irritation—why didn't the employee use his head? But few sawmill men stop to think that even a country negro can be educated into better attention to safety methods, and that the most ignorant worker can be trained into thinking safety. When a man really puts "safety first" in his work, he is not likely to have an accident, and furthermore he is likely to implant the same idea in the minds of his fellows. It is the careless employer who has the highest accident rate.

Consequently, the bulletin service of the council has been especially useful in pointing out general hazards, which have to do with the individual rather than the machine. A very interesting bulletin, which was intended to show carelessness in handling logs is reproduced with this article. It shows a scene in the log yard of the Kimberly-Clark Company, Neenah, Wis., where a crane was turned over because of an excessive load. The description of the accident that goes with the picture says:

"Logs were being unloaded onto the second tier back from the track. The men on the car carelessly looped up too big a load, which swung out to the side, tipped the crane over. Peter Campbell, crane

company money for guards, but what good are guards if men don't mix brain with their work?

"Hundreds of dangerous places have been guarded—that's easy.

"Now we find ourselves up against the real thing, viz: to make safety as much a part of the daily life of our fellow-workman as is his love for his wife, mother or sweetheart. That's some job, Mr. Safety Committeemen, but it's up to you. Do it as well as you have done the guarding and it will be well done.

"The accident pictured in this bulletin didn't 'Happen.' It came to pass because some men aren't THINKING SAFETY."

Another bulletin shows the difference between safe and unsafe logging equipment. In one instance, old side stakes, bound together with wire, are shown in use on a car. The safe method, involving the use of automatic car stakes, tripped from the rear, is then shown below. This is one of the main advantages of these bulletins—they not only point out the wrong way, but they proceed also to show the right way of doing the thing.

Similarly, safe and unsafe methods of carrying axes, saws, etc., are shown. Some of the bulletins, as may be gathered from these remarks, are specialized, applying only to certain industries, such as logging and sawmilling, and others are general and indicate hazards that are common to all industries. The rule suggested for carrying axes, which is quoted from a bulletin of the Wisconsin Industrial Commission, is as follows:

"The only safe way to carry an axe is with the handle on the shoulder and the head back of the shoulder. Many men who have

carried the axe with the head under the arm have stumbled and fallen and have been seriously injured."

Dealing with carelessness in handling saws, a picture shown on one of the bulletins depicts a workman walking through the woods, with this comment:

"Arthur Schwarz was walking through the woods with his saw under his arm. His foot tripped and he fell. His arm and side were badly cut by the saw teeth.

"William Berg, while walking on a log with his saw under his arm, slipped and fell. The saw cut a deep gash in his wrist."

These pictures, showing the men actually at work, and giving their names and the circumstances of the accidents, make a deep impression on workmen. They see themselves in the same places, and realize how easy it would be to get hurt in the same way. That impresses on their memory a rule such as this one, which ordinarily would have little permanent effect, because it would not appeal to the imagination:

"The only safe way to carry a saw is to carry it over your shoulder with the teeth pointed away from the neck."

Seeking the Co-operation of Employees

Reference was made in one of the bulletins quoted to the importance of safety committees, and the valuable work which men on these committees can do. Some of the industries, such as iron and steel, have succeeded in making a tremendous decrease both in the rate and severity of accidents by enlisting their men in safety work. Too few lumbermen have taken up the question or sought to get the co-operation of their men to prevent accidents. Their attitude often is that they are paying the insurance company to take care of claims, so what's the use? But the insurance companies are getting to the point where risks with large loss ratios are penalized with high rates, and those with favorable records in this respect get lower rates. Hence the lumber plant which through organization of the men and education of them to safety ideas brings down its accident rate is immediately in a position to claim a lower insurance rate, and to make this saying while at the same time it maintains its working organization in better shape and shows less time lost from work by its employees on account of accident.

Some interesting material regarding the organization of men along safety lines in logging camps was given at one of the sectional meetings of the National Safety Council a year or two ago by Robert B. Goodman, of the Goodman Lumber Company, Goodman, Wis., who said:

"A modified form of safety organizations has been suggested for the larger camps, in the form of a committee composed of three to five of the best employees. Their duties would be to inspect chains, jammers and similar apparatus; look after accident preventions in general, and have authority in all matters relating to safety. Particular stress is laid on the moral effect of such a committee.

"I am not in favor of special organizations in our logging camps for the reason that I have not found many practical loggers who will enthuse on this subject. They all prefer to place the full responsibility on the foreman.

"We are at present facing a serious situation. The old-time lumberjack is passing, experienced wood workers are becoming scarce. Our forces are being recruited largely from inexperienced men, and our compensation laws have, to a certain extent, relieved the shortsighted workman from apprehension. On the other hand, we are beginning to experience the change that has taken place more largely in other regions from human and horse energy to steam machinery. The introduction of steam machinery in our woods brings with it, of necessity, the introduction of more definite organization, the adherence to specific rules of conduct and the possibility of specific safeguards. What special dangers it brings with it are so obvious that the actual danger is greatly diminished."

What Vigilant Committee Can Do

M. L. Fellmer, chief safety engineer of W. H. Markham & Co., of St. Louis, made a plea for the safety committee at the same meeting, when he said:

"Experience shows that mechanical guards eliminate a little less than 30 per cent of preventable accidents, therefore the education of all concerned is the main object of every safety campaign. The only effective plan of safety organization is the committee plan. The management appoints a central committee, consisting of the superintendent and a general committee of workmen from the different plants, or, in the case of one plant only, from different parts of the plant.

"Just try forming such a committee from the workmen and turn them loose to make an inspection once a month, and instruct them to look for conditions that they would change if they owned the plant, and watch results. If they do not show you many a condition that needs material improvements, you have either not impressed them thoroughly enough with the fact that you wanted their co-operation

and that they need not fear censure for constructive criticism of existing conditions, or you have a perfect plant. Then you can 'light up' and pat yourself on the back, but in the language of the farmer that saw the giraffe at the circus, 'they ain't no sich animile.'

"Not infrequently the workmen's committee reports conditions that, if properly taken in hand, will result in a material increase in efficiency. Let the workmen's committee report their findings to the central committee for their approval or rejection. Right here let me emphasize again that it is the spirit of co-operation you are after and that spirit must be in evidence at the meetings.

"The men may make suggestions which the management finds impracticable or not acceptable for one reason or another. Wherever feasible tell the committee why the suggestion cannot be used. If you do not feel that you should tell them, thank them for their effort

Saws Are Dangerous

HE TRIPPED

"Arthur Schwarz was walking through the woods with his saw under his arm. His foot tripped and he fell. His arm and side were badly cut by the saw teeth."

HE SLIPPED

"William Berg, while walking on a log with his saw under his arm, slipped and fell. The saw cut a deep gash in his wrist."

RULE No. 2

"The only safe way to carry a saw is to carry it over your shoulder with the teeth pointed away from the neck."

Logging Series No. 8

The wrong and the right way to carry a saw

anyway, and encourage them to further effort, although you cannot accept this or that suggestion.

"After you have held a meeting of the central committee call together the foremen and watch 'em open their eyes when they see how this or that operation can be made safer and more efficient, how this or that condition in their department can be improved. An amusing incident happened not so long ago in a plant which has just instituted a safety campaign. At the meeting of the foremen a young foreman's attention was called to certain conditions as existing in his department. The young chap smilingly said, 'That may have been true at the time the inspection was made, but go out there now and I'm certain you can't find the condition.' When he was asked why and how, he said 'I pumped the committeeman before coming here and went right after the thing.' That was the most gratifying thing in that young safety campaign. The spirit of Safety First was permeating that organization through and through.

"Naturally, the personnel of the shop committee should be changed from time to time, and as the committeemen step back into the

ranks, they will still disseminate the spirit of the work among their fellows and caution newcomers against unsafe practices. At the meetings of the committees do not have parliamentary rules used—make it a round-table affair. A good cigar handed around helps a whole lot in getting the men at their ease.

"Employers in the sawmill industry frequently are still better situated as regards the safety movement than are the employers in the woodworking plants in cities. In a great many instances the sawmill employer is the only employer in his locality. He personally knows all of his employees, and any efforts shown by him to improve working conditions for his men and to reduce the chances of accident are bound to produce the most beneficial results."

The Practical and the Humanitarian

Suggestions for the organization of safety work in a sawmill were summarized in another paper read before the Logging, Lumbering and Woodworking Section of the National Safety Council in the following:

"The employer should be satisfied in his own mind and convinced beyond a question of doubt that it is a practical business proposition as well as a humanitarian one.

"He should impress upon his management, superintendents and foremen the practicability of such and his sincere intentions to carry out the work, thus making it a part of their duties.

"He should adopt some feasible plan which would provide for practical mechanical safeguarding; co-operation and education of employees and should also formulate an organization to carry out such a plan."

While sawmill men have not gone into the matter of organizing their employees for safety as enthusiastically as some other industries have done, there is little doubt that this will prove to be one of the best investments of effort that a lumber manufacturer can make. The men will appreciate it because it will demonstrate the interest that the employer has in their safety, and it will react favorably in every possible way. But, as indicated above, the lumberman himself must be "sold" on the idea or safety committees before he starts anything along this line.

One of the big divisions of the work of the National Safety Council is the Health Service Section. It has realized that there is a close relation between the health of the workman and his liability to accidents, and likewise that sanitary conditions in and around the plant affect the chances for health on his part. Industrial physicians and surgeons, who are employed by large corporations to care for cases of sickness and accident, compose the membership of the Health Service Section, which is issuing a series of bulletins directed to the workers and advising them as to simple rules of hygiene by means of which to direct their daily lives. All of these things are of the utmost value in improving the general character of the workers.

The writer has followed the work of the National Safety Council for some time, and is impressed with the value and practical character of its efforts. The lumber concern which is interested in improving safety conditions in its logging work or at its mill or woodworking plant should make a point of joining the organization and getting the benefit of its advice and service along this line. It will receive all of the bulletins and pamphlets which it issues, and which cover all phases of safety organization and effort. The proceedings of the congresses are also put in permanent form, providing a library of reference material that is of great importance.

Never before was man-power of such value; never was the importance of accident prevention greater, and never were the dividends which will be paid to the employer who gets into the accident prevention greater, and never were the dividends which will be paid to the employer who gets into the accident prevention game so sure and large.

He Had Narrow Escape From Drowning

Grant P. Davidson, of James Davidson Sons, Ottawa, narrowly escaped death by drowning in the Colongue River during the course of a recent tour of inspection of the woods, camps and bush operations.

A sleigh carrying Mr. Davidson and two others crossed some thin ice which had formed over a hole, which had not been marked. A logging sleigh had "gone through" the day before. The horses dropped and the occupants jumped, Mr. Davidson going clean through the ice up to his armpits. He kept himself above the water by extending his elbows and arms to the supporting ice around him. The current at the point is very swift, but Mr. Davidson finally managed to extricate himself. After his icy bath he has so far escaped with no other complications than a heavy cold. His brother and partner Keith Davidson, instructor of the 91st squadron of the Royal Air Force, is expected to return to Canada in six weeks.

Retailer Believes in System and Service

"System and Service" is the slogan of Wm. E. S. Savage, who for the past two years and a half years has been in the retail lumber line in Mimico and has met with a large measure of success in his undertaking. Located on the Lake Shore Road between Mimico and New Toronto he opened out to do business in August, 1916. Mr. Savage soon discovered that he had settled in the right place as the various busy factories in the neighborhood require lumber all the time and their numerous employees are fast removing to the district near their work which means the erection of new houses, general repairs and extensions. There are no vacant dwellings in either Mimico or New Toronto and consequently there is every inducement for home building. Mr. Savage states that located as he is in the centre

Wm. E. S. Savage, Mimico, Ont.

of what is bound to be the most industrious suburb of Toronto, he finds his business increasing steadily. In November last he was obliged to add several new machines in order to manufacture sash and, with this addition to his plant, he now possesses a well equipped planing mill and sash factory, which places him in a position to supply builders with everything that they may require.

Mr. Savage recently erected a commodious and well appointed lumber storage shed and this, with his other facilities, makes the factory and suitably arranged adjoining buildings complete in practically every detail. The piling space in his lumber yards is carefully laid out and all lumber systematically arranged. Mr. Savage does not claim to run the largest yard, but his business is growing satisfactorily. He has an excellent site and with strict attention to wants of his patrons and a well assorted stock he reports that the prospects for the coming season are very good. He makes a specialty of detail work and handles not only pine, hemlock and hardwood lumber, but also shingles, lath, cedar posts, sash, doors, and wall board.

B.C. Forest Branch Statistics

Timber scaled in B. C. during the month of December, 1918, was as follows:

Total interior—Douglas fir, 5,232,964; red cedar, 3,693,734; spruce 981,563; hemlock, 325,745; balsam, 311,417; yellow pine, 1,223,783; white pine, 800,594; jack pine, 495,001; larch, 1,220,754; cottonwood, 100; birch, 1,813. Total Coast—Douglas fir, 53,395,826; red cedar, 25,914,532; spruce, 25,532,202; hemlock, 18,160,180; balsam, 3,712,879; white pine, 375,685; jack pine, 1,257,312; cottonwood, 510,695; cypress, 2,921; maple, 2,311. Total for B. C.—Douglas fir, 58,627,890; red cedar, 29,608,266; spruce, 26,513,765; hemlock, 18,483,925; balsam, 4,024,296; yellow pine, 1,225,783; white pine, 1,176,279; jack pine, 1,750,313; larch, 1,220,754; cottonwood, 510,795; cypress, 2,921; maple, 2,311; birch, 1,813. Total all species 143,147,111 feet b.m.

Revenue statement for month of December, 1918, was as follows: Timber licenses, \$202,909.54; hand loggers' license fee, \$350; timber lease rentals, \$668.56; timber sales, \$21,546.12; scale and royalty, \$147,453.17; miscellaneous and refunds, \$597.16. Total, \$373,524.55. Forest Protection Fund, \$12,853.76.

Has Canada Lost Big Portable House Order?

Will Canada lose a six-million dollar order for 10,000 portable houses to the United States or Sweden? There seems such a probability according to information gleaned recently, when it became known that the Government through Hon. A. K. MacLean was not prepared to offer relief in the matter of reduced ocean freight rates, writes the Ottawa correspondent of the "Canada Lumberman."

The order for the 10,000 portable houses was secured by Mr. A. G. Rose of Ottawa who lately went overseas to represent the interests of the Canadian Timber Products Association, and its acceptance was subject to the approval of the association. Some time ago press reports were to the effect that William Rutherford and Sons, Montreal, had received an order for \$4,000,000 for portable houses, but according to information given by a member of the Association at Ottawa this report was incorrect.

Instead of being \$4,000,000 the amount of the order received was \$6,200,000 and the houses were not all for the Montreal firm but were to have been split up into lots or shares and given to the different factories, fourteen in all, who are members of the C.T.P.A.

It appears that the members of the Association found they could not accept the order at the price quoted overseas to secure it, on account of the high ocean rate, which, at present is seventy five cents per cubic foot. Accordingly representations on behalf of the Association were made to Hon. A. K. MacLean requesting that the Government intervene and secure a freight rate of twenty-five cents per cubic foot.

After hearing the deputation Mr. MacLean gave the impression that he did not see how anything could be done. In addition your correspondent has been informed that the shipping companies are not anxious to lower the existing rate for ocean tonnage, preferring to handle grain or flour in preference to portable houses.

"A six million dollar order is not picked up every day, and besides it means in this time of unemployment a great deal to the labor of the country. We certainly think the Government should do something to get us a lower ocean rate so this business can come to Canada," said one of the leading lumbermen at Ottawa, who is also a member of the Canada Timber Products Association.

"Work has never been so quiet in wood working factories in Ottawa for twenty years. Here we have an opportunity of securing an order that will give employment to about three hundred factory hands for many months, and the Government seems to be indifferent whether it is done or not," he added.

It is further stated that the order has only been secured in competition with representatives from Sweden and the United States. If Canada cannot get a lower ocean rate to meet the competition abroad it seems highly probable that the business will be placed elsewhere, and tens of thousands of feet of Canadian lumber, and the prospective source from which Canadian labor will derive benefit will be lost.

As an illustration of some of the sales and shipping conditions as they exist, it is interesting to remark that every stick of pine in the yards of one big lumber company has not only been sold but shipped principally overseas, the bottoms going via Boston to the Old Country. The proportionate increase in freight rates by the Ottawa company shipping via Boston instead of Montreal are six, to one and one half.

New Lumber Company Will Operate Near Spragge

A charter has been granted the Beaver Timber & Tie Company Ltd., with a capital stock of \$100,000 and head-quarters in Toronto. An office has been opened at Room 408 Tyrrell Bldg., King St., East, Toronto. The provisional president of the company is Edward Howell, of Mimico, who has been for years a well known local contractor and builder. The manager is Thos Elliott, of New Toronto, who is a practical lumberman having had wide experience in logging, sawing and construction work in the province of Quebec.

The new company have acquired the timber rights and site of the Maple Lake Lumber Company, whose mill at the mouth of the Serpent River in the Lake Huron District was destroyed by fire three years ago. This mill will be rebuilt and it is expected will be in operation early in the summer. The output will be about 20,000 feet a day and the Beaver Timber & Tie Company expect that their cut during the coming season will not be less than a million feet. The site of the industry is two miles east of Spragge and one mile from Serpent Siding, being on the C. P. R. In the timber rights that have been secured it is estimated that there are about 6,000,000 feet of white pine, 12,000,000 feet of hemlock and birch, 1,000,000 feet of red oak and 1,000,000 feet of spruce as well as other timber. The cutting rights extend over the townships of Proctor and No. 143 in the Algoma district covering 44,000 acres, or an area of 72 square miles. The location of the mill will be at the mouth of the Serpent River where the stream enters Lake Huron. The mill site consists of

28 acres and the Serpent River is well improved for driving purposes, the log drive from the most northern section of the companies limits to the mill being only 20 miles. Construction will start as soon as the building season opens and will be rushed. In its growth and varied character the timber is spoken of as one of the best concessions in the north and Messrs. Howell and Elliott along with the others associated, are most enthusiastic over the prospects of the company.

Death of Mr. James C. Shook

Mr. Jas. C. Shook, manager of the Dickson Company, died on March 6th, in Peterboro, after an illness of several months. Mr. Shook was 66 years of age and, previous to locating in Peterboro in 1905, was connected with the lumber industry in and around Toronto. He spent some time in the west and was widely and favorably known to the trade. Mr. Shook was an upright, enterprising and patriotic citizen of Peterboro, taking an interest in all religious, charitable and patriotic organizations. He stood for all that was progressive and true in the community and was held in high esteem. He is survived by his wife and three sons, Archie at present in France with the 18th Battery, Kenneth of Vancouver, and Donald of Toronto. Mr. Shook's death marks the third bereavement in the family within one month. His brother died in Clarkson, Ont., recently and Mrs. Shook's mother passed away in Toronto only a few days ago.

The Hosts at the Retailers' Dinner

At the recent banquet held at the King Edward hotel, Toronto, which was tendered the delegates to the annual convention of the Ontario Retail Lumber Dealers Association, the hosts were the wholesale lumber dealers of Toronto and Western Ontario. The event, which was a signal success and was fully reported in a recent issue of this paper, marked the largest gathering of the trade which ever took place in Ontario. The complete list of hosts at the enjoyable function was:—

Allan-Stoltz Lumber Co., The C. G. Anderson Lumber Co., Messrs. Robert Bury & Company, Messrs. Campbell, Welsh & Paynes, The Canadian General Lumber Co., Canadian Western Lumber Co., James G. Cane & Co., Edward Clark & Son, A. T. Dadson, J. M. Donovan, A. N. Dudley, Dunn Lumber Co., Elgie & Jarvis Lumber Co., Excelsior Lumber Co., Eyer Lumber Co., Fesserton Timber Co. Gall Lumber Co. Hart & McDonagh, J. P. Johnson & Son, Johnston Lumber Co., Knox Bros., R. Laidlaw Lumber Co., James Lauder, Leak & Co., W. Y. Lloyd, W. J. Lovering, Messrs. McBean & Verral, Muir & Kirkpatrick, Oliver Lumber Co., Pedwell Hardwood Lumber Co., Read Bros., Riter & Co., Seaman-Kent Co., J. B. Smith & Sons, Ltd., W. J. Smith, James R. Summers, Terry & Gordon, Union Lumber Co., Vancouver Lumber Co., Victoria Harbor Lumber Co., Sidney Anderson, Toronto; Beck Lumber Co., Penetang; R. Laidlaw Lumber Co., Sarnia; Long Lumber Co., Hamilton; Mason, Gordon & Co., Montreal; Mickle, Dymont & Son, Barrie; Sheppard Lumber Co., Waubesa; Hocken Lumber Co., Otter Lake; Monteith Bros., Rosseau; Percy E. Young, Kitchener; P. L. Canfield, Woodstock; Goodyear Lumber Co., Oskosh, Wis.

Big Project Not Yet Decided Upon

It was stated by a high official of the International Paper Company, of New York, that no further action had been taken in regard to the plans for building a pulp and paper mill at Three Rivers, Que. The company has been contemplating building a pulp and paper mill at this point for some time, and it was thought recently after officials from the company had visited the locality, that work would begin in the near future. The plan for building mills in the Three Rivers calls for an expenditure of \$6,000,000, and includes the development of Les Forges Rapids, on the St. Maurice River, 9 miles north of Three Rivers.

Northerners Want the Hinterland Developed

Delegates nearly one hundred strong, representing the district between Cochrane and James Bay, and bearing the slogan "On to the Bay," were recently in Toronto interviewing the provincial authorities. They asked extension of the T. and N. O. from its present terminus at Cochrane to the shores of the Bay. The opening up of wide pulpwood areas, the water powers of the James Bay slope, the fixation of atmospheric nitrogen, the iron ores in the Mattagami-Basin and the Belcher Islands, the gypsum beds in the James Bay slope and the other mineral fields which would be opened up by such an extension were urged. Consideration was promised the requests of the deputation by the Premier Sir William Hearst and Hon. G. Howard Ferguson, Minister of Lands, Forests & Mines.

Personal Paragraphs of Interest

John Kesley, a sawmill owner, of Venosta, Que., died recently. T. J. Stevenson, sales manager of the Riordon Pulp & Paper Co., was a recent visitor to New York.

P. D. Gordon of Mason, Gordon & Co., Montreal, is on a business trip to the mills in the Pacific Coast province.

Duncan McLaren, president of the Union Lumber Co., Limited, Toronto, and wife are spending a few weeks in Florida.

George Kersley, wholesale lumber and veneer, Montreal, has just visited Chicago, Indianapolis, and other U. S. points, on a business trip.

Major General Alexander MacDougall, C.B., director general of timber operations in England and France, has returned to his home in Ottawa.

D. C. A. Galarneau has taken a position with the St. Maurice Paper Co., Limited, of Three Rivers, Que. He was lately employed as forester with the Algoma Central Railway.

C. W. Wilkinson, general manager of the Union Lumber Co., Limited, Toronto, and wife who have been spending a few weeks holiday in Florida, have returned home.

W. H. Wilson of Wilson Bros., Quebec and Woodstock timber merchants, passed away lately. He was well known in the trade and had been connected with the industry for many years.

W. B. Blair, of Blair & Rolland, Ltd., wholesale lumber dealers, Montreal, has been the recipient of many expressions of sympathy on the death of his wife, from pneumonia, after a brief illness.

Private D. W. Allan, of the Canadian Forestry Corps, has been presented by the city of Bath, England, with a silver watch and fifty dollars for saving two ladies from drowning. The presentation was made by the Major.

R. G. McWethy of the Gill-Andrews Lumber Company, Wausau, Wisc., spent a few days in Toronto recently looking into the hardwood situation with a view to establishing direct connection for his firm in Ontario.

Brigadier General J. B. White, who was in command of the operations of the Canadian Forestry Corps in France, has actively resumed his former duties as manager of the woods and lumber department of the Riordon Pulp and Paper Co., Montreal.

Hon. William Currie who has been Speaker of the New Brunswick Legislature for the past two years, has resigned. Mr. Currie is vice-president and manager of the Continental Lumber Co., River Charlo, N.B. Dr. J. E. Hetherington, M.L.A. for Queen's, is the new Speaker of the N.B. Legislature.

Sergt. Bryon T. Barlett, who has served in one of the Gas and Flame Regiments in France, and seen active action since July 1st, 1918, has taken up his old work of timber cruising for the James W. Sewall office at Old Town, Maine. Sergt. Barlett was given the Croix de Guerre for bravery in action while in France.

Wm. Henderson of Toronto, superintendent of the Shanty-men's Christian Association, has returned from an extended trip to the Pacific Coast. He also visited Michigan, Minnesota and other states in the interest of the work which he reports is progressing favorably. Branches have been established in British Columbia with promising prospects.

James A. Connors, J. D. Latno, L. T. Calhoun and Bryon T. Barlett of the Sewall office, timber cruisers, Old Town, Maine, have gone on an extensive pulpwood cruising job in the Gaspé Peninsular, P.Q. They expect to get labor there to help them and to finish the careful mapping and estimating of some 40,000 acres of land before the spring breakup. They report that the weather in that section is not cold, but that there is five feet of snow at present.

Major J. I. Hartt, M.P.P., of Orillia, who attended the annual meeting of the Orange Grand Lodge of Ontario West in Woodstock recently, was re-elected Grand Master for the coming year, being returned by acclamation. Major Hartt, who is a well-known lumberman and took an active part in the operations of the Canadian Forestry Corps in France, has been a member of the Orange Order for many years. It was decided to hold the 1920 convention in Orillia which is Major Hartt's home town.

Wm. Rutherford and J. P. Dupuis, of Montreal, were in Toronto recently attending a meeting of the eastern members of the National Council of the Association of Canadian Building and Construction Industries. They called at the offices of the Ontario Retail Dealers Association to make some enquiries, on behalf of the retail lumber trade of Montreal, into the operation of the Lumbermen's Credit Bureau, with a view to establishing a similar service in Montreal in the near future. The Secretary was invited to go to Montreal at

an early date and explain the plan more definitely to the members of the retail lumber trade in that city.

Brigadier Gen. J. B. White, D.S.O., director of the Riordon Pulp and Paper Co., has been made an officer of the Legion of Honor of the French Republic for services rendered the Allies armies whilst commanding the Canadian Forestry Corps in France and as director of timber operations in France. Brigadier Gen. White, prior to the war was in command of a squadron of the Duke of York's 17th Hussars. When it became necessary for England and France to obtain experts in forestry makers, Gen. White went over as major in the 224th Battalion, subsequently returning to Canada, and again going over again in command of the 242nd Battalion. In 1918 General White was appointed director of timber operations in France and deputy director for the British armies. He was awarded the D.S.O. in the 1918 New Year's honors and was made Brigadier in November last.

Capt. George Reid Returns to Canada

Capt. G. T. Reid, D.F.C., Toronto

Capt. Geo. T. Reid, who is a son of John B. Reid of Toronto, vice president of the Ontario Retail Lumber Dealers' Association and former chairman of the Lumbermen's Section of the Toronto Board of Trade, has returned home from overseas' duty. Capt. Reid is looking fine and is none the worse of his many thrilling experiences abroad. Previous to enlisting, Capt. Reid who is 23 years of age, was associated with his father in the lumber business. In the fall of 1916 he recruited C Company of the 242nd Forestry Battalion and picked up nearly 300 as fine specimens of lumber-jacks as could be located anywhere. After some months in forestry operations in England and France Capt. Reid joined the Royal Air Force and was attached to the 69th Squadron. In October last he received the D. F. C. (Distinguished Flying Cross) in recognition of his splendid work and shortly after he was commissioned a flying captain, although he already had this rank with the Forestry Corps for some months. At the time he was awarded the D. F. C., Capt. Reid had served in the air for only six weeks. He had gone out with a party of ten other machines on a night bombing expedition over the Rhineland, but they were sighted by the Huns, who brought down plane after plane. When Capt. Reid returned to the airdrome he found that his was the only machine of the party that had returned. His many friends in the lumber industry are pleased to welcome him home after his stirring experiences abroad.

Bulletin Explains Measurement of Lumber

A recent bulletin, entitled "Important Facts About Canadian Tree Species," issued by the Forestry Branch, Department Interior, defines the unit of measurement of sawn lumber in Canada, and also in the United States, the board foot.

"One board foot," the bulletin states, "consists of a piece of lumber one foot square and one inch in thickness. When applied to inch lumber, this unit may be considered a measurement of surface, but with lumber of other dimensions it is a unit of volume containing 144 cubic inches. A few examples will explain this more clearly. A board 12 feet in length, 1 foot in width and 1 inch in thickness contains 12 board feet and its surface measurement is 12 square feet. A board 12 feet long, 12 inches wide and 2 inches thick contains 24 board feet, while its surface measurement is still only 12 square feet."

Will Control Waters in Lake of Woods

In order that there may be sufficient and proper conservation and control of the waters of the Lake of the Woods, in the interest of navigation, and of other interests, it has been decided by an order-in-Council to create a board of control representing and acting for the Government of the Dominion of Canada and the Province of Ontario.

It is known as the "Lake of the Woods Control Board," and the Dominion has named W. J. Stewart, hydrographer for Canada and consulting engineer for the Department of Exterior Affairs, and J. B. Challies, superintendent of the Dominion Water Power branch, Department of the Interior to represent the Dominion.

Good Effect of Men Getting Together

Eastern and Western Lumbermen Now Understand Conditions
Better as Result of Recent St. John Session

A correspondent of the "Canada Lumberman" writing from St. John, N.B., gives some interesting impressions of the recent C. L. A. convention in that city. He reviews present manufacturing conditions and outlook paying particular attention to the portable saw-mill man. He says:

The Canadian lumbermen from Quebec and the Middle West have come and gone. What the results of their visit will be, remains to be seen. It was the first time in history of the lumber trade, when lumbermen so far removed from one another have met together to discuss their different troubles, and to try to the best of their ability to make things easier for general trading on the line wherever they do business. As yet no results have come but they left us with the best of impressions of themselves and it is to be hoped they carried away a good impression of their Eastern friends.

No sales of any kind were made between the visitors and their Eastern friends, but they of the Middle West have found that we are getting our portion of the British trade as many of the operators in the East had closed up for their 1919 cuts of mills and at fairly good prices. No consideration was given at these meetings to our supposedly smaller friend, the portable mill operator, who if it were figured up in the aggregate, would no doubt out-run the larger manufacturers of wood goods. They are the parties who must in the near future be reckoned with, as it is a well-known fact, that they have a large part in the settling of the prices for deals, etc. As the cut of the portable mills this year is greater than for many years past they are today coming into first place as far as profitable manufacturing is concerned. They get right close to the forest. Their milling plant is not nearly as expensive, overheads are normal, driving expenses are cut out and while they do not manufacture as closely as stationery mills, they do not handle any waste, and are able to cut smaller trees and clean the ground ready for a farm if necessary. These mills today are running longer hours, under less pay, less taxes and getting within \$3 to \$4 per M. as much as the city mills. Our trade journals who ignore them make a vast mistake and in the future the big mills will be a thing of the past and what we call our portable mills, will take their place.

Largely Bought up by the Brokers

A rough estimate of the larger and the portable mill outputs for this year would be in the vicinity of 400 million feet and this has now largely been bought up by the brokers. Especially does this apply to the smaller mills. All that is needed is to get the drives down to the larger mills, the mills to be put in operation and stock shipped. No doubt before long, all selling restrictions to the British Isles will be lifted and free trading will take place.

The first of March saw about all logs hauled off yards and landed on the banks of the streams. While the costs are much greater than a year ago, still it has been a much easier winter to operate and the costs will not be near as high as first estimated. Much now depends on rains for the spring drives. Snow is not plentiful, in many places there is very little indeed. The logs through New Brunswick and Nova Scotia will on a whole be smaller in size than of late years and will therefore produce a much smaller or narrow specification.

Freights are going off and will no doubt get close to normal before the end of summer. Vessels are closing for South America at \$40.00 and will probably take less as the shippers are holding off. The mills at St. John hope to begin operation by the first of April. Just how many plants will be in operation cannot at the present be told.

No Chance for Lowering Prices

Local demand for lumber is at a stand-still. The outlook is not encouraging although the writer cannot see any chance for lower prices for the future. Stumpage for standing timber remains firm and the owners can afford to let it grow. The charges for getting logs will not be so materially reduced as to warrant any reduction. The cost of sawing will remain equally as high and as long as living keeps to its present costs, we cannot expect much lower rates of wages. The western mills of British Columbia have been selling at a loss for years and with 25 per cent. more freight to pay than before, the prices of western fir products will not be even as low as Eastern spruce at present prices. How then can lumber prices be reduced? Can any writer answer it? We certainly would be glad of his reply, giving facts to prove that they will. The American market is dead, and no offers for eastern stock are being received. Lath are flat, shingles are good and will no doubt hold their present prices and probably advance as cedar is very scarce.

Demand for Railroad Ties is Very Good

The Canadian Tie & Lumber Company, Ltd., who recently removed their offices to the Temple Building, Toronto, are extensive dealers in pole and squared ties in which line they specialize exclusively, having large contracts with a number of Canadian railways. They also handle piling, fence posts and lumber. The company was organized in October, 1917, with J. M. McCandless as president, Wm. F. Hoey as vice-president and George F. McCandless as secretary-treasurer. J.M. and George McCandless are also members of the firm of McCandless Bros., of Detroit, Mich., where large operations in the railroad tie line have been conducted successfully by them for many years.

The Canadian Tie & Lumber Company buy ties in many parts of Canada which consist of cedar, tamarack, hemlock, jack pine, red

Peeling cedar fence posts in the Bay City, Mich., yard of McCandless Bros. The woman in the picture keeps up with her husband by peeling 200 posts a day and prepares his meals as well

pine, beech, birch, maple, ash and second growth elm. They also handle timber for railroad work and other requirements. In purchases made by the firm it is stipulated in the specifications that the bark must be removed from all ties with the exception of tamarack and pine. The face of the ties ranges from six to ten inches and the thickness from six to seven inches while the length is eight feet. All hardwood and jack pine ties are creosoted. The company in their operations also supply fence posts and piling of all kinds. They report that the prospects in the railroad tie market for the coming season are promising. With the extensive construction work which will be carried out now that the war is over, the demand for their lines should be very large.

The Dominion Shingle & Cedar Co., Ltd., Pacific Building, Vancouver, with mills at New Westminster and Eburne, have opened a construction department under the guidance of F. L. Johnson, who has been building and operating saw and shingle mills in B. C. and Washington for the past thirty years. Mr. Johnson has just remodelled a modern eight machine shingle mill at Eburne for this company.

The modern Port Alice plant of the Whalen Pulp & Paper Co., Ltd., Vancouver, located at Port Alice, West Coast of Vancouver Island, is now receiving its finishing touches and will be manufacturing seventy tons of pulp daily in the near future. It is expected that over 800 men will be required for the various operations, including logging and sawmilling.

Lumberman Who Possesses Public Spirit

J. G. Morningstar,
The lumberman warden of Welland

Jesse G. Morningstar, who was recently elected warden of Welland County, is a man of public spirit, and has spent eight years in municipal life, four as councillor and four as Reeve of Willoughby Township. He resides on Welland R.R. No. 4 and for the last fifteen years has been engaged in the lumber and timber business. For a considerable period he hauled logs to the mills that were conveniently located and had them cut to order. In 1909 he purchased a saw mill of his own which he successfully operates and last year he acquired a portable mill. Ship timber and construction work has been his specialty.

Speaking of his election to the highest office in the gift of the county the Welland "Tribune," in a recent edition, paid him the

following tribute, which will be read with interest.

"J. G. Morningstar, Lumber Merchant," perhaps there is no phrase better known throughout the county than that. Jesse Morningstar, while building up for himself one of the most prosperous businesses in the county, built for himself a personal popularity, that many a less altruistic politician might envy.

When a young man he embarked upon an enterprise the magnitude of which, even at that time, would have deterred any but the most aggressive and determined from undertaking. His first saw-mill in Pelham township was the foundation of his fortunes—and almost became the ruination of his hopes. Built under the most trying circumstances, the first year's run being calculated to pay off most of the cost of construction, the mill had scarcely got under way when it was threatened with fire. In fact it did catch fire and only hard work of Mr. Morningstar and his men prevented the flames from doing more damage than the burning of the roof over the boiler room.

Warden Morningstar's heart, we can imagine missed a beat; but with fresh determination he went to work and his labors were to such good effect that today he owns two of the most prosperous mills in the country in addition to the excellent farm upon which he resides in Willoughby township.

The Warden says that his success has been largely attributable to the ease with which he has always got on with the men who have been engaged with him. But we suspect that his shrewd business abilities contributed largely to the growth of his fortunes.

At any rate, the same qualities that brought success to his business, and personal popularity to himself, have landed him in the Warden's chair; and the efficient and expeditious manner in which he conducted the inaugural session of the 1919 council bears witness to the fact that Warden Morningstar will apply all the experience he gained in his private enterprises to the successful discharge of the duties imposed upon him as head of the county's parliament.

A Talk About Future Lumber Prices

"There are people to-day—as in the old boom times—who think prices are going to stay up at the present high level to which they were artificially forced by war," said Mr. R. P. Shannon, of the R. P. Shannon Lumber Co., Vancouver, to the "Canada Lumberman." "They even think—some of them—that prices should continue on an ascending scale. Such an attitude is quite illogical. What happened at the conclusion of past wars will happen now. The peak has been reached and future changes must be on the down grade, with possibly a stiffening in the spring."

"But you don't surely look for bad times ahead in the lumber industry?" we asked.

"No," he replied. "Do not misunderstand me. I said that, in my opinion, prices are bound to come down—and they are actually on the decline now, and have been since the armistice was signed. But they can come down without interfering with profits if they do so gradually and if the cost of production declines at the same time proportionately. There has been a good market for special cutting in the way of ship timbers, etc., but other lumber has been produced in excess of the demand, due to the abnormal quantity of high-grade stuff called for, the resulting accumulation of side lumber, and, on top of that, the falling down of the prairie market. However, salvation lies in the reported enquiry by the British Government for Can-

adian timber and lumber. The mere enquiry is having an excellent psychological effect; and if substantial orders come from it—of which I feel confident—then a large percentage of our output will be adequately protected as to price. The lumbermen can easily look after the balance themselves."

We mentioned the fact that a number of Vancouver millmen were thinking of getting together and establishing an assembling dock for their mutual benefit and protection, if the Government's plans for the harbor do not allow for one.

"Such a dock might help considerably," said Mr. Shannon, "in the way of stabilizing conditions by giving mills whose only market now is the interior 'another string to their bow.' Any such means to legitimately maintain a fair margin of profit should be carefully investigated, and, if found practicable, adopted in a co-operative spirit by Coast lumbermen."

The conversation then turned on wooden ships.

"In my judgment," said Mr. Shannon, "it wouldn't be safe to bank too strongly on business from this source after the ships now under contract are finished."

"And what is your opinion as to the future of steel shipbuilding at the Coast?" we asked. "Do you agree with Mr. J. J. Coughlan that it will continue at its present rate for about three years and then die out completely?"

"I don't know anyone better qualified to speak on the subject than Mr. Coughlan," he answered. "I would certainly accept his judgment as freely as anyone's. And what he says is quite reasonable. How can we hope to compete successfully as steel shipbuilders when the necessary materials (plates, etc.) have to be conveyed to us over great distances at heavy expense? We would be laboring under a hopeless disadvantage in competition with yards located close to steel foundries."

We referred to the number of recent articles advocating the establishment of a steel manufacturing plant in the province, and we ventured the opinion that there was an abundant supply of eminently suitable ore at hand.

"There seems little doubt as to the ore," he agreed, "but it would take an immense capital to establish a steel plant here, and it is extremely questionable whether it could be made to pay at present. Shipbuilders alone could not take the entire output. There would have to be a market for the by-products. However, all these things come with the development of the Pacific Coast, and no doubt agitation in the press will help."

"But," we said, "don't you think the Government should at once assemble all the facts so as to be in a position to say authoritatively to prospective capitalists what commercial possibilities lie before the steel industry in B. C.?"

"Undoubtedly such information should be more readily available," he agreed again. "But, anyway, we don't need to worry very much about the future of our shipbuilding. Of course, it would be fine if it could be kept up indefinitely; but even if it lasts only for another few years it will have served a good purpose and helped lumbermen and others through difficult times. Much is going to happen in three years. New opportunities will spring up. I'm not a bit pessimistic as to the future—quite the contrary."

Shingle Manufacturers Elect Officers

At the annual meeting of the Shingle Agency of British Columbia, Ltd., held in the association rooms, Standard Bank Building, Vancouver, the following officers were elected for the current year:

President, Aird Flavelle, of Thurston-Flavelle, Ltd., Port Moody.

De Boss, Well He Say, "Caspar, You Save a Life"

He Call at de Chantier on de way Back from de beeg Lumberman Meat at St. Jean for see How Tings she go on de bush—Nudder dark feller wit him

Editors Lumberman Canayenne:

You member few wik ago you write an ask me go on St Jean for Lumberman Meat, an Im tel you Im not go but de Boss shes gone tel me all about it. Wel, Im right dat tam for de Boss hes come on ma camp on de way back. He say he come for see how de tings she go on de Bush, but Im tink shes lose hersef an wake up on ma camp.

Im have telephome on de camp wat are veree handy sometam, ju couple telephome wit de line on de tree, an Im get telephome bout 4 clock on de afternoon wat say de Boss come on de camp dat night an for have good supper for him.

Im know wat she want before supper, an have plenty on leetle jug on ma valise, wat are kip for Visite. De Boss get off de sleigh on tam an he have nudder feller wit her wat look lak injun, for he veree dark on de skin an bout so beeg as me but he have de good close on her.

Wen Im get dose two fellers on de office were Im have ma bed an tak der coat an hat an hang heem up, Im ope de valise an presen ma respec.

De Boss he say "Caspar, you save a life," but nudder feller he not say nuttin, only mak a grab for de jug. He mak me tink mebbe he been police in Toronto one tam.

Anyhow, we have leetle tonic an den we go on de cook-camp for eat.

De cook hes spread hersef an have plentee good grub for chantier, but de chantier mans have good chance for pick up de good ting wen de Gared de Chasse ar not aroun, an we have few trout an nice piece de crevrau, dats deer, an few nudder ting wats mak dose feller tink day are still on de Royal Hotel on St. Jean.

Dey begin on pea-soup and feenish wit preserve blueberry wat ma wife have provide for me. Dey try everything wit sample an den place big order. Dere wer no rejets an de grade wer O.K.

After we finish de eat we go on de office an Im prepare mesef for hear al bout dat Meat but dose feller dey laff an tel de storee an smoke de cigarettet an after wile Im notis dat yankee mans look on ma valise pretee hard an den Im nudderstan wat hees have on her eye, an Im ope de valise.

It tak me mos coupla hour get dem on der bed an dey slip togedder on de clerk for Im chase de clerk on de chantier for mak room for de Boss.

Den Im tink we gone have good slip an talk de beezness on de morning but dose feller talk on der slip de mos foolish talk Im never heard.

One feller he say "seventy dollar on 12 cent rate, New York," an nudder feller say "Do de refinery cause you be so sweet." Den de Boss he say "Who are your fren?" an he laff a little an say agen "it mus be de fog wat mak so lovely complexion," an dats de-way dey kip her up for mos a hour before Im gone slip.

Im wake up agen wen dose feller begin snore an nudder feller sware on heem, but wen dey bot snore togedder Im slip wel for it mak me tink Im on de drive an camp on de foot de Rapide des Chien.

Bout 5 clock on de morning Im get up for mak de fire but try for not mak much, wen Im hear one feller mak awful noise wit his throat an Im go look for see if hees not near die. He not dead but he wisper few word on ma ear an Im ope de valise agen.

De dark feller he feel better now an he say "page Mister....." dats ma Boss, an he wake up an say "hell" coupla tam lak he try for say Halifax but forget, an he shake her head an get up an go look on de miroir.

Wen he look hesef he let beeg yell wat shake de office an Im run for see wat are de matter, for he point hees mout an stagger roun de place. Hes scarce me leetle for bout a minute for hees mout an teet are black, an den Im laff an tel her de preserve blueberry wat are mak by ma wife Glorrianna never kil nobody yet, but mak de teet black for leetle wile. Den dey bot laff.

De valise shes begin feel leetle light but we have nff lef for tonic before breakfas, an after breakfas de Boss he say "Im be down here in few wik, Caspar, an den Im tole you al bout dat Meat on St Jean."

An den dey get on de sleigh an de Boss he say to nudder feller "You de worse injun Im never see" an fer more word Im not hear veree good for dey are driv away an wave der han on me. Im glad de Boss have say nudder feller are injun for Im tink so mesef, but he are pretee good injun too for coupla day ago Im get leetle box

from Montreal wit de cigar an someting else on it, an Im place dem on ma valise were de leetle jug are not now.

Bien a vous

Caspar Lamarche.

Lac au Loup, Que.

A Live Wire at the St. John Convention

At the recent successful convention of the Canadian Lumbermen's Association held in St. John it was the unanimous expression of every visitor to the great gathering that the arrangements of the local reception committee, of which J. Fraser Gregory was chairman, were admirably carried out. The entertainment provided for the delegates surpassed any previous efforts in connection with the annual assembly. The reception, luncheons and pleasure jaunts were thoroughly enjoyed and a hearty invitation was extended the guests to come again, with the promise of an even better time on the next occasion. Mr. Gregory was ably assisted in the programme arranged by Messrs. F. C. Beatteay, W. E. Golding and Hugh MacKay, St. John, the portraits of whom appeared in last issue of the "Canada Lumberman." They agreed, however, that the bulk of the work had been borne by Mr. Gregory, who was styled at the luncheon by one of the committee men as the "President, General Manager and Secy-Treas. of the whole affair." This Mr. Gregory modestly disclaims, and states that if it had not been for the co-operation and good-will of his local associates much that was accomplished would have fallen by the wayside.

J. Fraser Gregory,
Dean of St. John lumber industry

Mr. Gregory, who is president of Murray & Gregory, Limited, as well as the St. John River Log Driving Co. and director of the Madawaska Log Driving Co., was born in Fredericton, the capital city of New Brunswick, being a son of the late Hon. George Frederick Gregory. Educated at the Fredericton public schools and New Brunswick University, for some years he studied law but gave up that profession before admittance to the Bar. He then entered the lumber line and was with Murray and Barnhill for eighteen years, and was admitted to partnership in 1899. The firm became a limited liability company under the name of Murray & Gregory, Limited, in 1904, and on the death of Mr. Murray in 1906, the subject of this reference became the President and General Manager of the organization. The concern operate large and well equipped saw mills at St. John, N. B., and Lake Frontier, Que., and manufacture everything in wood as well as glass for buildings and also handle pulp wood, railway ties, etc. Mr. Gregory has been so long and prominently identified with the lumber industry of his native province that his activities are widely known. He has always taken an aggressive part in the weal and advancement of the timber trade. Outside of his busy business associations he is fond of motoring and yachting and is a former Commodore of the Royal Kennebecasis Yacht Club and President of the New Brunswick Forest, Fish and Game Association. He served with the 71st Battalion Infantry from 1870 to 1880 and holds a second class Military School Certificate. Mr. Gregory resides at 297 Douglas Ave., St. John, and has a summer home at Mildegeville, N. B.

For the purpose of assisting in the work of fire prevention, the Federal Government has retained the services of J. Grove Smith, late of the Conservation Commission, Ottawa. Mr. Smith has been appointed to the staff of the Department of Insurance and will act in the capacity of Dominion Fire Prevention Commissioner in co-operating with the Provincial Fire Commissioners and fire marshal of the municipal authorities.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Summary of Cranbrook Unit

Red Fir	5,824,000 ft.	10%	Tie timber
Tamarack	41,236,000 ft.	72%	Tie timber
Yellow Pine	609,000 ft.	1%	
Balsam	631,000 ft.	1%	
Spruce	1,448,000 ft.	3%	
Jack Pine	7,592,000 ft.	Tie timber
Cottonwood	15,000 ft.	

57,355,000 ft. 100%

Mining Props 311,610
Average stand per acre, 8,390 ft. B.M.

Summary of Lamb Creek Unit

Red Fir	1,353,000 ft.	1%	Tie timber
Tamarack	18,318,000 ft.	19%	Tie timber
Red Cedar	633,000 ft.	1%	
Hemlock	276,000 ft.	—	
Spruce	46,180,000 ft.	49%	
Balsam	10,395,000 ft.	11%	
White Pine	1,758,000 ft.	2%	
Jack Pine	15,935,000 ft.	17%	Tie timber
Cottonwood	4,000 ft.	—	

94,852,000 ft. 100%

Cedar Poles, 2,480. Mining Props, 375,230.
Average stand per acre, 12,820 ft. B.M.

The above timber on account of its nearness to the prairie provinces has in the matter of freight a decided advantage over Coast timber, in some cases enough to pay mill cost of manufacturing.

PLAN BOOKS

Among Building Prospects

What most retail Lumber Merchants lack is an interesting medium of carrying their service message to the people. The most effective medium and proven efficient method is an Attractive Plan Book, PUBLISHED OVER YOUR OWN NAME.

KEITH SERVICE

makes the opportunity for every Building Material Merchant to put out HIS OWN PLAN BOOKS at a ridiculously low expense and the first step is to send for a sample set of these books.

KEITH CORPORATION,
Abbey Bldg., Minneapolis, Minn.

We are interested in your Plan Book Advertising idea. Without any expense to us, send your sample set of 3 plan books.

Review of Current Trade Conditions

Ontario and the East

There is not much new to record in the general situation so far as the demand for lumber is concerned. Mill culls are moving freely in pine and hemlock, but other grades are quiet. As spring approaches the prospects for building loom up brighter and there is a notable increase in the number and value of permits issued in each large centre. This indicates that structural operations will be carried on to a pretty fair extent. The feeling that there is going to be a drop in prices is disappearing, although in one large city it is reported that certain retailers, in order to stimulate business have been cutting the price \$5 and \$6 on white pine. Such a move is not likely to blow good to anyone and will result in the lumber merchants throwing away profits which they should have as a solace for the quiet state of affairs during the past few months.

It is said that the only way to convince certain business men is through the medium of the pocketbook. In other words, they must really experience a loss or suffer some sort of reverse before believing that any move, against which they are counselled, does not pay. After bitter experience, these self-same individuals will quietly observe that the admonition handed out was right after all, and that a price-slashing campaign always has a boomerang effect.

The number of enquiries is increasing, but there is still a disposition on the part of large buyers to hang back and only a moderate amount of stuff is moving for immediate requirements. Basswood is very scarce and commanding a good figure while the quotations on other lines are holding well, everything being considered. Railroad and traffic conditions are good and there are no embargoes at the present time. On the other hand there are no large shipments except some consignments which are going forward to the Old Country.

There is little need for extended comment in the present issue on the market as the whole lumbering situation in Ontario and the East is pretty well covered in connection with the review presented in the statistical pages. The comments of a number of representative firms are also given and they show that the cut will be from 20 to 30 per cent smaller in some parts than it was a year ago while there is likely to be an increased demand for all kinds of wood goods. This augmented requisition may not set in at once, but it is bound to come before many weeks. Export will stimulate it and those who have fair sized stocks, are not worrying about the outcome. They feel that prices are bound to be maintained and in some cases advance considerably.

The past fortnight has been very favorable toward getting out the timber and everything in connection with logging operations is moving along satisfactorily. If there had been sufficient labor available at the beginning of the season no doubt remains but this year's cut would have equalled that of last winter. The experience of numerous logging concerns with the help problem was so unsatisfactory and so many difficulties presented themselves that not a few of the operators, thinking that the war would go on another year, decided to cut down their camp activities as much as possible. Then came the sudden end of hostilities in Europe leaving the lumberman in a quandry. He did not know whether to increase or further decrease his cut, but after viewing the situation calmly and taking cognizance of all the factors both pro and con many have concluded that it is a good move on their part to get out more pieces than they at first anticipated.

The production of lumber has been decreasing from year to year ever since the outbreak of the war and this statement is not an idle one. All that any reader has to do is to turn over the editorial pages of this edition of the "Canada Lumberman" to the statistical section and he will there find convincing evidence that the reduction is greater than he possibly imagined. Figures do not lie and these returns are convincing evidence of what has been stated in the "Canada Lumberman" from time to time about timber activities steadily minimizing with each successive season.

However, the future is bright with promise and the effects of the war are being overcome gradually, but confidently 1919 should after all be a good year for the Canadian lumbermen if the export trade comes up to anything like its most sanguine supporters look forward to.

The housing plan by the Ontario Government is making progress and the Quebec Government is taking similar action while the federal parliament will do all in its power to give the campaign of

erecting dwellings a boost. The details will be published in these columns as soon as the measures which are being subject to amendment in their various readings are finally approved.
